CHARLES L. STEVENS, EDITOR AND PROPRIETOR.

Official Paper of New Bern and Craven County. SUBSCRIPTION RATES: Two Months... \$3.00

FIXING NEWSPAPER RESPONSIBILITY.

The introduction of Senator Grady's bill, to force newspapers to give the authorship of every article appearing in their columns...

Perhaps no responsibility is so assuredly established as that of the newspaper. That an article in not signed, whether of local or general import, under a date line of some place miles away, or without a date line, does not lessen the responsibility...

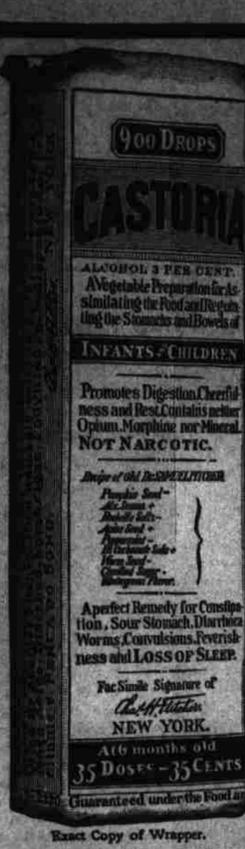

The clean and honest newspaper, like the moral individual, never thinks of the law, because their characters abhor uncleanness and dishonesty.

The publisher is responsible for every item that appears in the paper. The man who writes the article is not responsible for it; that is, he is no more responsible for it than is a workman in the shop responsible for the accident that happens on account of an imperfect piece of machinery that is turned out in the shop...

COMMUNITY BUILDINGS. The North Carolina Building and Loan League, now holding its eighth annual sessions, this year in New Bern has demonstrated its great success in every place where it has an organization.

KILL THE COUGH AND CURE THE LUNGS

Whoooping cough is not dangerous when the cough is kept loose and expectoration easy by giving Chamberlain's Cough Remedy.

B. & L. CONVENTION CLOSES

Interesting Session Held Yesterday Morning. Automobile Ride Given Members.

At 10:30 o'clock yesterday morning the Eighth Annual Convention of the N. C. Building and Loan League met at the court house for the transaction of the business on the program for the second day of the meeting.

The following report was made by the committee on resolutions: Mr. John M. Cooke, Esq., of Burlington, was on the program for an address but owing to the fact that he was seriously ill at his home at that place he was unable to be present.

At 1 o'clock the election of officers for the ensuing year was begun. Mr. E. L. Keeler, of Charlotte, was elected president of the League.

The members then entered into a discussion as to the place of meeting next year. Raleigh, Burlington and Marion each wanted Association to meet there and there was considerable discussion in regard to this matter but a vote was taken and Raleigh was chosen as the place of meeting next year.

The Association then tendered thanks to local B. & L. for the courtesies shown the visitors and also to the press for the interest taken in the meeting and the wide publicity given it.

Yesterday afternoon the local members secured a number of automobiles and carried the visitors all over the city and several miles out in the country. This trip was greatly enjoyed by all.

A few of the visitors returned to their homes last evening and the remainder will leave this morning. Several of these will visit Morehead City.

The following resolution was offered by the committee and unanimously adopted: Since our last annual meeting, an all-wise Providence has called to his eternal home our beloved President Samuel Witkovsky.

JUST IN TIME

Some New Bern People May Wait Till It's Too Late.

Don't wait until too late. Be sure to be in time. Just in time with kidney ills Messrs curing the back Before backache becomes chronic; Before serious urinary trouble set in. Doan's Kidney Pills will do this.

Mr. William T. Hadden, 126 E. Front St., New Bern, N. C., says: "I have had no occasion to use any kidney medicine since Doan's Kidney Pills cured me in 1908. I publicly endorsed them in January of that year and at this time I give you permission to continue the use of my statement. My back ached nearly all the time and was often so severe that I could hardly get out of bed in the morning. The kidney secretions bothered me and I felt tired and languid. Doan's Kidney Pills were so highly recommended that I got a box from the Bradham Drug Co. It did not take them long to restore me to good health."

Remember the name—Doan's—and take no other.

SAVED HIS WIFE'S LIFE.

"My wife would have been in her grave today," writes O. H. Brown, of Muscadine, Ala., "if it had not been for Dr. King's New Discovery. She was down in her bed, not able to get up without help. She had a severe bronchial trouble and a dreadful cough. I got her a bottle of Dr. King's New Discovery, and the soon began to mend, and was well in a short time. It's the most reliable remedy on earth for desperate lung trouble, hemorrhages, lagrippe, asthma, hay fever, croup and whooping cough, 50c, \$1.00. Trial bottle free. Guaranteed by all druggists.

To Keep From Moving.

"Now, you two children go to your room and see that you don't move for an hour," said the woman, out of patience.

YOUR NEIGHBOR'S EXPERIENCE.

How you may profit by it. Take Foley Kidney Pills. Mrs. E. G. Whiting, 360 Willow St., Akron, O., says: "For some time I had a very serious case of kidney trouble and I suffered with backache and dizzy headaches. I had speaks floating before my eyes and I felt all tired out and miserable. I saw Foley Kidney Pills advertised and got a bottle and took them according to directions and results showed almost at once. The pain and dizzy headaches left me, my eye-sight became clear and today I can say I am a well woman thanks to Foley Kidney Pills."—F. S. Duffy.

Why He Remained Home.

Model Husband (boastfully)—Yes, gentlemen, I've been married ten years and never spent a night away from home yet.

FOLEY KIDNEY PILLS

FOR URINARY TRUBLES AND BLADDER

LIGHTNING KILLS FEW.

In 1908 lightning killed only 169 people in this whole country. One's chance of death by lightning are less than two in a million. The chance of death from liver, kidney or stomach trouble is vastly greater, but not if Electric Bitters be used, as Robert Madson, of West Burlington, Ia., proved. Four doctors gave him up after eight months of suffering from violent liver trouble and yellow jaundice. He was then completely cured by Electric Bitters. They're the best stomach, liver, and kidney remedy and blood purifier on earth. Only 50c at all druggists.

The Harpers of Thirst.

In the oasis of Hagar, says L. Dow Covington in the Wilds World Magazine, we had a first experience of the desert traveler's great enemy—thirst. We were seated in front of a Bedouin chieftain's tent, and two baby camels enjoying their first drink of water since they had left Cairo, when, from across a sand dune, a Bedouin came staggering and tottering toward us. His eyes were bloodshot, his lips cracked their natural color, while his tongue, thin and dry, hung out of his mouth. Evidently he had fasted himself, had wandered around for days in search of water and had stumbled upon the oasis in the very nick of time. To allow him to drink would have been his death.

ARTIFICIAL EYES.

The Art of Making Them Resemble Their Human Patterns.

MATCH IN SHAPE AND COLOR.

They Fit the Eye Socket Perfectly and May Even Be Worn During Sleeping Hours—Made of Glass, For Which No Substitute Has Yet Been Found.

Germany leads all other countries in the manufacture of artificial eyes. The American consul general at Coburg relates that probably ever since the beginning of the world civilized people have endeavored to hide or remedy any flaw in their appearance, such as the loss of an eye would cause. How this was done by the various nations it is hard to say. Up to the present time no discoveries have been made that would offer enlightenment on this subject. There are, it is true, a few unauthenticated accounts as far back as the middle ages, but the first reliable report is given by the French surgeon Ambroise Pare in 1560.

Two kinds of artificial eyes were known to him, the ektelpharous and the hypopharous. The ektelpharous was made by painting the eye and all surrounding parts as far as the brows on a plate, which was placed in front of the eye socket and held in position by a string tied over the head. The hypopharous was used in a manner similar to that of today, being put behind the eyelid, in the eye socket itself, and was composed of a metal shell of copper, silver or gold, covered with enamel and glass faculae.

It was only at the close of the eighteenth century that these artificial eyes really became of practical use, it being then found possible to do away with the metal shell altogether and employ enamel and glass. The material used was a soft lead glass, easily shaped, but also easily fusible, and an eye had to be changed every three or four months to prevent the socket from becoming infected.

It is known that in the middle of the nineteenth century eyes were made by chemists in Dresden, Prague, London and Stockholm, and in Thuringia. The Thuringian makers were not enamellers, but glassblowers working in connection with the porcelain painting industry, whose endless and untiring experiment resulted in the discovery of an ideal material, cryolite glass, the use of which led to a new technique in eye manufacture. Moreover, there can now be produced all the characteristics of the human eye which had been possible in enamel work. The new prosthetic eye received the name "reform eye." To be of value, however, it must be made to exactly fit the eye socket.

Today it is possible to give to the reform eye any form and color desired, and in most cases it can be even worn at night, thereby preventing the lid from sticking into the socket and the lashes from sticking together. At times attempts have been made to replace the breakable glass by vulcanite or celluloid, but such efforts have long since been given up as useless.

In 1862 the method used in France for making eyes was as follows: On the broadly pressed end of a small, colorless, transparent rod of enamel the pupil was first made, and the iris was then formed on this by means of a small, thin pointed, colored enameled rod, the designing of the iris being made possible by melting the point of this rod.

In Paris the good eyes are now made. A glass tube, closed at one end and of the color of the sclerotic, is next blown into the form of an oval, and in the middle of this a hole is melted, the edges of which are rounded off evenly and pressed a little outward. The iris is then placed in this opening and well melted in. A thick coating of glass remains behind. The eye is rounded off, the projecting rim of the white coat is smoothed with a metal rod, and this coat is thereby joined to the sclerotic. By means of a thin, pointed red rod the blood vessels to be seen on the hard coat of the human eye are then made in. The superfluous back part of the eyeball is melted off, thereby giving to the eye the desired form. The eye is finally placed on hot sand, where it becomes gradually cooled off.

Glass eyes are made in quite a different manner in Lunenburg, the center of this industry in Germany, where their manufacture is altogether a home industry. The eyes are usually made by one member of a family, and the art is handed down from one generation to another. A gas flame is used for melting the glass. A small drop of white glass is put on the white blown ball from which the sclerotic is to be made and is then blown so as to make a circle about eight millimeters (3/16 inch) in diameter. On this circle the structure of the iris is built by means of variously colored glass rods. A drop of black glass makes the pupil. Over the finished iris crystal glass is melted in order to imitate the cornea. The further manufacture is similar to that given in the first description.

There is one modification that every family should be provided with and especially during the summer months, eye trouble certainly a sore children and diarrhoea Family. It is almost certain to be needed. It costs but a few cents. Can you afford to be without it? For sale by all dealers.
