NO. 33

OFFICIAL ORGAN OF THE UNIVERSITY OF NORTH CAROLINA ATHLETIC ASSOCIATION

N. C. HIGH SCHOOL BULLETIN

FOR UPBUILDING NORTH CAROLINA'S HIGH SCHOOLS

First number an excellent issue
Edited by Professor N. W. Walker

The first issue of "The North Carolina High School Bulletin," has just been mailed. This bulletin is to be published quarterly by the University and is edited by Prof. N. W. Walker. The object of the publication is to assist in the upbuilding of North Carolina's high schools.

The contents of the first number are: "The Significance of the Public High School Movement in the Southern States," by Prof. Walker, "Choosing a Profession," by Dr. Venable, and "What Becomes of Our High School Students," by Supt. R. H. Latham, of Weldon, N. C. There are many interesting tables of statistics that show the wonderful advance made by the public schools in Southern States, especially by North Carolina; as for example, in 1890 there were in the public schools of North Carolina 349 students, and in 1908 there were 4,856. There is also contained in the bulletin an account of the conferences of high school principals in which it is of interest to note that each executive committee appointed contains a university student who has graduated in the last three years. The announcement is made that the summer school for teachers will again be in session at Chapel Hill during the coming summer.

N. C. MEN AS COACHES

THREE MONOGRAM BASEBALL MEN COACHING AT COLLEGES

"Fie" Fullenwider, Louis Hobbs, and Andy Roth teaching youngsters the art

Newberry college will be in the hands of "Fie" Fullenwider, who reports to Chattanooga this season, going to the Lookout City with the Little Rock club. Fullenwider is a good baseball man and will make the Lutherans a good coach. The club itself is expected to be strong. With four of the best of the 1909 team back in college, and with an abundance of new material the Newberry team—always a strong aggregation—is expected to be in the running again. H. B. Wessinger is the manager of the team.

Andy Roth will coach the Wofford team, while Tommie Stouch will be in charge of the Furman candidates. Both are managers of the Carolina association teams in the towns in which these institutions are located, and will be able to give their college duties much time. The selection of these experienced men should insure the two colleges a good knowledge of the game, if the material to fit out good teams is on hand.

Elon College, Feb. 21.—The interest in athletics is increasing day by day and will burst into fever heat when the new coach, Mr. L. L. Hobbs, Jr., of Guilford College shall have arrived. Mr. Hobbs is no stranger to baseball in North Carolina, and it is expected that he will do efficient and effective work in the position to which he has been called by the athletic association. Already several practice games of baseball have been arranged for the coming season. It is not the intention of the college to put out a regular college team this year, but to put out a team which will play practice games with other institutions and looking to the putting out of a regular college team in 1911. This decision has been arrived at after careful consideration of the evils of professionalism in college athletics which will be eliminated from the team this year. By 1911, the athletic authorities hope to be able to put out a winning college team, absolutely free from professional players, which can make a creditable showing with the other college teams of the state.

Illustrated lecture

The Geological Seminary, one of the oldest scientific organizations in the university, enjoyed an illustrated lecture by Mr. H. N. Eaton last Tuesday night. The subject of the lecture was, "Geology of the Rocky Mountains in Montana." Mr. Eaton spent a portion of last summer in Montana with the Harvard School of Geology and prepared a somewhat detailed section of Sphinx mountain on the borders of Gallatin Valley. He brought back with him rock specimens of each formation represented, from Archean crystallines to the glacial drift of the Pleistocene Age. While Mr. Eaton's lecture was rather too technical for the uninitiated to thoroughly enjoy, the geology students present enjoyed

BRILLIANT RESEARCH WORK

DRS. DOLLEY AND MACNIDER DOING SPLENDID WORK

Dr. Dolley on the work of the nerve cell. Dr. MacNider on the kidney cell

For sometime there have been in the University two scientists not without honor, except in their own country. Drs. Dolley and W. B. MacNider, of the medical department, have been for some time engaged in research work which bids fair to bring them fame. Both these doctors are young men who have for some time been members of the University faculty.

Dr. Dolley's studies are concerned with the way the nerve cells do their work. He finds that nerve changes vary with activity, over-activity, and fatigue; that fatigue and exhaustion have their physical basis in the nerve cells; that the condition of surgical shock has an anatomical rather than a physiological basis. This simple principle of nerve fatigue will undoubtedly be of wider application to numerous other diseases of the nervous system. It may explain some types of insanity which cannot be explained by gross anatomical changes. It may interpret such simple conditions as hysteria and the milder types of nervousness. Dr. Dolley has explained his theories in articles in The Journal of Medical Research and The American Journal of Physiology, and by addresses before the American Association of Pathologists and Bacteriologists. In March, Dr. Dolley in association with Dr. G. W. Crile, of Western Reserve University, will demonstrate his ideas at John Hopkins University.

Dr. MacNider's highly successful work concerning tonsillitis has inspired him to search into the deeper mysteries of kidney disease. In his study of the recuperative power of kidneys that have been injured by restricting the blood supply he finds that the usual changes which are supposed to develop and were supposed to be final, namely, death of kidney tissue, and are only the preliminary stages of the process; that the kidney tissue which has been regenerated differs in many particulars from normal kidneys and that the condition resembles rather closely some of the common types of Bright's disease and is likely due to a blood supply which is inadequate to properly nourish the kidneys. In his study of the influence of the size of the kidney on the power of that organ he finds that in many cases of acute Bright's disease the secretion stops when there is an adequate amount of blood; that the disturbed function of this organ is due not so much to an abnormal blood supply as it is due to a swelling of the cells. The fact of a disturbed function as caused by this swelling of the cells has been proved experimentally by Dr. MacNider and will probably be of some practical value in relief of the acute conditions of Bright's disease.

it very much. He made more plain his words by the aid of some excellent lantern slides.

CASES FOR NEW LAWYERS

TWO TARBORIANS ON OPPOSITE SIDES OF THEIR FIRST CASE

Perry has three cases. Other men are hustling some

The representatives of the University Law School who have hung out their shingles since the last Supreme Court examination have gone into their professional work with a vim that promises well. H. L. Perry, who has located in Henderson, has had three cases. Two young Tarborians, barristers of three weeks standing, have already had a case, nay, have opposed each other on the same case. G. W. Fountain represented the state and Don Gilliam the defendant in the trial of a negro woman accused of selling liquor and the state was the victor.

Both of these young men are practicing in Tarboro, Fountain in partnership with his father, G. M. T. Fountain, and Gilliam with his uncle, Henry Gilliam. W. R. Dalton chose Reidsville for the scene of his first forensic attempts. J. D. McLean has become a member of the well-known Laurinburg firm, McLean, McLean and McCormick. J. C. M. Vann has located in Monroe. D. B. Todd is doing business at Jefferson, in Ashe county. C. E. Carpenter practices in
