# FOR FARM AND GARDEN.

#### Hot Water for Plants.

It is a fortunate circumstance, says Vick's Magazine, that a plant will endure a scalding heat that is fatal to most of its minute enemies. Water the system adopted, -- [New England ] heated to the boiling point, poured copiously over the stim of an enfeebled peach tree, and allowed to stand about its collar, will often have the happiest restorative effects. Trees showing every symptom of the yellows have often been rendered luxuriantly green and thrifty again by this simple means. The heat is presumably too much for the fungus which had infested authority, the vital layers of the tree ima mediately under the outer bark.

The London florists recommend hot lina farmer. water up to 145 degrees F. as a remedy when plants are sickly, owing to the proportion to their weight than those soil souring, the acid, absorbed by the that are full grown. roots, acting as a poison. The usual resort is to the troublesome job of repotting. When this is not necessary for any other reason, it is much simpler to your hot water freely through the stirred vol; it will presently come through tinged with brown. After this thorough washing, if the plants are kept warm, new root points and new growth will soon follow.

Rearing Young Ducks and Turkeys.

The difficulties mat with in rearing young ducks and turkeys are chiefly due to the same excessive feeding. Soft food is recommended by nearly all the more benefit to the pigs on cold days writers upon poultry rearing. It is than any quantity of corn," It would quite safe to approximate natural conditions in respect to feeding as closely them raw. as possible. The natural food of the wild turkeys and ducks are hard-shelled insects, seeds, a vegetable matter; and these birds rear full broods upon this bered by physicians and observing peodict. A food commonly recommended ple among prolific causes of sickness in for turkey chicks is chopped egg, curd | rural districts. of milk, and bread crumbs, with red pepper. Perhaps the pepper is useful to help digest the egg and curd, but it is not otherwise requirel. For three seasons past the writer has reared full broods of young turkey's on corn and buckwheat coarsely ground and fed dry. To rear the whole of a brood of 12 on this food without any difficulty or ailment at the supposed critical times

necessarily given at once, but is better | What's the Matter With Your Blood ? given in small feedings continuously till enough is given. A big manger as goes through the heart full of hay may be breathed upon and picked over till the last of it becomes distasteful. Do not overfeed whatever Farmer.

Farm and Garden Notes. A good kitchen garden should be found on every farm.

It is rust more than wear which ruins agricultural implements.

"Water all animals before feeding meal, and not after," recommends one

Corn is the only crop that can all be fed back on the farm, says a South Caro-

Growing animals need more food in

An experienced poultry man says he seldom boils corn for poultry, but prufers to give it raw as the evening meal, You will save your horse the pain of a fore mouth if you will always dip the bit in a bucket of cold water before putting it in his mouth. This "takes the frost out" of the bit.

In much of the ensilage fed to cattle there is enough development of alcohol to stimulate circulation, and, possibly, to beget appetite for that kind of food, Some one says: "A good mess of cooked turnips, fed warm, will be of be still better to warm them and feed

A practical farmer in Connecticut says: "I have learned that, by the proper use of commercial fertilizers I can obtain, at a fair profit, finer potatoes, free from disease and blemish, than by any other means known to me."

Irregularity in the amount of food given the cow will cause her sometimes to dry up. So will worrying, fast drivor excitement of any kind. An ani mal giving milk is very sensitive to bad treatment or surrounding influences. If the land requires drainage it means an outlay of \$25 to \$50 per acre before the farm can be made really tillable and productive. To test this matter the soil should be duy into with a spade three feet deep, and if water rises in the hole at any time of the year the land needs thorough draining. Many swine breeders regard a solid earth floor the best thing for a pig pen. It must be high enough to be readily drained, so as to be dry at all times. It is also customary with some breeders to remove from six to eight inches of these earth floors every spring, draining the manure-soaked earth on the fields, and renewing the floors with fresh

Cleveland Press As much blood goes through the kidneys

There is nothing startling about this fact except it he a revelation. Many people have but a domination of the real work of the kidneys. They not only drain the water from the system, but also the pononious matter which that water holds in solution to carry out of the system. Over half the time, however, the kidneys fail to do this work? What is the result? Gradual fail its of strength and health and

suggests the suitability of it to the ne cessities of the young turkeys, and the dryness of the food is doubtless one excellent feature of it. Ducks do not require soft food, and crushed oats fed in a shallow dith with water in it meets their natural requirements and habits exactly, and is a safe and excellent food. When any young bird appears stupid, sits down and sways its head sidewise. with half-closed eyes, it is suffering from overfeeding, and this is the way in which nearly all of the lost ones die. -[New York Times.

How Many Meals for the Cow

It muy seem a small matter to discuss, whether a dairy herd should be fed twice or three times a day, yet if twice is enough, as many believe, it is not so very small a matter. We have no doubt that instances could be cited on either sile, which, taken alone, would seem to settle the question. If a cow is under-fed in two meals, or if her two meals are devoid of proper nourishment, even if full in quantity, the addition of a third feeding might increase her flow of milk or add to her weight of flesh. There is no doubt, whatever, that cows may be fed well, so they will do about all they are capable of doing by either two or three meals per day. We have practiced both systems and can hardly say that there is very much | will possess a high flavor when it is difference as far as the cow is concerned. fresh, or one that will suit either the convinience to have our stock accus- in the milk and cream before churning. tonied to the two-meal system. stealing elevated railroad tickets from the Hamilton Bank Note Company, after they had been ordered to destroy them, was a surprise to the customers of bank note companies everywhere, as well as to the officials. It was the first time in years that a theft by employees of a bank note company had been made public, and if the officials of these contime that any such theft had occurred. The President of a bank note company in this city recently said to the writer that it was absolutely impossible for any of his subordinates to steal anything without being detected at once. Every imaginable safeguard is used to prevent the company's suffering through he dishonesty of its employees. In printing bank notes or stamps, or bonds, or tickets, the paper to be used is carefully measured before-hand by one of the higher officials. Only enough to make the number ordered is given to the workmen, and they are held responsible for it thereafter. If a single stamp or ticket is lost the doors are locked and nobody is allowed to leave the workshop until it is found or satisfactorily accounted for.

With banknotes and bonds extra precautions are taken, and they are counted after going through each process. If a mistake occurs all have to be done over, and the first batch is destroyed. If one is lost and cannot be recovered all are destroyed, and a new series printed in entirely different colors.

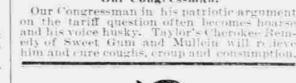

An instance of this kind occurred several years ago. A bank note company in this city printed some bonds on contract for the Virginia Government, One package was stolen while they were being transported to the treasurer. Of course, none of them had been signed, and they were, therefore, not valid; but all the rest were at once destroyed, and dered.

Each official in a bank note company serves as a check upon the other until the President is reached. He is practically unchecked. All men are liable to be other than they seem, and even the highest have been known to fall, but so far no instance is on record in this councompany became a defaulter.

A cow that finishes her the white, breakfast at eight o'clock has no very

"Ooh!" grunted the savage magissharp appetite for dinner in four hours, | trate, "no more cases to try."-[Guiand in many cases the noon meal is nett (Ga.) Herald.

more of a disturber of remastication and digestion than a benefit to the animal. We were surprised to see how quickly cows would adapt themselves to the chew the cud at noon when persons were about the premises. They but soon learned not to care for it. that the morning or night meal is not gram.

A Vat That Holds 420,000 Eggs. "But talk about pickling eggs, Germany takes the lead. There are some two-meal system, and would lie and vats in this country that hold 25,000 eggs, but one German pickler has a vat that holds 500 barrels, or 420,000 eggs. hot only learned not to expect feeding, He pickles yearly from 75,000 to 100,-000 barrels of eggs, or from 63,000,000, It must be remembered, however, to 84,000,000 eggs."-[New York Tele-
