Scott Backs New Medical School

RALEIGH (UPI)—Gov. Bob Scott said Thursday night he was not opposed to establishing a new state supported medical school and it appeared to him East Carolina University was the place to build it.

The Governor said health needs in North Carolina are

growing at a rapid pace and that the state was planning to meet them.

"That is why I am not opposed to the idea of establishing another state-supported medical school to train physicians to meet a crisis we know that is coming—which, in fact, is

almost here."

"East Carolina has expressed a strong willingness to begin a training program," the Governor told the North Carolina Mental Health Association. "The allied health sciences program there is a needed move in this direction."

"To a layman like me, it

appears reasonable that we should build on this beginning," said Scott.

Earlier in his speech, Scott said, "I do not believe we should 'lock ourselves in' by holding to the belief we can have only one medical school. Sure it is expensive to operate such a school. But so is

building roads and paying teachers in the public schools. It costs a lot to provide most services today."

Scott told the Mental Health Association "I want to make it clear that the state must not lessen its support of our medical school at Chapel Hill. We will need all the physicians they can graduate."

"But the experts say there is a limit to the size of an effective medical school," he continued. "We should continue to expand the medical school at Chapel Hill to that maximum size, and this can be done while a new school is in the making."

Scott said "Further, I feel we should look for ways to financially assist North Carolina students attending our two private medical schools, Bowman Gray and Duke, with the stipulation that these students upon graduation will practice for a length of time in North Carolina."

UNC Opens Giant Cancer Unit

The largest and best equipped x-ray therapy center for cancer treatment in the entire southeast will open here in April.

The new facility will be part of the medical school's division of radiation therapy affiliated with the North Carolina Memorial Hospital and will be located in the basement of the ambulatory patient care facility, now nearing completion.

Dedication of the new Division of Radiotherapy has been set for April 10-11 at which time a scientific program on malignant tumors will be conducted. The program will feature a discussion of cancer diagnosis and treatment by five of the nation's leading authorities in cancer.

Director of the Division of Radiotherapy is Dr. G. E. Hanks who joined the UNC faculty in September.

The new facility will be equipped with a 25-million-volt betatron, the first in the state, a super-voltage cobalt machine and conventional x-ray equipment. Total cost of the equipment is \$387,000.

One of the most valuable features of the new unit is a simulator room in which patients are given a "dry run" of their treatment. This is called treatment planning and simulation and involves locating the tumor to be treated and determining the type of treatment to be given. Here the entire treatment procedure is carried out and checked in every detail, but with the x-ray equipment turned off.

"This procedure makes treatment more accurate and safer for the patient because every sophisticated calculation and measurement can be carried out and checked in advance and then merely duplicated in actual treatment," Dr. Hanks said.

"The opening of this department is a major step for the UNC Medical School," Dr. Hanks said. "And it is of special importance to the people of North Carolina because 60 to 70 percent of the medical students here stay in the state to practice. Now medical students, interns and

residents trained here can learn the important place of radiation therapy in treating cancer and use this knowledge in treating the people of North Carolina.

About the treatment of patients, Dr. Hanks said, "In the past, many persons have thought of radiation therapy as a treatment for patients with incurable malignancies. But this is not true. More than 50 percent of all malignancies are

treated for cure with x-ray therapy. And our cure rate is over 40 percent."

The director of the new x-ray treatment center comes to the University of North Carolina from Stanford University where he was an assistant professor of radiology and radiotherapy consultant to the Palo Alto V.A. Hospital. He was also consultant at the same time in radiobiology at the U.S. Naval Radiological Defense Laboratory in San Francisco and in radiobiology at the Hazelton-Nuclear Science Corp. in Palo Alto, Calif.

Dr. Hanks received the M.D. degree from the Washington University School of Medicine in St. Louis, Mo. and went on to Yale University where he took his internship at Grace-New Haven Hospital and West Haven V.A. Hospital. He took his residence training at Stanford University School of Medicine where he became chief resident in 1962.

A native of Ellensburg, Wash., Dr. Hanks is author of nearly a score of articles published in scientific and scholarly journals. He is a diplomat on the American Board of Radiology, a member of the Association of University Radiologists, the American Society of Therapeutic Radiologists and the American Medical Association's Radiation Research Society.

Chancellor Outlines Steps To Solve Food Grievances

(continued from page 1)

The Administration also announced that 29 temporary employees have had their status changed to permanent

and that seven others will be put on permanent next month.

The faculty passed a resolution Friday commending "the Food Service workers, the Black Student Movement, Chancellor Sitterson, Howard

Fuller, Chapel Hill Police Chief Blake, President Friday, hundreds of students and numerous townspeople of Chapel Hill for their diligent

and successful efforts today to avert violence and disruption beyond that already imposed upon the University Thursday by action taken by others outside the University community."

Sitterson, in his speech to the students, said that "the black students have set an example that many of us may well emulate."

"That they have shown such dignity and self-restraint under difficult circumstances ... does credit to them," he added.

Mrs. Brooks told the crowd that "we've had so many promises in the past. We can't go back to work on promises." She called Prillaman "the start of the whole thing."

She also said that the workers were unable to get any response from the administration on their grievances until after March 4, when students stalled the cafeteria lines and turned over tables.

The students who are arranging the vigil for Monday are trying to get state legislators to attend it and speak.

It is being conducted, according to Goldstein, in an attempt to "show the rest of the state that students think the issue is important and that they support the workers."

SNOW ART—never gets perfected in Chapel Hill because of a lack of one vital ingredient—snow. These students did the best they could with our only snow of the year.

Fate Of Cdr Bucher Pondered

CORONADO, Calif. (UPI)—USS Pueblo skipper Lloyd M. Bucher returned to running his fictional ship Friday while five admirals pondered whether he should ever again hold another Navy command.

The five-admiral court of inquiry concluded Thursday

after hearing from 104 witnesses and accumulating almost 3,400 pages of testimony.

Although the Pueblo is in North Korean hands, it is, in Navy legal fiction, still a ship and Bucher is here commanding officer. The Pueblo crew is housed at the

North Island Naval Air Station near here, and Cmdr. Bucher runs the "ship" from a nearby office.

However, a spokesman for the Navy's personnel bureau said Friday Bucher would soon be reassigned to shore duty, but did not say what that duty would be.

A farewell party is scheduled for the Pueblo crew Monday night, indicating that they too may soon have new orders.
