IF YOU COULD CHANGE ONE THING ABOUT UNC SUMMER SCHOOL, WHAT WOULD IT BE?

Janice Townley, an English major and a junior at La Grange college in Georgia:

"They should have air-conditioning in all the classrooms. I wouldn't change anything else—the rest is fine."

Paul Sylvester, a graduate of the law school preparing to take his bar examination:

"There should be more organized activities. There haven't been enough organized activities. We need more concerts and activities of that sort and perhaps more organized athletics."

Laura Fox, a history major and a senior at Mary Baldwin College in Virginia:

"I think there should be more places to eat. There's not enough variety in restaurants."

Martha Mills, majoring in primary education and a sophomore at WC:

"I'd have air-conditioning in the classrooms and in one room in Saunders in particular. The temperature in most classrooms is unbearable."

Coed Kills Self In Dorm

Rosalyn Lane, 20, a UNC summer school student, committed suicide when she hanged herself in her room in Spencer dormitory Monday morning.

Her body was discovered at 11:15 a.m. by the floor maid.

Friends who had been with her only a few moments before the suicide, said they noted nothing unusual about her behavior when they left her.

A rising junior and history major at Women's College in Greensboro, she was attending both summer sessions here.

She had been crippled for several years following an attack of polio.

Her family lived in Greensboro until a few years ago when they moved to Elba, Ala., where her father, Thorne Lane, is a newspaper editor.

Coastal Vegetation Studied By Profs

North Carolina's coastal vegetation received close study last weekend by college teachers participating in a National Science Foundation summer botany conference here.

The field trip was led by Dr. A. E. Radford, plant ecology specialist and professor of botany. Before the three-week program ends on August 14, the teachers will spend a weekend in western North Carolina, observing mountain flora.

This week the conferees, who are 24 selected teachers from liberal arts colleges, teachers colleges or juniors colleges, will hear guest lectures by two prominent scientists from Duke University.

Dr. Lewis E. Anderson, professor of botany at Duke, spoke last week. His talk concerned the biology of mosses.

Tonight, Dr. Henry J. Oosting will speak on "American Ecology and Ecologists." He is head of Duke's Department of Botany.

Among conference participants are three North Carolinians: Dr. Mary Caughey Helms, associate professor of biology, East Carolina College, Greenville; Mrs. Helen H. Muldrow, associate professor of biology, Elizabeth City State Teachers College; and Mrs. Violet G. Washington, instructor in biology, Johnson C. Smith University, Charlotte.

Participating from South Caro-

lina is Harry D. Dobbs, associate professor of biology at Wofford College in Spartanburg.

Fourteen other states are represented among the participants, each of whom receives a stipend from National Science Foundation funds, travel allowances and other benefits.

PISGAH FOREST INN

Rustic, cool restful. Enchanting view. Meals or lodging, \$11.00 per day, American plan.

Located atop Mt. Pisgah.

P. O. Box 433, Rt. 1, Candler, N. C.

Professor Heatwave

Dear Professor Heatwave: Don't any of these adult western duels end in a tie?

They draw so fast that it looks like both men would be shot.

But the way television shows it, the good man is a little bit faster

each time. Yet both men draw like lightning.

The way I figure it, the split-second timing in shooting from the hip ought to result in more simultaneous killings of both parties to gun duels.

TV Western Fan

Dear Fan:

The sponsors won't permit the good guy to get killed. That's the reason for one man being faster on the draw, consistently, and all the time. The hero can get shot in the arm, break a leg, conked on the back of the head, knocked down and trampled on. But you can't kill the hero—he's got to ride again next week.

Dear Prof. Heatwave:

A new rumor is circulating here that the Research Triangle may become the 51st state in the union. Do you think there is anything to it?

R. Monger

Dear Mr. Monger:

It's doubtful the Research Triangle could be admitted as the 51st state. You know how long it took to get Alaska and Hawaii admitted. Another drawback would be that Raleigh already is the capital of North Carolina and would have to secede if the Triangle became a separate state. If it doesn't happen, though, I'd suggest the new capital be located at Nelson.

Dear Prof. Heatwave:

Here is one for your suggestion box: let's convert the Arboretum on the campus into a parking lot. It would give adequate spaces for cars and relieve traffic congestion. It wouldn't be necessary to cut down all the trees and shrubs—a few could be left around for beauty spots and botanical research. What do you think of it?

Veritas

Dear Veritas: Get lost.
