

- Morehead -

-Expansion-

(Continued from Page 1)

The development of the Gemini program made the one-place "link trainer" obsolete, and necessitated the development of a new training apparatus for the two-man Gemini flights. Jenzano developed a two-seat trainer from scratch. It is still in use today.

"I would say that 'training' best summarizes what the astronaut's program at Morehead was in the beginning, but 'study' would best characterize what they do when here now," Jenzano said.

"We do not grade or quiz them on their work here, but they often cross-examine each other. They are quite enthusiastic about their work and while here, they often sit in on regular planetarium features, not listening, but sitting there studying they heavens," Jenzano said.

He noted that the regular shows are not affected by the presence of the astronauts. "They work between the shows and after the shows, sometimes until as late as 1 a.m."

The Gemini - Titan 5 team was last here June 23, 24, and 25. "The presence of the next group — the Gemini 7 team, comprised of Frank Borman and James Lovell (who were the backup team behind the Gemini 4) and a backup team of their own, is expected at any time," Jenzano said.

Often the astronauts arrive without much advance warning from NASA officials but, as Jenzano puts it, "because our program here is geared to flexibility we are able to accommodate them satisfactorily."

istry from 50 to 75 students. The School of Medicine will be able to enlarge its first-year medical class by 25 students also to a total of 100 students in the first-year medical class.

The expansion will provide more treatment facilities for patients. It will also afford more space to train physicians, dentists, nurses and other health personnel.

It is expected that the physical plant of the Health Center will double in size in the next five years. This will be followed by a doubling of overall teaching, research and patient care programs.

The student population, now 1,621 in the schools of medicine, public health, dentistry, nursing and pharmacy, is expected to be over 2,700 in 1970.

Among the new programs, contingent upon federal funds,

will be a Child Development Center. The General Assembly has appropriated \$390,000 so far for the center. A request for \$1,600,000 has been made to the National Institutes of Health.

In addition to these, there are plans for a major pharmacology - toxicology research center, now being discussed by UNC and NIH officials.

What They Said About READING DYNAMICS

I now understand how to read, how to evaluate a book, what to look for and how to find what I want to in books. I had not learned any of this even after going through college. I can now preview a book for its importance or skim material for beneficial facts. I now appreciate books and the ability to read them.

Thomas Youngblood, Raleigh, N. C.

I believe that this course is the most useful course I shall ever take. It has showed me that you don't have to read slowly to comprehend.

David Wells Laurinburg, N. C.

I now read at speeds up to 8,000 wpm. In the past fifteen weeks I have read over 300 books. I now pleasure read about ten hours a week and enjoy every minute of it.
