There will be representatives from the American Tobacco Company, and the Imperial (English) Tobacco Company besides other buyers, this indicating the demand which must exist for the new obacco crop.

STORIES MADE, WITH FEET Animal Tracks In the Wood Whie Betray Identity.

Each enimal makes its own kind of track in the mud, snow or dust. No two make exactly the same. The track and the track of a fox is readily disnished from that of a rabbit or of 14 to 0. small dog. And, more than that, the track of one coon may differ from that of his own brother, so that one can sometimes distinguish the track of a given individual and by seeing it on different occasions get something like an insight into its life. Thus a famous grizzly in the west was known by his track. One of his toes had been cut off by a trap, and the difference that made in his track was easy to see.

To come nearer home, our common animals sometimes have unpleasant experiences with steel traps. The marks of these on their feet often add a peculiarity that identifies the animal. In other cases the track is extra large or small or is crooked, but it always keeps the main features of its kind. The track of one sort of animal rarely need be mistaken for that of another, and the A' B C of tracking is to learn the chief kinds of footmarks that are to be found in your region. The way to learn tracks is to draw those that you find, always sketching them right from nature, never from memory, and it is always best to make them exactly life size.—Ladies' Home Journal.

The One That Chose to Pay Three men had been putton's spree, and on the way home late at hight they made a wager that the one who did not do as his wife told him should pay, for a champagne supper the fol-
