

## STATE OFFICIALS WILL VISIT LAW CLASS THURSDAY

Legislators Among Those Invited To Discuss Administration of Justice.

The Law School, according to an announcement by Dean C. T. McCormick, will be host on Thursday, April 17, at 2 o'clock, to a number of state officials, leaders of the North Carolina Legislature, and professors and students of legislation, when the April meeting of the Law School course in the Administration of Justice will be devoted to a study of the scientific drafting aspect of Statute Law making.

Those who will contribute to the discussion out of their experience in legislative matters will be R. T. Fountain, of Rocky Mount, Lieutenant - Governor and president of the Senate; A. H. Graham of Hillsboro, Speaker of the House of Representatives; H. M. London, of Raleigh, Legislative Reference Librarian; S. C. Brawley of Durham, State Senator; Willis Smith of Raleigh, State Representative; Dan Boney of Raleigh, Insurance Commissioner and former Legislative leader; H. G. Connor of Wilson and Walter Murphy of Salisbury. Professors R. D. W. Connor and E. J. Woodhouse, of the University's Department of Government, will take the point of view of the political scientist, and Professor Woodhouse's class in State Government will be presented.

The problems will be presented, through six papers of ten minutes duration each, prepared by students in the course in Administration of Justice, under the direction of Professor M. T. Van Hecke of the law faculty.

They are as follows:

1. The Parliamentary Counsel in England, by J. A. Williams.
2. The Legislative Counsel of the U. S. Congress, by J. A. Mullican.
3. State Legislative Reference and Drafting Bureaus, by W. L. Marshal.
4. Training for Legislative Service, by E. F. Taylor.
5. The North Carolina Legislative Reference Library, by Frazier Glenn.
6. The Need for Improvement in North Carolina Legislation, by B. T. Lord.

## Mr. Leonard Seeks Accommodations For High School Week

Grady Leonard, as chairman of the entertainment committee for High School Week, wishes to ask that all students who can accommodate any of the visiting high school students in their rooms during High School Week will please call at the Y tomorrow and leave their names and addresses.

Many students will be coming up here from the "hometown," and it is Mr. Leonard's hope that if possible, these students be entertained by the members of the student body from the towns from which the visitors come. If necessary, beds can be put in the rooms of those wishing to take in some of the high schoolers. Linen for the beds, however, must be furnished by the students.

Most of the newcomers will be coming to the University for the first time, and it is the wish of the committee that the student body make these visitors feel perfectly at home. High School Week begins Wednesday, April 16, and continues throughout the week.

At the commencement exercises of 1911, 122 degrees were conferred.

## COKER BEAUTIFIES CAMPUS GROUNDS

"Only Avenue of Gum Trees" Is Planted Along Route 54 from Pittsboro Road to Athletic Field.

Spring work on the beautification of the campus under the direction of the Committee on Grounds and Buildings in charge of Dr. W. C. Coker, has been completed.

Several walks through the campus and Route number 54 directly in the rear of South Campus have been lined, with hardy, fast growing, trees, intended to fill in the more sparse sections of the grounds.

The inner side of the two walks leading from Old South building to the new Library have been planted with willow oaks. Because of the nearness of these paths to the buildings, the outer edges could not be planted.

The "only avenue of Sweet Gum trees" ever seen by Dr. Coker has been planted along Route 54 from the Pittsboro road to the athletic field. This avenue has been lengthened to extend more than a mile from the athletic field by Dr. Coker himself, but the specie used were willow oaks.

Cypress trees have been placed in the back of the library and around the chemistry building. Besides these trees, several clumps of black birch have been planted in the same locality.

Shrubberies and trees planted around the campus have been furnished by the University propagating grounds in the rear of Peabody building. The black birches were transplanted from the surrounding creeks, and most of the other trees used were made available through the kindness of Dr. Coker, in donating them from his own Emerson Farm.

## ZANHEISER SAYS CHURCHES SHOULD COOPERATE MORE

"Protestantism must get a new technique," stated Dr. Charles Zanheiser in a talk to a joint meeting of the three Y cabinets last night at the Y after having been introduced by Parson Moss of the local Presbyterian church.

Dr. Zanheiser, traveling secretary of the Federal Council of Churches, has been making a tour of the south, talking in the larger universities and colleges. For the past two or three days he has been at Duke, and from here he will go to Vanderbilt University, Nashville, Tenn.

Continuing further on the subject of "The Progress of Cooperation Between Religious Bodies," the speaker was of the opinion that Protestantism was in grave danger in that it was now becoming a cast institution. He stated that it was working in only a few areas and was leaving the other areas untouched.

"If we must measure up to this new industrializing age, we (the churches) must get together," said Dr. Zanheiser. He stated that he was not here speaking of a union church, but rather a cooperation of all the different denominations for one common need. "This," continued the speaker, "is the only way that we are going to succeed."

He stated further that in the past most of the conversions had been made in revival meetings, but now this method does not work. To get conversions now, Dr. Zanheiser believed that it was necessary to go out and have personal talks and personal contacts with the people.

Another fault that the speaker mentioned was that the church was failing as a gospel selling agency. "It is the duty

of the church to spread the gospel," he continued, "but in this it is failing."

After giving many vivid examples of some of the good work that he had seen done in some of the "slums" of Pittsburgh and New York, Dr. Zanheiser concluded his talk by answering a few questions of the cabinet members.

## McCall Discusses Family Automobile

"The Family Automobile" is the title of an article by Professor Frederick B. McCall in the April issue of The North Carolina Law Review which is now being distributed. In this article are discussed the recent developments and changes in the laws fixing responsibility of the owner of an automobile while it is being operated by members of his family. The article is general in its scope and includes cases and statutes from all of the states. It shows the constantly changing state of the law in this unsettled field of litigation.

The leading article in the April issue is by Judge J. Crawford Biggs and deals with "Federal Practice and Procedure." Judge Biggs, an authority on this subject, limits his observations to the civil side of the docket, and his remarks are an especially valuable source of information upon a field or prac-

tice constantly increasing in importance.

Suggestions for a Department of Justice for North Carolina are made in a series of papers presented in the Open Court section of the issue under the heading "A Ministry of Justice." In these papers law enforcement methods in England, France, the United States and North Carolina are compared. These papers grew out of a Uni-

versity law school course on "The Administration of Justice." Seventeen students contribute articles on recent decisions of the North Carolina Supreme Court, United States Supreme Court, and other courts of final jurisdiction in the southeastern portion of the United States. This includes discussion of recent decisions in the field of Air Law.

L. P. McLendon of the Dur-

ham bar reviews Professor McIntosh's "North Carolina Practice and Procedure in Civil Cases;" and Charles W. Tillett, Jr., of the Charlotte bar, reviews Osborne's "Question Documents."

## DEAD METAL LEAPS TO LIFE at the hands of Westinghouse engineers

The 55,000 kw. turbine generator units that Westinghouse built for the River Bend station of Duke Power Company are the largest in the South.

IT is engineering that breathes the spark of life into lifeless metal, that converts it into active machinery, that makes of it an adaptable servant. One essential ingredient of that engineering is imagination. A second is rational thinking, the object of your technical training. And the third is teamwork.

In the development of the 55,000 kw. Duke Power Turbines, teamwork extended back to the date when George Westinghouse brought the steam turbine to America. It included men who have made life studies of vibration, of blade design, of the effects of superheated steam on metals; men who know how to make huge castings, the packers who have mastered the science of shipping giant

machinery. And it took in also the business men who create a market for such machinery and who cement together the many-fold activities of the Westinghouse institution.
