

Insurgent Organization.

The insurgent republican organization which controls nearly all the important states west of the Mississippi is a vigorous one and now perfected is being extended through other parts of the country in an effort to defeat the renomination of President Taft next year.

It would be to the interest of the democrats to have Mr. Taft re-nominated because he could be defeated about as easily as any man in the republican party where as the nomination of a man like LaFollette of Wisconsin or Cummings of Iowa would cause more than a substantial fight by the Democrats, but, however, the democratic victory would be quite certain.

Is The World Growing Better.

Many things go to prove that it is. The way thousands are trying to help others is proof. Among them is Mrs. W. W. Gould of Pittsfield, N. H. Finding good health by taking Electric Bitter she has advised other sufferers. "For I have had with stomach and kidney troubles," she writes.

"I have tried many other remedies but they did not do me any good. Then I tried Electric Bitter and in a few days I was able to eat and sleep. I feel like a new woman now."

terial to contain 10 lbs. of nitrogen 5 lbs. of phosphate, and 14 lbs. of potash per ton. All of these constituents are taken from the soil by the roots, built into the tissues of the plant and giving out again to a succeeding crop when the rye decays.

A crop of green rye weighing eight tons to the acre is easily grown on the average farm in N. C. This amount of green rye incorporated with the first ten inches of a ten acre field would furnish to the soil of this field, in a readily available form, 800 lbs. of nitrogen, 409 lbs. of phosphate and 1120 lbs. of potash.

This is as much nitrogen as would be furnished by 20 tons of an 8-2-2 fertilizer or 100 loads of fresh cow manure. The phosphate in this amount of green stuff is equal to that contained in 21-1-2 tons of an 8-2-2 fertilizer or in 209 loads of fresh horse manure. The potash found in this material is equal to that found in 28 tons of an 8-3-2 fertilizer or in 150 tons of fresh horse manure. Sufficient rye to seed ten acres will cost about \$19, whereas it would cost \$75 to haul and spread the 150 tons of stable manure.

In the above we have mentioned only the plant food constituents contained in the green rye. It also contains a large amount of nitrogen and phosphate.

Like Mr. Roosevelt, Mr. LaFollette fully appreciates the impressive effect of an occasional silence.

John D. Rockefeller's ancestor came over here in 1723, according to a flower-bed.

Stomach Blood and Liver Troubles

Much sickness starts with weak stomach, and consequent poor, impoverished blood. Nervous and pale-people lack good, rich, red blood. Their stomachs need invigorating for, after all, a man can be no stronger than his stomach. A remedy that makes the stomach strong and the liver active, makes rich red blood and overcomes and drives out disease-producing bacteria and cures a whole multitude of diseases.

Get rid of your Stomach Weakness and Liver Laziness by taking a course of Dr. Pierce's Golden Medical Discovery—the great Stomach Restorative, Liver Invigorator and Blood Cleanser.

You can't afford to accept any medicine of unknown composition as a substitute for "Golden Medical Discovery," which is a medicine of known composition, having a complete list of ingredients in plain English on its bottle-wrapper, same being attested as correct under oath.

Dr. Pierce's Pleasant Pellets regulate and invigorate Stomach, Liver and Bowels.

NECESSITY OF ORGANIC MATTER IN THE SOIL OR GREEN MANURING—NO 9.

We have now attempted to explain the phenomenon called "souring of the soil" and to point out a practicable remedy, namely roll the green manuring crop; disc it a number of times in the opposite direction of the rolling while yet green and succulent in order to cut it into small bits; plow it under; disc it once or twice after plowing, depending on the amount of material on the land; with the disc set at a slight angle in order to pulverize and mix the cut-up vegetable matter with the whole soil stratum; and allow the land to settle a few weeks and receive one or more good rains.

We shall now take up in succession and discuss the value of a number of hums forming materials other than animal manured, and then point out methods of handling them in connection with different crops.

In a previous chapter we gave the average chemical analysis of a large number of samples of green

OXFORD COLLEGE,

OXFORD, N. C.

This school founded in 1850 has continued to grow more efficient and more popular as evidenced by its increase of buildings. It has four buildings instead of the one building destroyed by fire seven years ago. These buildings are only two stories high, and stand 30 feet apart. The sleeping rooms are on 2nd floor. The glass rooms are on first floor. This arrangement secures absolute safety in case of fire, and is the most healthful possible.

These buildings have complete water system, electric lights, and steam heat. The furnishings are new and complete. Specialists are at the head of all Departments, and represent some of the great Universities, Colleges, Conservatories and Art Schools of the land.
