World's newest

V8

with a million miles behind it

HERE, in literal fact, is the most advanced V8 engine ever placed in a standard-production American automobile.

It is the first such V8 to reach an 8.5 to 1 compression ratio, and the first with a dynamic flow muffler that cuts power loss to zero.

It is the first V8 to utilize vertical valves together with a 12-volt electrical system instead of the usual 6. It is also the first designed with new "T" type intake manifold to replace the "Y" type conventionally used in V8s.

It is, quite simply, the first V8 Fireball Engine—the engine that brings electrifying performance to the greatest Buicks in fifty great years—the engine that powers the 1953 Buick ROADMASTER with 188 hp., and the 1953 Buick SUPER with up to 170.

Naturally, this spectacular new V8 has been proved—by eight years of developing, testing, improving, perfecting—

and by more than a million miles of driving through desert, mountains, cities and plains. Only then did Buick engineers mark it: *Released for Production.*

But these hard-to-please engineers gave these Golden Anniversary Buicks far more than new power.

They gave them, too, a still finer ride, more superb comfort, new braking power and handling ease—and a sensational new Twin-Turbine Dynaflo Drive* that adds new quiet and whip-fast getaway to absolute smoothness.

Nothing, we believe, will do more justice to your automobile dollars—or to your love of magnificent motoring—than a visit to us right now.

*Standard on Roadmaster, optional at extra cost on other Series.

Television treat—the BUICK CIRCUS HOUR—every fourth Tuesday.
