Lack Of Leadership

The Visiting Committee of the Board of Trustees comes to campus today amid the greatest student crisis in a college gen-

Student leadership is crippled, and student self-government has slipped and broken its backbone.

Perhaps some of the visiting trustees will feel that we exaggerate, for few students are aware of this crisis. But in that very fact lies the problem. Students lack leadership in their affairs-and they don't even realize it,

The University student body enjoys unique rights of selfgovernment, making their own laws in the area of student affairs and appropriating a \$100,000 budget each year with no faculty or administrative control. As a system, the Carolina Visitors from the Board of Trus- way is ideal and affords the best training in citizenship and government imaginable.

But, in the short span of a few years, the elected leaders of One member of the group, Vie- this campus have forgotten their mission to lead.

A referendum notion of popular sovereignty has made the of editor candidates for The Daily student President ineffective. Lack of interest has turned the Tar Heel up to a Selections Board. student Legislature into a debating society thickly populated and by listening to President Don The group will meet from 10 with inexperienced freshmen and sophomores and well out Fowler's State of the Campus Ada.m. until 5 p.m., with two hours of contact with the mass of students. And the campus judi- dress. ciary groups-the last stronghold of leadership now-have al-The group is the subcommittee lowed themselves to get hopelessly aloof from their constitu- creation of a Constitutional Re-

The Campus Crisis: Fowler Blasts Editors For 'Irresponsibility,' Urges Off-Campus Lot

In Campus' Address To Legislature

By NEIL BASS

The student Legislature closed out its 19th Assembly last night by passing a bill to leave the selection

The legislators also approved the visional Commission for the purpose of suggesting "revisions" to the present Student Constitution.

President Fowler, who touched on six major areas involving student government and the student

"This year, we have all been appalled not only by the inaccuracy in the comparatively simple job of by the juvenile antics of the editors," Fowler asserted. He lambasted the editors further by saying, "The members of our Legislature should continuously guard against such blatant irresponsibili- plete itemized and signed state currence the candidate will be disty which can only reflect discredit ment of expenditures must be qualified, said McLean. to our school."

IT'S NOT FROST:

Why Do Leaves Fall? **Botanist Gives Answer**

By W. A. VAN TREUREN

Contrary to what some believe, frost does not start the process that sends the leaves of campus trees tumbling to the groend. Frost only kills the leaves.

The real answer as to how soon students can expect to see the trees base is as follows, according to Dr. C. R. Bell of the UNC Department of Botany.

In the fall of the year, a number of cells at the base of the petiole (leaf stalk) become markedly different in their makeup and form a layer of thin-walled

this leaf abscission layer starts when the days of fall become shorter. If a dry spell lasts very long the leaf abscission is speed-

cells called the abscission layer

In a lot of trees such as those

on the campus, the formation of

across the leaf stalk's base.

The abscission layer begins to break up soon after it has formed because of the separation of the cell walls. This breaking up goes on until the leaf hangs on to the stem only by strands of conducting and strengthening tissues called vascular bundles of the leaf's stalk

The frost and winds now step in to break up the abscission layers and vascular bundles. When this happens the leaf falls to the ground.

If yoc examine the spot where the leaf was hopefully hanging on, you will see that a layer of bark-like cells has formed a protective covering over the leaf scar. The shape of this scar denotes what kind of tree it is, just as did the leaf.

If you go to the tropics, you will find the same process going on in absence of the frost. When you see leaves hanging ing on in defiance of the winds and rains you can conclude that

the abscission layer failed to

form or that the vascular bund-

les of the petiole didn't break. The leaves you see on the ground fell because it was the end of their growing season, just as humans die because of

old age.
