

SYNOPSIS OF PRECEDING CHAP- when one took note of their enorm

James Adams, West Point graduate, is in Paris at the opening of the French-German war. In a balloon reconnoissance for the French he is almost captured by the Germans. The balloon is wrecked at the C deau Lagunay. Rescued, Adams falls in love with Aimec, daughter of the Count Lagunay. The Germans invade France. A German Colonel, Griesman, insults Aimee and is attacked by Adams, who is in turn overpowered by the Kaiser. He joiss the German army under a friend, Lowenberg; engages in an ambush of a French column, and returning to camp learns that Griesman has charged Aimee with treason and has charged treason the continuous to their enormous turret guns—twenty-inch, without oubt, argula of turret guns—twenty-inch, without oubt, argula of their enormous turret guns—twenty-inch, without oubt, capable of hurling a ton or more of metal every five minutes. I counted ten battleships, five or six torpedo-boat destroyers (recognized by their quadruplicate funnels) and several cruisers. Two huge coal barges were being towed several miles to the real cruisers. Two huge coal barges were being towed several miles to the real cruisers. I was leading west at the same pace.

CHAPTER VII. I was awakened early the next morn-ng by the sun. My clothes were damp with cloud moisture. I did not learn

until then that there was an aluminum roof to the air car, which was pocketed in the basket-work sides, and that there were four electric radiators to provide heat. Thereafter I was more comforta-

The ship floated steadily high in the clouds. I could see nothing but vapor being rapidly dissipated by the sun, which occasionally shot clear rays into my eyes. The barometer indicated an my eyes. The barometer indicated an altitude of two miles, and the speed gauge registered, for the past twelve hours, an average of twenty miles an

hours, an average of twenty miles an hour.

After a brief breakfast I examined the ship more at leisure. I found it a little ahead of anything I had ever seen. It steered perfectly, and could be sent up or down by the elevation or depression of broad aluminum blades fore and aft. A small motor, run by a powerful chemical battery, operated the propellers; though it was often possible to travel rapidly with the wind alone a motive power. There was also a Faure condenser for extracting hydrogen from the air, which operated automatically keeping the bag always fully inflated. A wireless telephone outfit, various scientific instruments, the electric lighting and heatting apparatus and the tank for condensing water from the gasbag were novelties in their way. I found also a second hamper of food and drinkable, and, to my great delight, a box of fine Key West eigars, which I opened immediately. The car was eight feet wide and about sixteen feet long, and there was ample room for a party. I longed for Fleischmann, or poor Lowenberg.

When I had started the motor and set the fans to descend I took a telescope from the rack and waited eagerly for a sight of something that would indicate my whereabouts. By the compass I was going due west, and if that I was far out on the Atlantic.

At last the clouds around me thinned and vanished, and I came into clear air. Below me, stretching away in all directions to the horizon, lay the sea, its tossing waves breaking white under After a brief breakfast I examined the

"Who are you," it called, in French. I looked up in astonishment, and there floated the strangest airship I had ever seen. It was merely an aeroplane, supported by great saucer-like metal contrivances, with a small basket-car hung by slender cables. It swept by, some hundred feet above me, and I had a glimpse of a white face looking down upon me. I sped up the motor, and rising as I advanced soon drew up alongside my fellow traveler. Then ensued a brief conversation.

"Where are you going?" I shouted. He was not more than a hundred yards away.

away.
"I don't know. My steering fans
won't work, and I cannot turn. I suppose I shall have to consider myself bound for America

"Can you descend?"
"Yes."

ounds of Cainite, a new explosive whose force operated always down-ward. The homb contained also a mag-net and circuit-breaker so tuned as to be responsive to electrical vibrations be responsive to electrical vibrations set up in a powerful electrical instrument on the discharging ship. By the use of a unique range finding apparatus the bomb was kept in sight during its whole flight, and upon reaching the desired point it was exploded by the mere pressure of a button on the ship from which it had been fired. Tests with this bomb had shown wonderful accuracy and most deadly effects.

Another offensive device was an aerial

Another offensive device was an aerial illuminator—a small, balloon-like affair, arranged to float at a considerable ele-

arranged to float at a considerable elevation, and carrying a powerful chemcai light, backed by strong reflectors.
A shoal of these illuminators would be
sent toward the enemy's fleet, lighting
up the sea and the vessels and making
easy targets for the German guns.

Against these devices the French had
prepared an aerial bomb to discharge
a heavy and deadly gas, and to sprinkie
acids or explosives upon the ships of
the enemy. They were also provided
with aluminum armor, so thick and
tough that an ordinary projectile would
merely become imbedded therein and
held fast without being able to pass
through. Around their ships and under
water they hung large electro-magnets,
exerting, by peculiar wiring, a repellexerting, by peculiar wiring, a repelling influence on approaching torpedoes at a distance of a hundred yards, invariably turning them aside. Their mainstay, however, was a new centrifugal submarine torpedo-boat, which needed not to come to the surface, re-maining down for days at a time, yet observing operations on the surface, and doing its work with deadly accuracy. LeFevre could not give me the details of this strange machine. Its terrible effectiveness, however, was apparent the next day.

I had no apprehension whatever as to the stability of L'Aimee, and we lay down and went to sleep that night without the least apprehension. Stanch and true was she, even as my own sweet betrothed. It was still dark, when I was awakened with a start by the sound of heavy detonations below us. I leaped to my feet and looked over the side of the car. LeFevre joined me the

next moment.

The Germans had evidently planned a The Germans had evidency planned an light attack by the use of their illuminators. Below us the sea was alight in great spots, and dimly we could make out the vessels over which shone the strong, blue-white lights. Far off in the darkness we could see the occa-sional flash of a gun. The Germans were sending home great shells loaded with explosives. Their aerial bombs could not be followed at night. The could not be followed at night. The French were replying, but their fire was more or less blind. The roar of the guns came up to us plainly. It shook the heavens. Suddenly there was a flash that lit up the whole sky, and a terrific explosion sounded from below. A German shell had found its mark. One of the French battleships had gone

One of the French to the night there was to her long home.

During the rest of the night there was no intermission in the heavy firing. Fearful explosions sounded now and then, and we could but guess the determinent that was being wrought. I

struction that was being wrought. I had no wish to see either side win at the expense of the other.

At dawn we were able to note the situation clearly. Six or eight miles away to the northeast lay the German fleet. Almost beneath us the French were gathered in loose order. Both were plying their great guns. On both sides burning ships were drifting away, others were careening, half-filled with water. And now, with the coming of daylight, the combatants resorted to their deadliest appliances. As we daylight, the combatants resorted to their deadliest appliances. As we watched one of the French battleships there was a dull explosion. The great hull opened, split in twain like a cante-loupe, and went skiddering to the bot-tom. We could see it deep in the clear water, its hundreds of seaman swarm-ing-around like so many ants in a hove!

It was remarkable to note the sub-It was remarkable to note the submarines moving here and there under
water. From our height we could see
clear to the bottom, and every boat
was visible by a bright streak as it
swept through the water. Suddenly
LeFevre clutched my arm and pointed.
"The Centrifugal," he said, in a whisper. I watched it on its way, advancing
in a bright whirl of bubbles. It was
making its way toward the German

ships left, both sadly disabled. The German squadron was in fine shape, but three of its battleships disabled. I sent L'Aimee lower to observe more closely. The Centrifugal heeded not the torpedo nets. It passed through obstructions as though it were spirit. We saw it under the bow of the Frederich Wilhelm, the largest battleship of the fleet. For half a minute it lay there, surrounded as ever by that whirl of sparkling bubbles. Then it darted away toward another. So interested were we in watching the uncanny movements of the strange boat that we did not observe the confusion on board the Frederich, nor on the others that were successively visited. Lef'evre noticed the great ships settling low in the the great ships settling low in the water, and spoke of it to me. There was something terrible about this destroyer. Inside of fifteen minutes every vessel in that fleet had been stung, as vessel in that fleet had been stung, as it were, by this great hornet of the sea, and every one was sinking. The seamea were throwing themselves of boats were putting out; rafts were flung into the sea. Presently the Centrifugal finished her work and we saw her whirling away, stopping here and there to smell a submarine and to kiss it or to smell a submarine and to kiss it or to sting it as it happened to be friend or foe. What a sight! Twenty-four German ships sinking, sinking, going down to eternal silence. One after an-other they vanished. The torpedo boats came to the surface, saw what had hap-pened, and put out for home and neu-tral ports. The Centrifugal, the grim destroyer vanished. The great hattle

solutely gone; a quarter of a billion dollars in battleships and thousands of brave fellows dead, only to satisfy the bickerings of diplomats—sacrifices to foolish notions of honor. foolish notions of honor.

To LeFevre the operations of the Centrifugal were a triumph for France, and he was enthusiastic in his delight. But I cared little one way or the other. I was tired of it all. Life had been too strenuous for me. I wanted quiet for a while, and naturally my thoughts turned to Aimee, my sweetheart. Was she safe?

she safe? she safe?

LeFevre insisted that I come with him to his home, but I refused. Turning to the east we made our way rapidly to the French coast. Here we settled ly to the French coast. Here we settled to earth in the open country, and after bidding LeFevre adieu I rose again and made my way east. I had but one thought, now that the battle was over, and that thought I was putting into action. My objective was Bethel, where I knew my love awaited me.

But had I known what else awaited me at Bethel I should perchance have gone in another direction.

gone in another direction.
(To be concluded next week.)

Maxine Elliott.

Maxine Elliott, who has taken house in London and will leave the stage for a time to enjoy social life, is famous as an actress and also for her beauty. Miss Elliott, who, upon the stage, retains her maiden name, under which she became famous, is the wife of Nat C. Goodwin, to whom she was married in 1898. She was born in Rockland, Me., and was but 16 when she first appeared on the stage Her serious work, however, did not begin until 1890, when she became associated with E. S. Willard. Subsequently she became a member of Daly's stock company and rapidly won distinction, which has been enhanced by her performance in her husband's com pany. Dramatically and socially she is a great favorite in both the United States and England.

Copper in Water Kills Germs: In looking to the purification of the water supply, either the local farm supthe water for a great city, remarkable results are announced the application of a new method of destroying micro-organisms in water, which was discovered about a year ago by Drs. Moore and Kellerman, of the Bureau of Plant Industry at Washing-ton. It consists simply in dissolving a certain quantity of copper sulphate in the water to be purified. Fortunately the dilution can be made so large that no deleterious effects are produced apon the water intended for drinking purposes. One part of copper sulphate to eight million parts of water is the proportion generally used, and it is pointed out that, in order to obtain any effect of copper from such a mix-ture a man would have to drink forty gallons of the water.

During the latter part of 1904 more than fifty sources of water supply in the United States were treated by this method with gratifying success. only are dangerous bacteria thus destroyed but the green growths that frequently choke up small ponds are also eliminated. Most important of all is the promise that by this treatment the germs of typhoid fever may be entirely removed from any source of water

supply.

In the case of a lake or pond the chemical is applied by suspending bags filled with copper sulphate over the side of a boat while the boat is rowed about. In two or three days the copper is entirely precipitated from the water, but the beneficial effects of the treatment last for weeks or months.

It has been suggested that this dis-covery may raise the question whether after all, our mothers were not right— although they did not understand the scientific aspects of the matter—in pre-ferring copper kettles for preparing many kinds of food.

FREE TO **ASTHMA SUFFERERS**

Home Cure that Anyone can Use Without Los of Time or Detention from Business.

of Time or Detention from Business.

We want every sufferer form Asthma to write us today for a free trial of our wonderful New Method for curing Asthma. We especially desire those cases of long standing which have tried all the various kinds of inhalers, douches and patent smokes without number and without relief. We know we can cure them. We want to and are willing to prove it absolutely free of cost. Many thousands have accepted this opportunity and are now cured. There is no reason why anyone, old or young, rich or poor, should continue to suffer from Asthma after reading this marvelous offer.

Our Method is not merely a temporary relief, but a cure that is founded upon the right principles, a cure that cures by removing the cause. Don't put this off until you have another attack, but sitright down to-day and write for the Method. It is free and we send it with all charges prepaid. Address. Frontier Asthma Co., Room 131, 109 Delaware Ave., Buffalo, N. Y

EDITOR GRECORY.

Exactly like illustration. Reproduces the standard cylinder reconnect on the most expansive machines, and we send one Colum song record with each phonograph. Has ball crystal reprodupoint, patient horn rest, large horn, latest design motor, and governor, springs and hearings are the aims as are most and an account of the send of

PALISADE PATTERNS.

PRICE, 10 CENTS EACH.

A TRIM COWN FOR A MISS.

For a young girl's gown there is no smarter model than the one sketched here. Every feature of the dress serves a purpose and the result is a graceful and becoming whole. The yoke lends breadth to shoulders which need it, while the tucks extending a short distance below, supply a becoming fullness for the blouse. The plastron front, continued in effect by the front pleat of the skirt, suggests height and slenderness, The skirt is pleated all around to make up the deficiencies of the undeveloped figure. Rajah, linen, taffetas or cashmere might develop this design. The least experienced dressmaker can fashion the gown without difficulty, for which 6½ yards of material, 35 inches wide are needed, in the medium size. Two Patterns:—4018, sizes 12 to 16 years. Two Patterns:-4019, sizes 12 to 16 years. 4020, sizes same.

The price of these patterns is 20c, but either will be sent upon receipt of 10c.

PALISADE PATTERN CO.,

17 Battery Place, New York City. For 10 cents enclosed please send pattern 4019 or No. 4020 to the following address. CITY and STATE

Mind, the sending of this coupon does not obligate you to pay one cent. It simply gives the I. C. S. the opportunity of proving how easy it is for you to improve your condition right at home without neglecting your present work.

home without neglecting your present work.

No risk to run. No books to buy.

The I. C. S. is an institution with an invested capital of over.

\$5,000,000, and a reputation of 14 years' successful work. It has taken a day laborer and qualified him as an electrician with a salary of \$3000 a year. It has taken a bricklayer and qualified him to become a building contractor with a business of his own of \$300,000 annually. It has taken a sailor and qualified him to establish of his own a yearly business of \$50,000. It has taken tens of thousands of men and women of every age and in every walk of life and in a few months qualified them to double, triple, quadruple their salary. To learn who they are; how it was done; how you can do the same, fill in the coupon and mail it to-day.

Succeed In Life

"SUDDENLY LE FEVRE CLUTCHED MY ARM."

the stiff wind and flashing back the rays of the morning sun. Eagerly I swept the whole range of visible ocean. Here and there appeared the black amudge of a distant liner and to the northeast I made out a low, dark line that might be either haze or land. But this was not all. Directly beneath me I perceived a series of dark objects, all spouting black smoke. They were of various sizes, and by the formation I could conclude only one thing—that they were the ships of a fleet, a naval squadron. Then I recalled the words of the Kalser that moonlight night at the Chateau Lagunay:

"There will be two great battles, on the land, is before us; the other, on the sea, will occur within a fortnight."

I confess to a feeling of elation that I was here, in the air, in position to witness the greatest naval battle of years, although I regretted the necessity for this test of arms. I observed that the fleet was headed northeast, and desiring a closer view I ran ahead a mile or more and descended, until I had a fair sight. The ships were French, by ther flass. Beautiful and stately were the great vessels; grimly beautiful, too,

n fleet, and thither we followed.

But whatever work awaited this terror must be done quickly. The Germans were wonderfully accurate with their Calnite aerial bombs. Ship after ship quivered, split open and sank like a broken teacup. The force of the calnite was so great that it operated for a distance of a hundred yards on every side, more than once sinking several of the smaller ships at one explosion. Lefevre groaned as, looking back, he saw one of the largest battleships collapse, fairly smashed into fragments. He shook his fist at the Centrifugal. "On, on!" he shouted. "Do thy work, laggard!"

The Centrifugal moved swiftly. At intervals it came up with a submarine, paused a moment to ascertain whether German or French, and acted accordingly. If French, it passed on; if German it darted at the victim, touched it, and as quickly darted away. What terrible power it exerted I could not understand, but at that fatal touch the enemy sank. There seemed to be no escape, no single chance. Presently this swift and allent messenger of death was in the thick of the German fleet. Looking back I saw that there were but two of the French
