

40,000 Y. T. H. F.

Raleigh, March.—Almost 40,000 young Tar Heels have received training for future vocations, subsistence for themselves, allotments for their dependents or relatives, mental and physical advantages and opportunities, and many other benefits from enlisting in Civilian Conservation Corps camps in North Carolina during the last five years, according to T. L. Grier, State Superintendent of CCC Selection.

Grier, who has been associated with the selection division since the beginning of the program in April, 1933, thinks that the value of the CCC cannot be measured in terms of dollars and cents, but is emphatically confident that thousands of North Carolina youths have been given a new lease on life through their connection with the camps scattered throughout the state.

"I could tell you of many instances where young men, frequently downhearted and dispirited because of their inability to obtain work," Grier said recently, "have come to us and enrolled in the CCC and recovered their self-respect, in addition to earning their livelihood and living in an atmosphere that tended to improve their mental, moral, physical and spiritual attitudes. That is why I take so much interest in my work. It is a real pleasure and privilege to have a part in rehabilitating our young men, and in seeing them fit themselves for the battles of life."

"I am very happy over the fact that President Roosevelt recently has intimated that the CCC will become a permanent part of the national government," Grier continued. "I can't conceive of anything that has been of more real benefit to our young than that program. During the depression years, thousands of them were roaming the roads and highways of our country, desperate because of their inability to obtain work. Now, all that is changed for the young man who really is honest and wants to earn his own livelihood and prepare himself for better things."

The United States Department of Labor, the North Carolina State Board of Charities and Public Welfare and the 100 local departments of Public Welfare, which act as selecting agencies, are interested primarily in the proper selection and certification of qualified applicants for enrollment in the CCC, Grier said. The United States Department of Labor is responsible for many of the CCC functions, with the approval of the Director of that agency.

The State Board of Charities and Public Welfare has been designated by the United States Department of Labor as the state selecting agency, and its Commissioner, Mrs. W. T. Bost, as the State Director of Selection. Grier directs the selection process and sees that the selection procedure is uniform throughout the state. The Supervisor of CCC Selection transmits instructions from the Department of Labor to local selecting agencies, receiving state requisitions after they have been cleared by the Department of Labor and the War Department, apportioning state requisitions among the several counties, receives reports from the local selecting agencies, transmits reports to the United States Department of Labor, maintains adequate records of active and discharged enrollees, makes recommendations on requests for changes of allotments, and co-operates with the federal, state and local agencies in performing his duties as Supervisor of Selection.

"I don't know of any other work in which I would be more interested," Grier said. "It has been my

privilege to talk to many young men who have made good in our camps, and I am hopeful that the CCC program will benefit a great deal more."

CARD OF THANKS

We take this means of expressing our appreciation to friends for kindnesses shown us during the long illness of the late E. H. Bunn and at the time of his death. Gratefully,
Mrs. E. H. Bunn and Children.

Corinth-Holder

Mr. and Mrs. Archie Hinnant of Middlesex, visited A. G. Wilder and family Sunday.

Misses Hazel Richardson and Rachel Cope, both of Raleigh, spent the week end with relatives.

Mrs. Helon Maydon of Moore's School House, spent part of last week with her daughter and family, Mrs. L. T. Davis.

Among those visiting J. T. Davis and family Sunday were Messrs.

Wade Davis, Douglas Hocutt and their families of Rock Ridge.

D. M. Green spent Sunday afternoon with his son, Durwood in Raleigh.

Miss Ella Mae Strickland of Antioch, spent the week end with Miss Betty Green.

Mr. and Mrs. J. E. Carter have returned to this community to live on Zebulon route 1.

Those sick with measles are: two of Walter Boyette's children, Kirkman Richardson and Son, J. B., Thomas Fowler's baby.

R. F. C. RESUMES LENDING

Washington, D. C.—Jesse Jones, Chairman of the Reconstruction Finance Corporation, announces that this Government agency is prepared to make loans to industry to the extent of \$1,500,000,000. At the same time, it is believed that applications will be made for only a small part of this fund, since banks are overloaded with surplus cash and few industries except railroads are in need of Federal support.

"I USE 8% POTASH FERTILIZER AND TOP-DRESS WITH NV SULPHATE"

... Says FRANK GALLOWAY,
Stantonsburg, N. C.

"THIS IS WHAT I GOT FOR SOME SAND LUGS"

"Four years ago I started using tobacco fertilizer containing 8% POTASH and top-dressing with NV SULPHATE OF POTASH at the first working," says FRANK GALLOWAY. "Since then I have not sold any tobacco under \$400.00 per acre nor fallen below a yield of 1200 pounds. Potash doesn't grow tobacco wild but gives it better body and better quality which means increased weight. The extra potash also reduces disease."

THE most profitable development in bright tobacco production in recent years has been the tremendous increase in the use of potash. Thousands of farmers have found that it pays to give their tobacco many times more potash than it received in the past. That's why such mixtures as 3-8-8 TOBACCO FERTILIZER have become so popular.

The Tobacco Research Committee now recommends fertilizer containing at least 6% POTASH to be used at the rate of 800 to 1,200 pounds per acre plus a side-dressing of potash equal to 120 to 240 pounds of SULPHATE of POTASH per acre, the side-dressing to be applied within 20 days after transplanting.

Your fertilizer man knows that potash is the quality-producing element in tobacco fertilizer—that tobacco is a potash-loving crop, removing from the soil more potash than both nitrogen and phosphoric acid combined. He can supply you with 3-8-8 TOBACCO FERTILIZER for use at planting and NV SULPHATE of POTASH for top-dressing. Use More Potash This Year! IT PAYS!

When you buy potash in mixed fertilizers or straight potash it pays to make sure you get genuine NV POTASH
