**Don't Lose Sight of the Food Value of Your Bakings**

Plain flour has a large amount of food value but it must be combined with good baking powder in order to retain this value.

Most self rising flours are not successful because they do not and cannot raise the bakings to the proper lightness. This means a certain loss of nutrition because they are heavy and hard to digest.

Every time you eat food that does not properly digest you do not get the full nutritional value—you are over-taxing your stomach. Nourishing and perfect bakings are what good health demands. The one sure way is—use pure flour and good baking powder.

If you want to find what thousands of housewives have learned—make some biscuits with self-rising flour—then make some with good plain flour and Calumet Baking Powder—notice the great difference. One trial will satisfy you. Your health demands that you make the experiment.

Those who know—millions of housewives, domestic science teachers, big hotels, restaurants, bakeries and railroads will not use anything but Calumet, the Economy Baking Powder.

Play safe—use Calumet and plain flour. It is the most economical and satisfactory, where light, wholesome and pure foods are desired.
