### TOO WEAK IS TOO DANGEROUS

Your pocketbook would be cheated if the suit you bought for 100 per cent wool turned out to be 50 per cent cotton fabric, or the ring you bought for gold was made of brass . . . but it might be a case of life or death if a drug your doctor prescribed was not up to standard.

Most people think of dangerous drugs in terms of over-dosage. Under-dosage however, can be even more dangerous, for its effect may not be recognized as promptly.

The physician knows the amount of drug which is needed to produce a desired effect, and when he writes a prescription he wants assurance that each pill, capsule or teaspoonful contains a known, definite amount of medication.

This assurance is provided by the pharmacist who fills the prescription. To him exactness and scrupulous care are fundamental. He knows the drugs which are liable to be adversely affected by improper storage, the drugs which deteriorate through age, the mixtures which must be freshly prepared before use. He has been trained in the art of compounding medicines, and the drugs he dispenses must meet definite standards of purity, strength and potency.

Such is the pharmacist's responsibility . . . and he takes his obligation seriously.—Reprinted from a copyrighted advertisement published by Parke, Davis & Company, Detroit 32, Michigan
