Senators from each State? How many Representatives does your State send to Congress?

What State elects two Senators this year, and why? How many Senators are regularly chosen at a congressional election? For how long a term is a Senator regularly elected? What is the term of a Representative? When will the Representatives elected this year take office? In what Congress will they serve? When does the Sixty-ninth Congress come to an end? What political party has a majority in the present Congress?

How many States elect Governors this year? Is your State among the number? For how long a term does your State elect its Governor? What State elects its Governor for a three-year term? Does your State elect a Senator this year? If so, can you name the candidates for that office? Name the two Senators from your State. Who is Governor of your State? Can you name the Representative in Congress from your congressional district? Is he a Democrat or a Republican?

BEST FARM MEAT CURED AT HOME

Raleigh, N. C., Oct. 19.—The practice of curing a supply of meat for home use is more generally followed on the farms of the South than in any other section of the country, yet there are more different methods used in curing and handling the cured product than is best for the industry.

For that reason, the North Carolina Experiment Station has undertaken a study of the whole meat curing question. These studies have been summarized and published in bulletin number 249 of the experiment station series written by Earl H. Hostetler and L. H. McKay of the office of swine investigations. This bulletin is now available on request.

The authors of the bulletin give the results of work done since 1916 when the tests were first started at the Coastal Plain Station near Willard in Pender county. They discuss the factors affecting the shrinkage of meat in cure, show the kind of curing agents used and give some hints as to the best methods of curing and handling the meat as brought out by the various tests.

"In eight different trials, 86 hogs were used and a total of 516 pieces of meat were cured," says Prof. Hostetler. "We used both the dry cure and brine cure and also tested out the liquid smoke as compared with smoke from hickory wood. As a result of our tests, we do not feel that there is one best method of curing meat. Some like the dry cure best, while others like the wet cure. Some use only salt as the curing agent, while others use sugar and salt-peter as well."

HARVESTING GRASS SEED IN NORTH CAROLINA

Raleigh, N. C., Oct. 19.—It is the unexpected that always gives the greatest thrill and the unexpected has certainly happened in North Carolina farming this fall. Folks are harvesting grass seed for planting purposes in that same territory where grass has been fought as a mortal enemy for years.

"The demand for carpet grass and lespedeza seed for planting pastures in the Coastal Plain section of North Carolina has always exceeded the supply and the planting of pastures has been retarded because of a lack of such seed," says Sam Jones Kirby, pasture specialist at State College. With the increased interest in livestock farming and the actual demonstrated possibilities for making excellent pastures on otherwise idle land, it appears that the acreage to pastures will be doubled this season. To supply some of the seed to be used in planting these pastures and to increase the profit from pastures already planted, some leading farmers are harvesting the seed. One county alone will harvest some 5,000 pounds of seed."

ANNOUNCEMENT NO. 3

Open Cars Can Now Be Had In Colors

Roadsters and Touring Cars are now coming through with attractive Copra Drab and Olive Green bodies with fenders and appointments in black. These combinations lend a pleasing effect of refinement to these cars that has been found, heretofore only in cars of much higher price.

This is another of the very recent improvements that Ford Motor Company has added to the already greatly improved line of Ford cars.

FIRST: The announcement of all cars coming out with Pyrolaxin paint.

SECOND: The Vaporizer was added.

This revolutionized operation, giving more power, leaving less carbon, produced smooth pick-up and increased gasoline mileage.

NOW any type car can be had in pleasing color combinations.

AND YET, WITH ALL THESE IMPROVEMENTS THERE HAS BEEN NO INCREASE IN PRICES
LET US SHOW YOU THESE CARS

An Idea Paying Dividends To You.

There are millions of people who have never heard of Kemmerer. It is not probable that more than a comparatively few thousand people will ever see Kemmerer.

And yet, in that small mining town up in the foothills of Wyoming, an idea was born in 1902 that has since been the means of saving many millions of dollars to great numbers of people.

When the First Store of this nation-wide institution was opened, there were those who said that while its policies were ideal it could never prosper and be guided wholly by the principles of the Golden Rule.

But it did. It went on year after year, adding one branch store after another, serving more and more people, ever enhancing service and savings to the public, until today the activities extend from coast to coast.

You are benefitting today from that idea.

Three methods of harvesting the seed are described by Mr. Kirby. Dr. S. H. Crocker of Wilson county, uses a seed pan which he ran over two and one-half acres and saved 550 pounds of carpet grass and lespedeza seeds. These he sold at his barn door for 50 cents per pound. The Invershield Farm of Pender County clipped the heads of the grasses with a mowing machine while dew was on the grass and then harvested the seed with a flail when the heads had dried. The third method, used by other farmers, consists of mowing the heads and raking them after which the whole amount of straw and seed are hauled to the new area and scattered over the land. This latter method is the least expensive and while some seed are killed during winter, enough remain viable to give a good stand of grass and clover.

Mr. Kirby states that there are many pastures free from weeds from which seed might be harvested profitably.

There is a market for all surplus poultry and eggs. Fifty hens to the farm is not an unreasonable number.

HOW MANY DO YOU KNOW?

How often are congressional elections held? On what day are they held? What date is that this

year? Do all the States hold their congressional elections on that day? What is the total membership of the national House of Representatives? Of the U. S. Senate? How many
