A threat and a promise. The threat of atomic radiation to the world. The promise of the United Nations and of a World Community.

The are the challenging topics that Dr. Ralph E. Lapp, physicist recently returned from the Geneva Atoms for Peace Conference, and Dr. Frank P. Graham will discuss during the Wednesday night session of the Caroina Symposium.

These are the signs of the atomic era.

Over ten years have passed since that August day in 1945 when Hiroshima, Japan, was nearly destroyed by an atomic blast.

The ashes and rubble that marked the Japanese city then heralded an undaralleled savagery in the art of warfare. Although Hiroshima today is largely rebuilt, scars remain of history's first atomic explosion used against man. Foundations of bombed out buildings were still evident as late as 1953. MONUMENT

Hiroshima is a monument to the beginning of the atomic age, but even as it is a monument to destructiveness, it is, too, a monument to progress. In the decade since Hiroshima, the United States has turned more and more to the peaceful utilization of atomic energy.

A recent seminar at Chapel Hill on the public health implications of the nuclear power industry stressed this nation's need for nuclear power and the necessity of the states assuming the share of the responsibility for administering a peacetime atomic program.

Henry J. L. Rechen of the Radiological Health Branch. man will take his leave next fall to U. S. Public Health Service, Washington, told the that "the nuclear power industry, which now exists only as our greatest national experiment Dr. Keller and Dr. Holman will should receive every encouragebe on leave during the spring ment that it can be given, finansemester, 1957, working respectively on a book on "the brief narracially and legally.

"By the end of another generation," he warned, "the depletion and on a biography of William of oil and gas reserves in this nation may be so serious that Foreign study and teaching will coal will have returned as our be carried out by several of those principal source of industrial on leave, one of whom, Dr. Nor-

### power." PEACEFUL USES

Rechen pointed out that as the competitive picture becomes more favorable to nuclear power, expansion into fields other than the generation of electric power will follow. "These include food sterilization, space heating, chemical processing, and civilian

mobile power sources," he said. He also discussed the problem of nuclear reactor wastes, and their "potential effects upon the public health, which place a severe limitation on the freedom of operation of nuclear in-

### Student Council

The Student Council selections board will hold interviews Thursday from 4 to 5 p.m. in the Woodhouse Conference Room of Graham Meforial to endorse women students interested in running for Student Council

One seat is open in the spring elections.

Rechen stressed that "a new group of public health administrators, physicians and engineers must grow up with the industry, to provide sensible and foresighted protection for the public health."

In fact panelists at the Nuclear Power Seminar in Chapel Hill called for immediate action by the states toward supervision of power uses in industry to supplement Federal control of radiation use.

Mrs. Clara M. Beyer, associate director of the Bureau of Labor Standards in Washington, warned that "if the states are to enter the program of atomic energy supervision, it must be done

"If you wait five years," she continued, "the Federal Government will have set up staff members throughout the nation. It is now time for the individual states to acquire their embryonic staffs and to demonstrate their competency in radiation regulation."

### STATE PARTICIPATION

Dr. Donald Chadwick, U. S. Public Health official from Concinnati, emphasized that the AEC could not cover the whole program of nuclear power in industry, "for It also has shortages of personnel and funds. A real need for state participa-

tion exists," he said. Afterwards, Mr. Rechen told the panel that "there will be no fight over radiation supervision, but rather a dovetailing of state and Federal activities," He added that the AEC wants the states to take the initiative in equipping themselves for the job.

Just how far the peacetime use of atomic energy is progressing is indicated by the fact that the first atomic energy reactor specificaly designed for medical treatment is under construction at the University of California in

Los Angeles. The reactor is being built by North American Aviation, Inc., and will be completed in about a

### MEDICAL SCIENCE

According to Dr. Stafford L. Warren, Dean of the U.C.L.A. Medical School, the new reactor "will give medical science a powerful new tool for research and

cancer the apy.' In the state of California alone, two atomic reactors are already in operation and a third, designed to be operated as a part of the AEC's program to develop economical production of electricity from atomic energy, will

go into operation next year. All of these wate built by North American. The same company is building another for the Armour Research Foundation of Chicago, which will be completed this spring. This reactor will be used for a wide variety of research in the industrial field.

### (See ATOMIC, Page 4) March Birthdays?

Do you feel alone in crowds? Did someone forget your birthday last year? Don't let it happen this year? Two graduating seniors, in an ambitious attempt to make their last college birthday a memorable affair have

concocted a fantastic scheme!! Their plan is to have a gigantic birthday celebration with all students who also have their birthdays in March. The party is planned for Friday night.

This can be your birthday party. Students interested in joining in this March mayhem, were urged to contact either Ruth Lott at 8-9023, or Ken Anderson at 8-9033 today.

## IN THE INFIRMARY

Students in the Infirmary yesterday included:

Daniel L. Sherrill, Elijah F. Vester, Jr., Robert E. Cooper, Harry S. Turner, Miss Alice Healy, William B. Akin, Jr., Peter M. Pollander and Douglas W.
