

KODOL digests what you eat!

KODOL cleanses, purifies, strengthens and sweetens the stomach.

KODOL cures indigestion, dyspepsia and all stomach and bowel troubles.

KODOL accelerates the action of the gastric glands and gives tone to the digestive organs.

KODOL relieves an overworked stomach of all nervous strain, gives to the heart a full, free and untrammelled action, nourishes the nervous system and feeds the brain.

KODOL is the wonderful remedy that is making so many sick people well and weak people strong by giving to their bodies all of the nourishment that is contained in the food they eat.

Your Dealer Can Supply You.

Bottles only \$1.00. Six bottles \$5.00. The trial size, which holds 2 1/2 times the full size, is sold for 50c.

F. S. DUFFY

THE NEW WOMAN

He dropped in at her studio late in the afternoon, although he was quite aware that she preferred to receive him in the evening in the flat which she shared with her sister artist.

She was alone and tired. Her sister—she was a portrait painter—had just gone, and she was in the act of making a cup of tea for her own use.

The tea table was an inviting one. The little kettle purred softly. She handled the tea ball gracefully with pretty and expressive hands.

"I don't see what you are doing with a teakettle," he said. "You have assured all that it stands for. You have found something better than domestic life."

"That is nonsense," responded the woman of genius crossly, for her work had not gone well that day. "Tea tables are popular because women need stimulus and cheering dishes because men like substantial nourishment."

"Those are very pretty views—very pretty," he remarked gloomily, "but I have not observed that you practiced them. Your views are incompatible with marriage."

"You wouldn't have me marry the wrong man just to show that my views upon the woman question were conservative, would you?"

"You will never find the right one."

She looked at him—a curious, measured, wondering gaze. There was scorn in it, but it was all scorn? "No," she said slowly, "I am not emancipated enough for that. I intend to let him find me, even though we play at hide and seek together all our days." It was rather difficult for this man to admit an important idea offhand into his mind, but something in her voice stirred him so that he sprang to his feet.

"Do you mean—would you really listen?"

It was half an hour later before it occurred to him that all this was violating precedent.

"Do you suppose you can be happy?" he inquired, and then he brought up the subject of the books in which married women of genius had always been miserable.

"Oh, books," said she, with an indignant scorn. "Haven't you ever noticed that people write best about things of which they know absolutely nothing? And you thought I did not care and would not marry you?"

"I thought so, yes."

An adorable smile bent her lips. "Don't you think you were rather hasty, not to say anything, in adopting so completely the generalization that the artist rejects—love and with it life?"

"But if you had heard yourself talking of your work," he cried, "you seemed to think art the one thing in the world. Every word fell like a clod on a coffin."

"Why should I not speak of art with fervor? I feel it all, and you had not offered me any career which I preferred."

"Ah, but do you, will you always prefer it? It is not as if you were merely talented, you know, to give up?"

"Give up? But I intend to give up nothing! I am afraid you are a little stupid."

"Would you mind explaining the situation to me?" he asked humbly.

"That is very easy," she said composedly. "I simply don't intend to be unequal to the combination of love and art."

The luminous brilliancy of this solution kept him silent, while she went on:

"Those women you read about, you know, were under the disadvantage of not being modern when they tried to do things. They were working against a tremendous though perhaps invisible pressure. The world wasn't adjusted so as to help them and make the solution of their problems easy. They felt that horrible weight—the pressure of the disapproval of the universe—and could not stand out against it. But with us it is different. The world is ours and the fulness thereof—at least that is what I feel about it. One has deliciously buoyant sensation—the Lord is on our side feeling—that is in itself a guarantee of success. Then, you know, we have better health and fewer nerves than women used to have, and that makes a difference."

"But suppose," he persisted, "just suppose that you were to fail. What then?"

She puckered her brows judicially.

"One is willing to pay a certain price for the best things," she admitted slowly, "if the goods are delivered. It is possible that happiness might not be a very bad bargain, even though I paid for it with art."

"Ah, darling!" he began, but she went on: "But I shall not have to do it. I shall have my cake and eat it too."

He looked at her with an expression of admiration which almost hid his fundamental skepticism.

"You are," he said, with sudden illumination, "something more advanced than modern. You are she of whom we have heard—the coming woman."

She looked down at the pink palm which he had held fast in his own through all her self possessed eloquence, and suddenly a wave of color rose and swept across her face.

"Ah, no!" she said softly. "But he heard her. "Whether I succeed in combining love and art or not, it seems to me I have arrived!"

Fractional.

"Let me write the songs of a country, and I care not who makes the laws," said the young man of intense literary ambition.

"Well," answered Senator Sorghum, "I have heard of some song writers who made more money than lawyers, but I don't believe the proposition holds good as a rule."—Washington Star.

Bad, Very Bad Roads.

A visitor from an adjoining county was in the city yesterday, and spoke of the bad county roads.

"Bat," said the visitor, "when I struck Owen county, I never saw such fearful roads, and the bad traveling was right up to the city limits."

Will the county roads ever be worked even as the law requires? That much would prove of some benefit.

LIABLE TO EXPLODE.

HARMLESS HOUSEHOLD GOODS THAT ARE REALLY DANGEROUS.

Sugar and Chlorate of Potash is a Wicked Combination, and Flour Dust and Dry Air is Fraught with Danger—Odorous of Gunpowder.

At the premises of an English company there occurred some time ago a disastrous fire which completely gutted an enormous building and caused losses aggregating \$500,000. The fire was attributed to an explosion of malt.

Any fine inflammable dust when mixed with a certain proportion of dry air will explode. There was a previous similar accident in a New York candy manufactory. A terrific explosion which wrecked the entire building was discovered to be due to the fact that particles of fine icing sugar had been allowed to invade the room where the furnaces were.

An eminent authority on explosives declares that many of those accidents in coal mines usually attributed to fire damp have been caused by dry coal dust suspended in the galleries having been accidentally fired. Even so apparent as innocent a substance as flour becomes fearfully explosive when mixed in suitable proportions with dry air.

Another substance that has proved to be extremely dangerous when stored in large quantities is chlorate of potash. A disaster some years ago in a big London factory proved the destructive powers of this simple remedy for colds.

Sugar and chlorate of potash mixed for blasting purposes, but so dangerous a compound is it that any explosive containing these ingredients is not likely to pass the government tests in this country.

A good many years ago it was discovered that cellulose soaked in strong nitric acid changed from a substance no more harmful than paper to a fierce explosive. The number of materials on which nitric acid will work a similar transformation is almost endless. Wood, paper, straw, coal, peat, pitch, starch, sugar, tea, tan, phosphorus, iron, zinc, copper and magnesium are only a few that could be named.

One of the best known and most terrible of these mixtures is nitroglycerin, which is simply nitric acid and common glycerin mixed together and allowed to fall into a stream of water. Dynamite is nothing more than nitroglycerin absorbed by some spongy substance. Alum, asbestos, plaster of paris, sawdust, bran, meal, even dried and powdered potatoes, have been employed for this purpose, but the substance most commonly employed is what is known as "kiesel guhr," or spongy earth. This is the kind of clay formed of minute fossil shells, great beds of which are found in Germany and other parts of the world.

Gun cotton, which was first made in 1845, is the form of nitro compound usually employed in war. It is manufactured from ordinary cotton waste treated with a mixture of nitric and sulphuric acids.

There is one very curious point about gun cotton. It cannot be made from raw cotton in the boiler waste cotton is necessary for its manufacture. It seems as if the bleaching to which manufactured cotton has been subjected has something to do with fitting the waste for becoming explosive material. Oily waste is, however, completely useless for making gun cotton, and if even a little is carelessly used a whole batch of the manufactured product may be spoiled.

Gun cotton is so extraordinarily sudden in its action that a small quantity has been exploded in contact with a heap of gunpowder and has failed to set fire to it.

The great advantage which gun cotton possesses over all other explosives is that damp does not injure it. In fact, wet gun cotton explodes with just as great violence as dry, but is of course much harder to fire. Consequently it is one of the safest explosives to carry, as it can be thoroughly wetted before packing and kept wet during transport. For mining purposes or for use in war gun cotton is usually compressed into hard cakes.

The cordite which is now used in British military rifles is a rather more compound substance, being composed of thirty-seven parts of gun cotton mixed with fifty-eight of nitroglycerin and five parts of mineral jelly. It is formed into little cords each three-eighths of an inch in diameter. These are made up into little fagots which are placed in the cartridges.

What seems a very odd substance from which to make an explosive is gutha percha. But by the action of nitric acid it can be turned into a formidable detonator.

Each country has its pet powder. The United States uses picrate of ammonia; the French have a beautiful, semi-transparent, chestnut colored powder made of the nitrates of potassium and barium. Besides these there are dozens of explosives with fancy names such as ballistite, cannonite, rifleite, randidite, plastominitite. These vary in size and shape of grain, color and power, but they all depend on the action of nitric acid for their explosive force.—Atlanta Constitution.

WOMAN AND FASHION

A Fagoted Blouse.

This garment is called a theater blouse. It is of white silk covered with rows of fagoting and trimmed with lace.

THEATER BLOUSE.

The yoke, which extends well over the shoulders, is of Irish guipure—Chic Parisien.

A French Dress.

A dress which offers an ingenious combination, serving for two occasions of a different sort, is made of crepe de chaine or any of the thin materials suitable for dinner and evening wear. It is an imperious creation, but could easily be copied. On the skirt are ad justed garlands of guipure, original because they dip in the back where the embroidery is deepest, finishing in front high and threadlike. Elbow sleeves of chiffon touched with delicate motives of guipure make this dress, with a delicate waist, suitable for any evening ceremony, while at the same time it is made suitable for afternoon functions by a border of guipure with a close fitting collar which fastens tight in the back and falls well over the shoulders. A band of chiffon unites the bodice with its delicate corsage in front, and underneath a series of loops and small buttons keep the two pieces together safely.

Lace Collars in Demand.

Lace collars of all shapes and sizes are now greatly in demand, for there does not seem to be any gown with which they cannot be worn. On morning gowns intended for house wear the large lace collar reaching to the shoulders is a favorite style of trimming and is used on gowns of any kind of material, whether the material be plain, plaited or tucked. With the street gown for ordinary everyday wear the lace collar would be inappropriate, but it is not banished from the silk and fancy waists worn with this same costume. The afternoon gown, be it of silk, satin, cloth or velvet, has the lace collar in some size or other, either small turnover, one of two lace or the cape collar of some heavier design. The evening gown this season is considered most smartly trimmed when it has a border of lace, which border is often a rare old lace collar.

New Shirt Waists.

The new wash shirt waists for spring and summer wear are being shown in all the shops in the first openings of the season.

Among the white waists heavy materials are the rule. The new vesting leads all the other styles in latest interest. Besides the stiff and French percale are both used extensively in the new white waists. The basket weave of the vesting is a decided novelty. Not for a long time have the popular white waists been made of any material similar to it.

Pretty Child's Frocks.

The child's dress shown in the accompanying cut illustrates the growing popularity of small artificial flowers for dress trimming. This dress is of plain white India linen and is profusely

FOR THE HOUSEWIFE

Adulterated Foods.

Professor E. F. Ladd of the chemical department of the North Dakota Agricultural college says:

"I do not care to pose as an alarmist or to injure the business of any man, but brought continually as I am in contact with the existing conditions and knowing the harm that comes from the use of these products I feel that the public is entitled to know the facts."

"From a small quantity of preserved strawberries, jam or jellies, about what one might eat at a single meal, I have extracted enough aniline dye to color a piece of flannel four inches square a bright red. From a teaspoonful of lemon extract I have taken as much peric acid as physicians would be likely to prescribe in two doses. I have recently examined, for example, what purported to be blackberry jelly made from paste, possibly a little jelly added, colored with coal tar dyes, preserved with formalin and sweetened with glucose."

"Should not some steps be taken to enforce the pure food law?"

"Similar violations occur in most states."

A Smokeless Frying Pan.

No more horrid odors through the house when cooking is in progress. A smokeless frying pan is the latest invention to come to the housekeeper's aid. There is a diminutive chimney in one side of the frying pan by which all the odor of cooking is sucked down into the stove and presto, up the chimney. Tiny perforations in the lid aid the work.

The hole in the bottom of the pan is on one side, so that it in no way interferes with anything placed in the pan. It is also walked around with the careful housewife need not fear that any of the juices or frying material will escape. The gases are sucked down through the opening and out through the natural vent, the chimney. Now that it has been so well done one wonders it was not done before. The hazard of frying in the smoke and smell that fill the kitchen and in spite of the utmost care creep all over the house. This is an effective remedy. It is inexpensive too.

Shad Roe Salads.

A shad roe salad needs a pair of roes boiled a half hour in salted water, to which a tablespoonful of vinegar has also been added. Remove from the fire and plunge into ice water. Drain, skin and slice thin with a silver knife and serve with a French dressing made as follows: Put one and a half teaspoonfuls of salt in a bowl that has been rubbed with a halved onion, cover with pepper, then with cayenne, add six tablespoonfuls of oil and two of vinegar. Before stirring at all add a slice of ice the size of an egg and then stir all with a fork for five minutes. Remove the ice and beat until thick. Use at once. Garnish the roe salad with pieces of cucumber cut in cubes and a teaspoonful of finely chopped olives.

A New Meat Roaster.

The meat roaster shown here is one of the new things intended to facilitate and improve the process of roasting.

CONSERVES THE SAVORY ODORS.

The inner pan has a wire tray in the bottom which can be lifted out. Meats cooked in this utensil have all the savory odors closed in during the cooking.

The Ring in the Cake.

It is the custom at some social gatherings to mix various objects, such as coins, rings, thimbles, etc., in a cake to furnish amusement to the guests. There are two objections to this custom as ordinarily carried out—some of the metal articles may not be perfectly clean and there is the risk that the smallest among them may be swallowed. The best plan is to twist each article in a bit of oiled paper, which will prevent risks from either cause.

Use Matting in Summer.

Matting is dirty and expensive for continuous wear. For summer, however, it is highly desirable. Those who have carpets cannot do better than to follow the example set by Stephen Girard. Each spring this worthy business man had all his carpets taken up, the house cleaned and the floors then covered with matting. The carpets were thoroughly cleaned and were placed in hogsheads for storage till fall.

A Combination Jelly.

A housewife who has tried it says that a delicious combination jelly is made by cooking a half peck each of apples and quinces and a quart of cranberries together until soft after barely covering with water. Strain and to every pint of juice allow a scant pint of sugar, then proceed as with other jellies. It is delicately flavored and a beautiful pink in color.

To Hang Pictures.

A device for hanging a group of small framed pictures consists of a small bar with brass tipped ends. This is hung from the high picture molding of the wall, and the small pictures are suspended from it, attached by brass chains. This contrivance obviates the necessity of driving several nails into the wall for the small pictures.

Matched.

Towne—Met Gabbie and Perkins at a smoker last night and introduced them to each other.

Brown—Oh, say, it's a shame to introduce a bore like Gabbie to anybody.

Towne—It's evident you don't know Perkins or you'd see the humor of it.

CASTORIA.

The Kind You Have Always Bought

Beats the Biggest

I Know One Sure Remedy for an obstinate cold. Its name is PEARL-BALM.

SELECTIONS

THE AURORA BOREALIS.

What Retiring Members of the Peary and Hallett Expeditions Saw.

It was a trifle past the afternoon of sunset and the sea was a deep, rich purple, with long flowing swells. The sky, a fine light turquoise blue at the horizon, gradually deepened into a rich cobalt, in which a few stars twinkled. A majority of the men were absorbed in various occupations below when a call of enthusiasm brought all up on deck. At a point low on the southeastern horizon a faint film had arisen, which quickly, silently assumed the form of a curtain, waving and mounting upward in two stately columns past a group of finely shaped cirro stratus. In a few seconds it was across the zenith, displaying pink and blue lights, with edgings at intervals of faint purple and red. The columns descended rapidly in ever varying spirals of perspective until the avant garde was lost behind the far northwest horizon. We were about off the Danish port of Godthaab, Greenland, a sufficiently southern latitude at this season for the alternation of day and night, and as the heavens darkened the stars shone with increasing brightness through this great shimmering veil of light.

The heavens and the sea grew darker and darker and the aurora brighter and brighter in lightning changes of form and color, with the green and yellow and blue raps predominating and the delicate sheen from the aurora's light writhing in fiery serpent forms over the face of the moving waters. What impressiveness, what magnificence! It held the soul as in a spell. There was not much talking. Splendid as it was, I afterward witnessed auroras which produced a deeper impression, due doubtless to the presence of the long night of the far north.—Frank Wilbert Stokes in Century.

Fox Drowned by a Limpet.

A recent writer in Ireland says: "One of the islands in Clew bay during spring tides is connected with the mainland by a sandy stretch, which evidently is explored by the foxes of the neighborhood when opportunity occurs. Lately one of the islanders crossing by this strand to the mainland found the dead body of a drowned fox beside a large rock. On investigation the man ascertained that the fox was firmly held by the tongue by a big limpet. Evidently roynard had seen the shellfish moving on the rock and had tried to annex it, but the limpet proved too sharp and, closing down, held the fox firmly till the rising tide drowned him."

A Roe Egg.

The supply of roe eggs is apparently not yet exhausted in Madagascar, for a fresh specimen was brought over recently from Antananarivo to Johannesburg. Its finder doubtless regarding the island capital as the most likely market in the South African quarter. The egg was put up for sale by auction, "between the chains" the other day and after some spirited bidding was sold for \$100. Being, comparatively speaking, a fresh egg, the price paid for it is probably a fair one, but after it passes through a few more auctions its figure may reach the regular market standard, which has lately been well over \$300.

PLAIN PROOF

What This Gentleman Says is a Mere Statement of Facts.

No one can have any reason for dissenting from the particulars and proofs which follow, for verification of the same is within easy reach of every resident of this vicinity. That Doan's Kidney Pills promptly and effectually cure kidney complaints is substantiated not only in this particular case, but by all who have given them a fair trial. Testimony likewise shows that you do not have to take them indefinitely to be cured.

Walter McLachlin a machine hand, employed at J. Holliday & Sons planing mill, Wheeling, W. Va., address 9332 Jackson street, says: "Had I not used Doan's Kidney Pills when I did I would not be alive now. I was in a terrible condition and although I took quarts of medicine I got no better, but worse. Friends spoke of my bad appearance and thousands knew about it. I could hardly get around, and felt and looked like a dead man more than a living one. Doan Kidney Pills were a blessing to me, half a box relieved me, three boxes entirely cured me and now I feel as though my back was as strong as that of any horse in Wheeling. I would rather have a box of Doan's Kidney Pills than the services of all the doctors in the State."

For sale by all dealers. Price, 50 cents a box. Foster-Milburn Co., Buffalo, N. Y., sole agents for the U. S. Remember the name—Doan's—and take no other.

MYSTERY.

Will Somebody Come and Claim This Man.

Realizing the value of the advertising columns of the JOURNAL a man has written this paper to inform the public that he found a strange man on Cedar Island Monday morning who was unable to give an account of himself and was undoubtedly demented.

The letter stated that the man had a raw boat in which were a grip and some provisions but the man did not know where he came from nor where he was going. The man was about 35 or 40, dark hair and eyes, smooth face and weighed about 150 pounds.

Anybody having lost a man may be able to locate him through this notice for which the JOURNAL makes no charge.

A freight car on the Atlantic Coast Line road was thrown off the track while being switched last evening. No damage done.

A dozen or more fishermen from Florida were transferred here last night from the A. C. L. train to the A. & N. C. They went to Beaufort.

Yacht Lulu Purchased.

The schooner yacht Lulu, has been sold by its former owner, Daniel Goodman, to L. B. Midyette of Oriental, who will put the yacht into service at Oriental, to be used by the sportsmen who visit that place.

The Lulu is of 24 tons, 62 feet in length, 20 feet beam. The consideration paid for the boat was \$1,000.

One Less Rat.

A little excitement was caused on Pollock street yesterday afternoon by a rat which made a fatal venture on the thoroughfare. The animal was a very large one and was making rapid progress towards Mr. Hellen Huff who was standing on McSorley's corner and gave it a terrific kick that sent it 15 feet away and killed it. Just as Mr. Huff had paid his respects to the rat policeman John Bowden aimed a blow at it with his cane but instead of hitting the rat he hit Mr. Huff on the leg. Mr. Huff says if he had struck the rat with the force that he struck him the result would have been the same. There will be a sore spot on his leg for a few days in consequence of that rat.

Cancerous Ulcers

At first have nothing about them to indicate their true nature. They look like ordinary sores and are usually treated as such, some simple salve, wash or powder being used in the hope of drying them up and stopping the discharge; but while the place may temporarily scab over, it again inflames and festers, becoming as bad or worse than ever. After while the deadly poison begins to eat into the surrounding flesh and the sore spreads with frightful rapidity. Then the sharp shooting pains, which distinguish the cancerous from the common ulcer, are felt, and the unfortunate patient is brought face to face with the most dreaded of all maladies, a cancerous ulcer.

Whenever an ulcer of any kind is slow in healing it should be closely watched, particularly if there is an inherited predisposition to cancer. Often times a malignant, stubborn ulcer starts from a boil, wart, mole, bruise, blister or pimple, for when the blood is tainted and the germs and seeds of cancer are implanted in the system, you cannot tell when or where the deadly poison is going to break out.

S. S. S. cures these cancerous ulcers and chronic sores, by driving out of the system all the morbid and unhealthy matter that keeps the ulcer irritated and discharging. It purifies and strengthens the blood, enabling it to throw off the germs and poisons, thus checking the further formation of cancer cells, and when all impurities have been removed from the blood and system the ulcer heals naturally and permanently.

All ulcers, even the smallest, should be looked upon with suspicion and treated promptly before they become cancerous.

S. S. S. is a purely vegetable remedy, a perfect blood purifier, and an invigorating tonic. Write for our free book on Cancer. The Swift Specific Co., Atlanta, Ga.

There is a diminutive chimney in one side of the frying pan by which all the odor of cooking is sucked down into the stove and presto, up the chimney. Tiny perforations in the lid aid the work.

The hole in the bottom of the pan is on one side, so that it in no way interferes with anything placed in the pan. It is also walked around with the careful housewife need not fear that any of the juices or frying material will escape. The gases are sucked down through the opening and out through the natural vent, the chimney. Now that it has been so well done one wonders it was not done before. The hazard of frying in the smoke and smell that fill the kitchen and in spite of the utmost care creep all over the house. This is an effective remedy. It is inexpensive too.

Shad Roe Salads.

A shad roe salad needs a pair of roes boiled a half hour in salted water, to which a tablespoonful of vinegar has also been added. Remove from the fire and plunge into ice water. Drain, skin and slice thin with a silver knife and serve with a French dressing made as follows: Put one and a half teaspoonfuls of salt in a bowl that has been rubbed with a halved onion, cover with pepper, then with cayenne, add six tablespoonfuls of oil and two of vinegar. Before stirring at all add a slice of ice the size of an egg and then stir all with a fork for five minutes. Remove the ice and beat until thick. Use at once. Garnish the roe salad with pieces of cucumber cut in cubes and a teaspoonful of finely chopped olives.

A New Meat Roaster.

The meat roaster shown here is one of the new things intended to facilitate and improve the process of roasting.

CONSERVES THE SAVORY ODORS.

The inner pan has a wire tray in the bottom which can be lifted out. Meats cooked in this utensil have all the savory odors closed in during the cooking.

The Ring in the Cake.

It is the custom at some social gatherings to mix various objects, such as coins, rings, thimbles, etc., in a cake to furnish amusement to the guests. There are two objections to this custom as ordinarily carried out—some of the metal articles may not be perfectly clean and there is the risk that the smallest among them may be swallowed. The best plan is to twist each article in a bit of oiled paper, which will prevent risks from either cause.

Use Matting in Summer.

Matting is dirty and expensive for continuous wear. For summer, however, it is highly desirable. Those who have carpets cannot do better than to follow the example set by Stephen Girard. Each spring this worthy business man had all his carpets taken up, the house cleaned and the floors then covered with matting. The carpets were thoroughly cleaned and were placed in hogsheads for storage till fall.

A Combination Jelly.

A housewife who has tried it says that a delicious combination jelly is made by cooking a half peck each of apples and quinces and a quart of cranberries together until soft after barely covering with water. Strain and to every pint of juice allow a scant pint of sugar, then proceed as with other jellies. It is delicately flavored and a beautiful pink in color.

To Hang Pictures.

A device for hanging a group of small framed pictures consists of a small bar with brass tipped ends. This is hung from the high picture molding of the wall, and the small pictures are suspended from it, attached by brass chains. This contrivance obviates the necessity of driving several nails into the wall for the small pictures.

Matched.

Towne—Met Gabbie and Perkins at a smoker last night and introduced them to each other.

Brown—Oh, say, it's a shame to introduce a bore like Gabbie to anybody.

Towne—It's evident you don't know Perkins or you'd see the humor of it.

CASTORIA.

The Kind You Have Always Bought

Beats the Biggest

I Know One Sure Remedy for an obstinate cold. Its name is PEARL-BALM.

SELECTIONS

THE AURORA BOREALIS.

What Retiring Members of the Peary and Hallett Expeditions Saw.

It was a trifle past the afternoon of sunset and the sea was a deep, rich purple, with long flowing swells. The sky, a fine light turquoise blue at the horizon, gradually deepened into a rich cobalt, in which a few stars twinkled. A majority of the men were absorbed in various occupations below when a call of enthusiasm brought all up on deck. At a point low on the southeastern horizon a faint film had arisen, which quickly, silently assumed the form of a curtain, waving and mounting upward in two stately columns past a group of finely shaped cirro stratus. In a few seconds it was across the zenith, displaying pink and blue lights, with edgings at intervals of faint purple and red. The columns descended rapidly in ever varying spirals of perspective until the avant garde was lost behind the far northwest horizon. We were about off the Danish port of Godthaab, Greenland, a sufficiently southern latitude at this season for the alternation of day and night, and as the heavens darkened the stars shone with increasing brightness through this great shimmering veil of light.

The heavens and the sea grew darker and darker and the aurora brighter and brighter in lightning changes of form and color, with the green and yellow and blue raps predominating and the delicate sheen from the aurora's light writhing in fiery serpent forms over the face of the moving waters. What impressiveness, what magnificence! It held the soul as in a spell. There was not much talking. Splendid as it was, I afterward witnessed auroras which produced a deeper impression, due doubtless to the presence of the long night of the far north.—Frank Wilbert Stokes in Century.

Fox Drowned by a Limpet.

A recent writer in Ireland says: "One of the islands in Clew bay during spring tides is connected with the mainland by a sandy stretch, which evidently is explored by the foxes of the neighborhood when opportunity occurs. Lately one of the islanders crossing by this strand to the mainland found the dead body of a drowned fox beside a large rock. On investigation the man ascertained that the fox was firmly held by the tongue by a big limpet. Evidently roynard had seen the shellfish moving on the rock and had tried to annex it, but the limpet proved too sharp and, closing down, held the fox firmly till the rising tide drowned him."

A Roe Egg.

The supply of roe eggs is apparently not yet exhausted in Madagascar, for a fresh specimen was brought over recently from Antananarivo to Johannesburg. Its finder doubtless regarding the island capital as the most likely market in the South African quarter. The egg was put up for sale by auction, "between the chains" the other day and after some spirited bidding was sold for \$100. Being, comparatively speaking, a fresh egg, the price paid for it is probably a fair one, but after it passes through a few more auctions its figure may reach the regular market standard, which has lately been well over \$300.

PLAIN PROOF

What This Gentleman Says is a Mere Statement of Facts.

No one can have any reason for dissenting from the particulars and proofs which follow, for verification of the same is within easy reach of every resident of this vicinity. That Doan's Kidney Pills promptly and effectually cure kidney complaints is substantiated not only in this particular case, but by all who have given them a fair trial. Testimony likewise shows that you do not have to take them indefinitely to be cured.

Walter McLachlin a machine hand, employed at J. Holliday & Sons planing mill, Wheeling, W. Va., address 9332 Jackson street, says: "Had I not used Doan's Kidney Pills when I did I would not be alive now. I was in a terrible condition and although I took quarts of medicine I got no better, but worse. Friends spoke of my bad appearance and thousands knew about it. I could hardly get around, and felt and looked like a dead man more than a living one. Doan Kidney Pills were a blessing to me, half a box relieved me, three boxes entirely cured me and now I feel as though my back was as strong as that of any horse in Wheeling. I would rather have a box of Doan's Kidney Pills than the services of all the doctors in the State."

For sale by all dealers. Price, 50 cents a box. Foster-Milburn Co., Buffalo, N. Y., sole agents for the U. S. Remember the name—Doan's—and take no other.

If You Have Rheumatism

URICISOL the great tested and endorsed California Remedy will cure you. It also cures Liver, Kidney and Bladder diseases, caused by an excess of uric acid. It never fails, and builds up the health and strength while using it. Send stamp for book of wonderful testimonials. Price, \$1 per bottle. For sale by druggists. If your druggist can not supply you it will be sent prepaid upon receipt of price. Address: Uricisol Chemical Co., Los Angeles, Calif., or Lamar & Rankin Drug Co., Atlanta, Ga. Distributing Agents.

SECRETS

At the Price of Suffering.

Woman on her way to semi-invalidism caused by pregnancy suffers the pain and terror. Ignorance prompts her to suffer alone in silence, and she remains in the dark as to the true cause—motherhood.

Mother's Friend takes the doctor's place at her side, and she has no cause for an interview. She is her own doctor, and her modesty is protected. Daily application over the navel, the breast and above the abdomen, throughout pregnancy, will enable her to undergo the period of gestation in a cheerful mood and rest undisturbed.

Mother's Friend

is a Lotion, and for external use only. It is not a medicine, and does not stain, nor does it hurt the skin. It is made of the most delicate and purest ingredients. It is sold in large boxes of 100 pills and in small boxes of 25 pills. It is sold by all druggists. Write for particulars to Mother's Friend, 10, South Street, London, E.C. 4, England.
