SCOTLAND NECK, N. C., THURSDAY, AUGUST 16, 1894.

NO. 37.

In view of the importance of this question of sanitation to each man. woman and child, and to the material It acts directly on the welfare of the State, I had determined. on the first occasion, to investigate the tem. This is the medicine you question and give out any suggestions want. Sold by all Druggists in that I might find of possible aid in affairs which at present exists.

> I have been looking somewhat int the problem during my stay in the city. F. Kennedy, chief inspector of the board

If an army should invade North Car-Where the sea-gulls fly and white olina or a strike occur among the railor five thousand people, the fact would arouse everybody in the State, and the Where the iron gray moss on live oaks newspapers would be full of the latest developments. Every business man, While the red-birds sing and wildly every professional man and every farmer would be ready to give up his work and go to the front. But strange to say, very little interest is awakened by the killing of as many people by a preventable disease—an enemy that wears no And the great white moon of endless uniform, beats no drum and heralds its approach by no trumpet: an enemy that works secretly and insidiously that refuses to fight in open field, but creeps into the homes of the people and strikes down men, women and

This enemy can be kept out. To rout it is only a question of cleanliness. Dr. Maccormac says, "we live or die. live our full term or perish prematurely. according as we shall wisely or other-street building.

It is pretty well known that typhoid The potson in either air or water is the lowed on any one's premises, it is liable to contaminate both the water and the fever "is essentially a preventable disease and where it has not been preventcolored man of Union county, was in ed the fault has consisted in the known means not having been used."

SUGGESTIONS FOR CITIES. Well water in cities is universally condemned. Where a city gets its water entangled in the veins and prevented supply from a river the shed should be well guarded for eight or ten miles above the take. Where the take is from a pond filled by springs, the shed should be still more carefully protected. Flowing water will purify itself, but The blood had flowed toward his head when organic impurities wash into the and after he was taken down he be- pond the danger is great. All drinking came very sick. Since that time he water should be frequently analyzed. has recovered from his sickness, but all Next to pure water come drainage and of the wool on his head has pulled out. sanitary regulations. What breathe or the food we eat. Those then must they do? In the first place, who cannot procure the juniper water result of filth. If putrid matter is al- they must be twice as careful as cities that nature medicates let them procure about slops and all effete matter. Such matter should not be allowed at any air. Dr. McVail says that typhoid time to be exposed to the air, nor should it be buried about the premises. It should be kept in proper receptacles for hauling away, and it should be the business of the authorities to provide for its removal. It should be composted at a suitable distance from the city and sold for fertilizing, or a privilege should be granted some person to do the same. As long as the surface of the land in towns is allowed to be covered with all sorts of organic matter, and so long as the people persist in burying it with the idea of removing the evil, so long will the water and air become polluted and the people remain afflicted with fevers, diphtheria_and correlative diseases.

SUGGESTIONS FOR THE COUNTRY. be left to the individual initiative. ple should be the healthiest and freest That is a matter of public concern. If from sickness, but it is not so in respect the effect of neglected premises were to to the diseases named in this article. afflict with disease those who are directly. Statistics show that such diseases are responsible for the neglect, it might be more prevalent in the rural districts well to leave the matter of cleanliness than in the towns and more prevalent to individuals. But unhappily the in the towns than in the cities. The same degree of cleanliness in the counfore the time of the Sage of Montieello. lowed to remain in the city limits or to try requires a good deal more labor and but he first haid down the mathematical be buried within the city limits.
