AN OUTRAGE.

There is no question about the truth of the report that a while man was marched through the streets of Winston vesterday chained to a negro. Superinten dent Spach and two white guards are responsible for this outrage on this white man and on the community. The board of county commissioners meets on the first Monday in January. We respect fully call their attention to this them for investigation and action Lefore making any further comment except to say we do not be lieve men of their standing will permit such a flagrant act of use less outrage to go unpumished.

The fiscal year 1897 8 was a record breaker for this country in the matter of foreign exports. Our agricultural exports amounted in cial operations of our government for the same year ended with a deficit over \$300,000,000, Evi dently there is a "screw loose" somewhere.

In 1880 the South made 289,816 | delay, tons of pig iron. In 1897 it made 1,796,712. In 1880 the value of the product was \$7,269,050. In 1897 the estimated value was \$26,-592,717. In 1880 the South's out put of coal was 3,756,144 tous, Last year it was 32,850,630 tons, and has exceeded \$25,000,000 each year

There was a deficit in the national finances last fis al year of \$38,000,000, and the estimates for the current year indicate a balance on the wrong side of over \$112,000-000. And this, too, despite the Dingley bill and the war taxes. The McKinley administration will go down into history as the "deficit administration."

The merchant with goods to sell should inform the people of the fact. And no better method of informing the people than by advertising in a good newspaper has cases of Piles being cured by this, than yet been devised, or ever will be. The people read the good newspapers, and therefore the advertisements in such papers are brought directly before their eyes.

Charlotte News: The most absurd charge made by Butler, Ramsey and Holton in their first wild exclamations after they came to, is that Col. Light and Artificial Fog.

The production of cloud by the action of uitra violet light was demonstrated at a sorree at the Royal society by C. T. R. Wilson. The beam from an arc lamp was focused by a quartz lens in a tube containing moist air free from dust. Ina few minutes a blue fog was seen to form in the illuminated cone, and this tog could be made to move by applying heat to the tube locally. When the ultra violet rays were cut off by a sheet of mica, no such formation took place, and it is therefore suggested that the small particles which give rise to the blue of the sky are produced by the ultra violet rays of sunlight absorbed in the upper layers of the atmosphere. - Engineering.

Two Pointed Questions An swered.

What is the use of making a better article than your competitor if you can

not get a better price for it?

Ans.—As there is no difflerence in he price the public will buy only the better, so that while our profits may be smaller on a single sale they will be much greater in the aggregate.

How can you get the public to know your make is the best? If both articles are brought promi nently before the public both are cer tain to be tried and the public will quickly pass judgement on them and

use only the better one.
This explains the large sale Chamberlain's Cough Remedy, The people have been using it for years and have found that it can always be depended upon.
