

Champ in Training

Jack Dempsey has started active training for future ring bouts. Here he is shown in his quarters at Los Angeles with one of his sparring partners. The champ has been displaying good form in his early workouts despite his long absence from the ring.

TYPESSETTING BY PHOTOGRAPH

British Inventors Say Their Machines Will Revolutionize Principles of Printing. London, Aug. 19.—Long experiments with typesetting by photography have been carried through to successful completion by two British inventors. They asserted today that they had perfected a machine which "will revolutionize the principles of printing in use since the time of Caxton."

NAKED MAN DANCES HIS WAY UP FIFTH AVENUE

Wanted to Take All Cops to Heaven.—Makes Them Dress as "Angels." New York Herald. A naked man found dancing along Fifth Avenue at 33rd street, heading for the Waldorf-Astoria Hotel, where, he said, he had an "appointment to meet the Lord," was taken in tow early this morning by Patrolman Martin Walsh, of the West 30th Street station. Walsh was on post at Fifth Avenue and 32nd Street when he saw a naked man dancing along the sidewalk at 33rd Street, singing a hymn and shouting, "Cleanse yourself and prepare to meet the Lord."

Different sizes of type are obtained by adjustment of the focus of the lens of the camera, which projects the master film on to the sensitized film. This process is automatic. A large variety of type will be available, as a single spool of master film three inches wide and two inches in diameter contains the equivalent of 2,700 fonts of type.

If the invention fulfills expectations it can be used with wireless telegraphy, so that a machine installed in one city can "set up" matter in other cities simultaneously. It is also predicted it will reduce the size of printing establishments and result in scrapping much costly composing machinery at a saving of millions of dollars in capital outlay.

Books and magazines, it is stated, will become cheaper and more beautiful because of the greater variety of types available and because the clearness of outline will be preserved by avoiding an intermediate process.

The inventors are J. R. C. August and E. K. Hunter, his brother-in-law, and they have been working on the machine for four years at the plant of Hiffe & Son, at Walworth. The machine is protected by seventy British and foreign patents, and business men representing large interests are already associated with the commercial exploitation of the invention. Hiffe & Son are one of the largest British publishers and are especially known for automobile and motorcycle trade journals. The head of the firm is a prominent member of Parliament.

STATEMENT BY DR. McCAIN

Patients Not Being Turned Out Because of Lack of Finances.

Sanatorium, Aug. 18.—Patients are not being turned out of the North Carolina sanatorium on account of lack of maintenance funds said Dr. O. T. McCain, superintendent of the institution, in a statement which he issued to the daily News tonight, but on account of lack of room.

Dr. McCain says that there are 140 people, who have tuberculosis in the curable stage, who are waiting to be admitted into the sanatorium and that there is a danger of this advancing into the incurable stage unless they are given the knowledge of how to take care of themselves in the sanatorium.

All arrangements have been completed by the International Brotherhood of Electrical Workers for its annual convention to be held in Seatons, Texas, by way of Tampico and Monterey.

Not until 1840 were matches successfully manufactured by machinery.

At the West 30th Street police station the naked man said that he had an appointment with the Lord, was soon to become an angel and had been appointed to take "all the cops in the city with him."

Patrolmen on reserve agree to become angels and they procured sheets from their beds. These they wrapped about themselves and the police station resembled a Klan meeting when Dr. Felter, of New York Hospital and Nurse Donohue, of Bellevue Hospital arrived.

The naked man was wrapped in a sheet and taken to the later institution, where he said he was Thomas F. Clark, a real estate dealer, of Richmond Hill Road, Staten Island. He said he gave his clothes to those in want along Broadway and distributed his money among the hungry.

Three Dangerous Elements.

Hohenwald, Tenn., Aug. 18.—Speaking here today at the annual Meriwether Lewis celebration, Brigadier General A. J. Bowley, commander at Fort Bragg, N. C., declared that there are three elements in the United States' population that are particularly dangerous to the country's institutions. These he enumerated as follows:

"First: The radicals, who openly preach bloody revolution, attempting the destruction of the country and the establishment of a communistic government, such as we see in Soviet Russia."

"Second: The socialistic element, who, though not preaching open revolution, attempt the overthrowing of our present government by political means."

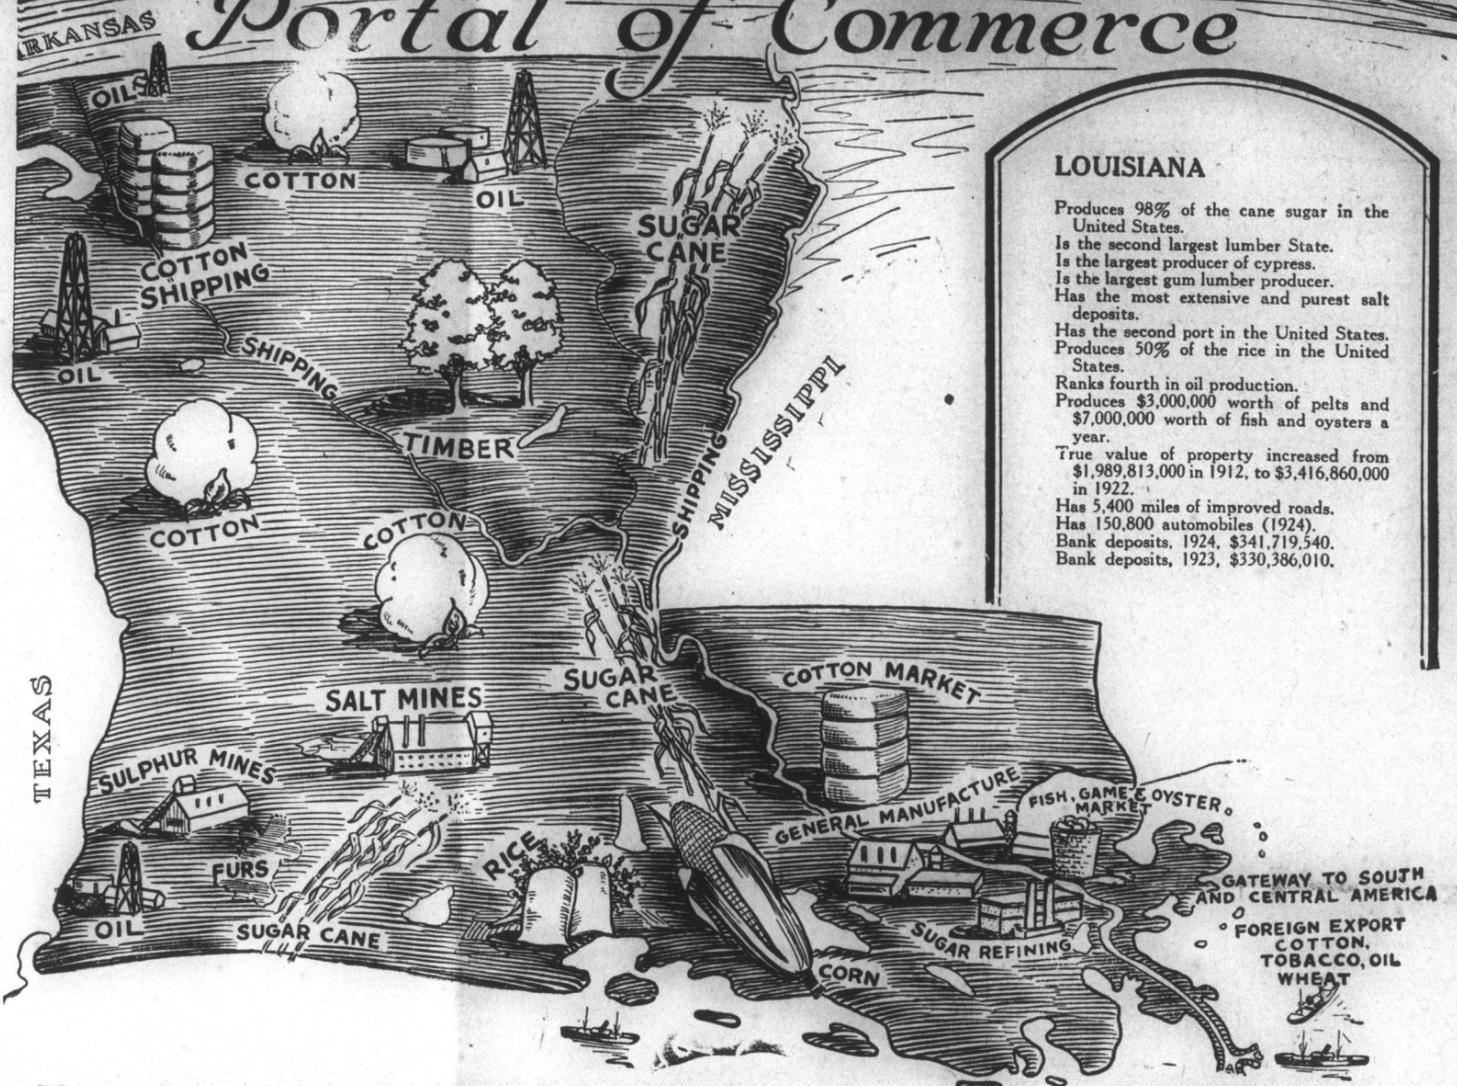

"Third: Well meaning but ill-advised people who fail to see the camouflage thrown over the true designs of these radicals and socialists, and who lend their aid in the radical and socialistic movements without realizing that in following such slogans as 'Law, Not War,' they are really aiding in the destruction of the great American constitution."

Caught Napping. First Doctor—"Tell me, Doc, have you ever made a serious mistake in a diagnosis?" Second Doctor—"Yes, once. I told a man he had a touch of indigestion. Afterwards I found he was rich enough to have had appendicitis."

Mexico's first long-distance telephone line, soon to be constructed, will connect the City of Mexico with Laredo, Texas, by way of Tampico and Monterey.

LOUISIANA

Portal of Commerce

LOUISIANA

Produces 98% of the cane sugar in the United States. Is the second largest lumber State. Is the largest producer of cypress. Is the largest gum producer. Has the most extensive and purest salt deposits. Has the second port in the United States. Produces 50% of the rice in the United States. Ranks fourth in oil production. Produces \$3,000,000 worth of pelts and \$7,000,000 worth of fish and oysters a year. True value of property increased from \$1,989,813,000 in 1912, to \$3,416,860,000 in 1922. Has 5,400 miles of improved roads. Has 150,800 automobiles (1924). Bank deposits, 1924, \$341,719,540. Bank deposits, 1923, \$330,386,010.

Why not sell our goods there? Consider what a rich purchaser she is. It was Louisiana's destiny to become a great portal, not only for the South, but for the Nation. 2,000 miles of coast line; 4,700 miles of navigable rivers, the great Mississippi running the entire length of the State—these give her the outlets she needs for her multiplicity of products, and the inlets for ours. The waters of the great river have touched 26 States before they wash by the docks at New Orleans, the second port of the nation. They bear not only commerce, but the rich alluvial deposits that have made the famous delta lands. Corn, cotton, sugar cane and rice are produced in enormous quantities. 3,000,000,000 feet of lumber come from her forests each year.

The surface of her lands is so rich that Louisiana hardly dreamed that untold wealth lay beneath, yet her salt mines have produced \$16,000,000 of wealth in twenty years. In a like time Louisiana has become the world's greatest producer of sulphur, \$119,000,000 worth having been mined. Then came petroleum, 24,000,000 barrels a year and an annual production of 60 billion feet of natural gas.

All the farm crops are produced in abundance in a climate that gives year-round cultivation. No wonder that Louisiana's assessed property value has increased 300% in ten years. This vast market, this great store-house of wealth is close by. Our own products can be sold there without great cost for transportation. Louisiana furnishes rail facilities and a splendid road system for our salesmen. She has the money to purchase our products and provides the machinery whereby we can sell them.

Louisiana's newspapers offer a quick and convenient means of letting Louisiana know what we have to sell. Why not use them?

Statistics

Population, 1923.....	1,849,746
Area, square miles.....	45,409
True property value, 1923.....	\$ 3,416,860,000
