**SECRETS OF THE NEW WOMAN'S  
DORMITORY ARE BELOW DIVULGED**

Future Co-Eds Will Dwell In Almost Eastern Luxury—  
Faithful Old Russell Inn Bath Tub Will Be Suc-  
ceeded by Nine New Tubs and Three Showers  
—French Doors Installed for Matron's Sake.

At the present rate of progress, the Woman's Dormitory should be ready for occupancy at the beginning of the first summer school, according to H. D. Carter, of Atwood and Nash.

The general plan of the building is in the form of the letter H, the front being three sides of a fore-court and the entrance in the center of the crossbar of the H. The building is three stories high with basement and usable attic. The attic, however, is not to be finished at the present time, there being three floors of finished rooms. The style of the building is colonial, carrying out the tradition of the majority of the campus buildings with the same standards for fire proofing and stability as are in Dormitories, F, G, and J, though the interior detail is somewhat more delicate, the architects having tried to give the building both inside and out a more intimate appearance than was possible in a dormitory for the boys, intending to give the impression of a rather large dwelling and less of an institutional building. The brick is laid up in Flemish Bond as was common in the colonial period and the trimmings are of white marble. Flanking the main front on the east and west sides are two ample brick-paved porches providing plenty of open space for the occupants and serving to enrich the appearance of the building.

**Parlor for First Floor**  
On the first floor is a parlor thirty-five by eighteen feet with an adjacent alcove twelve by twelve. The room is ornamented with columns and pilasters in the Doric order, serving to lend interest to the interior, and also has a wood cornice in the same order. The middle section, or cross-bar of the H, is taken up by a living room. This living room is forty-two by twenty feet with a fireplace in the center of the long side. This room is flanked by alcoves in a manner similar to the parlor and has windows on both of the long sides, the center entrance doorway opening directly into this room. In the west wing are provided a matron's parlor, bath room, and bed room.

**French Doors for Matron**  
French doors connect this matron's parlor with the hall and the living room, thus giving the matron practical supervision of the hall, parlor, and living room from her parlor. In the east wing are located a kitchen twenty-three by twenty-one, a pantry ten by twenty-one, refrigerating room nine by twelve, and a storage room of similar size. Access is had to the basement from the kitchen. The kitchen communicates with a pantry or serving room ten by twenty-one and this in turn to a dining room thirty-seven by eighteen with an

alcove twelve by thirteen. A servant's porch is provided across the entire back or south side of the kitchen and the cellar way leads out of the porch so that it is not seen from the outside of the building. It is intended that this portion shall be entirely latticed and screened in, to add to the comfort and neatness of the servants.

Two fireproof stairways lead from the first to the third floor, one in each wing. These stairways are of similar design to those in Dormitory F, but rather more elaborate as to detail.

In the south end of the west wing is provided a men's coat room and men's toilet room for the convenience of the occasional male caller.

A trunk lift is also provided so that trunks can be delivered at the rear door and taken directly to the trunk rooms on the second or third floor or to the attic, so that there will be no necessity for the girls keeping trunks in their rooms.

**Many Bath Tubs**  
The second and third floors are identical in plan, each floor having fifteen double rooms and two single rooms. Each room is provided with a closet for each occupant. A lavatory with hot and cold water is also provided in every bed room. Three tubs, one shower, and other ample toilet facilities are provided on each of the three floors, while the two fireproof stairways lend easy access to the ground from any part of the building.

It is not intended at this time to finish the attic. When this is done, ten more bed rooms will be added, together with a kitchenette and laundry, all on the same general lines as the rooms below. It is understood that sufficient space will be finished at present for the laundry having set tubs, boiler, ironing boards, etc, for which the future occupants of the building are now trying to raise money.

In the basement is located a coal bin, heater, hot water heating boiler with five hundred gallon tank connected, servants' toilet, and storage room; the basement floor being concreted and the rooms well lighted.

The grounds are to be landscaped by co-operation between Dr. W. C. Coker and Atwood & Nash, Inc., University architects, a gravel terrace leading entirely across the front of the building with walk to the street, while the service drive passes to the rear.

The building is designed so that the wings can be extended in the future to the south almost to the Arboretum wall and thus triple the capacity of the present structure.

Warren & Wetmore, Architects

Architecture—Today and Tomorrow  
THE great buildings of today, designed in masses which rear rugged, mounting profiles into the sky, foretell even greater and more massive structures for the next half century. Always a close co-ordination of architecture and engineering, of design and construction, the architecture of the future will find architect and engineer working ever more closely together. Certainly modern invention—modern engineering skill and organization, will prove more than equal to the demands of the architecture of the future.

**Will Beautify Chapel Hill  
to Durham Road**  
Plans for beautifying the Durham-Chapel Hill boulevard to make it one of the most attractive of all the state highway systems were considered last week at a meeting of the civic department of the Woman's Club of Durham. Many excellent suggestions were offered for beautifying the boulevard by members of the Durham department as well as by the representatives of the Chapel Hill clubs.

The members were so favorably impressed with the plans that a committee of five women was appointed to work with a similar committee to be appointed by the Chapel Hill clubs to take immediate steps to carry out the club's plans.

The women of the two communities have set for themselves the task of making the Durham-Chapel Hill boulevard eventually a model highway.

The plan for paving the Durham-Chapel Hill road was first agitated some time ago, and a plan was also suggested for making the highway attractive through the planting of trees, and the installation of a white way system was considered. A number of trees were planted along some sections of the road, it is understood, but no great or outstanding effort was made to make the highway the beautiful one suggested.

**Will Soon Have  
Roof on Sigma Nu House**  
The end of this week will see the roof on the new Sigma Nu fraternity house on Fraternity court, which is just off Columbia street. The building was designed by Atwood and Nash, Inc., University architects, and is being built by B. S. Thompson, local contractor.

The design is colonial, there being a two story portico along the front with the roof supported by six Doric columns, the floor of the portico being paved with brick. The main building is 56 feet long by 30 feet wide, of brick, three stories high. Flanking this main unit are wings of wood each 12 by 26 feet. On the first floor is a living room 33 by 26 feet, with a large fireplace at the south end, a library 12 by 19 feet and a bedroom 12 by 14 with a toilet room adjacent. The living room is designed for fraternity dances, the first floor being level with the portico floor.

One wing contains two study rooms and the other two bed rooms.

On the second floor there are five bed rooms, a main bath room and two sleeping porches in the wings. The third floor is one large room which can be used for fraternity meetings or as additional sleeping quarters. Provision is made on the first and second floors to house 27 members and should the third floor be utilized for sleeping quarters 20 more can be accommodated.

The building from its location at the end of the court and the massing and design of its finish will be a distinct addition to the newer fraternity buildings at the University.

Seven grammar school and two high school swimming pools are under construction in Buffalo, N. Y.

A DICTIONARY OF AMERICAN  
ENGLISH  
A comprehensive study of the English language in America, the result to be the first "Dictionary of American English," will be undertaken by the University of Chicago. The proposed undertaking will include a study of American dialects and their sources and the effect of immigration upon the language. The work will involve vast research by a large staff and will require at least 10 years for completion.—School Life.
