

We need you.

WERE FIGHTING FOR YOUR LIFE

American Heart
Association

Up front:

Have more energy. Use needles! No, it's not what you're thinking. From the Far East to the New South comes the ancient art of (yikes!) acupuncture. DTH staff writer Hannah Drum ventures into the realm of pulse points and energy pathways as practiced by modern acupuncturists here in Chapel Hill.

Joe Bob for President! Presidential candidate Briggs promises a balanced budget, cable TV for the poor and Action Jackson as the next Secretary of Defense. Joe Bob's campaign trail leads straight to the Drive-In where he checks out (what else?) "Action Jackson," the movie voted most likely to have at least four sequels.

3Soapy students. Just in case you avid "General College" fans missed the action this week, here's the handy weekly update on the trials and tribulations of those funky co-eds.

3Are we there yet? Remember trips with mom and dad, passing the time with license plate games and "Found a Peanut"? Remember your dad telling you to shut up and let him drive? This week's Graffiti explores the gentle art of in-car entertainment — just in time for the long drive to the beach.

6"Hardships and nothingness." Author Elizabeth Spencer tackles such themes in her novels of Southern victory over destruction. After 30 years abroad, she still feels her Southern roots. Staff writer Karen Zimmer talks to this creative writing teacher.

Get out of town! But if you can't, there's still plenty to do around here. No beaches or skiing or cruises or parties or fun, but who needs it? You'd rather just take in a movie anyway. Right. Week's Fare is your guide to Spring Break in our own Ft. LauderHill.

Cathy McHugh, editor; Sally Pearsall, copy editor; Jenny Livingston, assistant editor; Laura Ross, design editor; Matthew Plyler, staff photographer.

Staff: Francine Allen, Karen Entriken, Amy Gallimore, Karen Hatton, Allison Pike, Lauren Sieg, Richard Smith, Rhys Williams and Karen Zimmer.

On the cover: As part of an acupuncture treatment, Diana Hawes places moxa on a patient and ignites it; the substance is removed befores it burns the patient. Moxa has special properties that build the blood and it's especially useful in treating anemia and in warming the body. (Photo by Matthew Plyler.)
