Atomic Research Proves Motor Conditioner

Metallic tabs dropped into fuel tank last for 200,000 miles—raising compression—saving gas and oil.

For more than five years the product of a manufacturer in Southwest U. S. has revealed to users in several states another wonder of the 'Atomic Age.' At the surprising cost of six dollars to the user, the valves and rings of his car can now be maintained at practically their original 'newness.' The worn parts in older motors are replaced by this product—as you drive—constantly adding power to the motor—as piston compression checks from time to time will show. No work or equipment required. Just drop all tabs into fuel tank.

The manufacturer guarantees Motaloy's effectiveness. It is also guaranteed to be harmless to any fuel system, and to any internal combustion engine. Trucks making less than eight miles per gallon require the \$7.50 size. Large trucks—(saddle tanks), \$12.00. Lawn mowers, \$3.50. Autos \$6. N. C. Motorists can now be supplied. Include brief description of your vehicle and 3% tax.

in each division awarded a prize. Later McElroy released a statement to the press in which he said he hoped neither party would try to capitalize on the idea.

At Thursday night's Legislature meeting, McElroy introduced a bill asking for some \$69 to buy bronze cups which will be awarded winners in the respective divisions.

The UP also introduced a bill initiating the same competitive program, not only among dormitories, but among fraternities and sororities too.

Whereupon McElroy released this statement:

"I intend to introduce an amendment to my bill concerned with scholarship cups to award a cup to the fraternity and to the sorority with the highest academic average. The bill as originally written contained such a provision, but I understood incorrectly that such cups were already awarded to a fraternity and sorority."
