

Long Hair

About a year ago my hair was coming out very fast, so I bought a bottle of Ayer's Hair Vigor. It stopped the falling and made my hair grow very rapidly, until now it is 12 inches in length. —Mrs. A. Boynton, Atchison, Kans.

There's another hunger than that of the stomach. Hair hunger, for instance. Hungry hair needs food, needs hair vigor—Ayer's. This is why we say that Ayer's Hair Vigor always restores color, and makes the hair grow long and heavy. Use a bottle. All druggists.

If your druggist does not supply you, we will send you one dollar and we will express the bottle. He will send you the name of your nearest express office. Address, J. C. AYER CO., Lowell, Mass.

Best For The South.

Wood's Turnip Seeds.

Wood's Seeds are grown and selected with special reference to their adaptability to the Southern soil and climate and give the best results and satisfaction everywhere.

If your merchant does not sell Wood's Seeds write for Special Price-list.

Wood's Fall Catalogue issued in August, tells all about Crimson Clover, Rust Proof and Winter Oats, Send Wheat, Grasses, and Clover seeds. Vegetable Seeds for Fall Planting. Hyacinths, Tulips, etc. Catalogue mailed free. Write for it.

E. E. HILLIARD, Editor and Proprietor. "EXCELSIOR" IS OUR MOTTO. SUBSCRIPTION PRICE \$1.00. VOL. XVII, New Series--Vol. 57. SCOTLAND NECK, N. C., THURSDAY, JULY 18, 1901. NO. 29.

THE EDITOR'S LEISURE HOURS.

Points and Paragraphs of Things Present, Past and Future.

In the Press Convention at Greensboro last week something was said by one speaker about the wisdom of the press being more independent and self-assertive. To one reading about it at long range it is hard to say just what was meant. But whatever was meant, there are few institutions in the land more dependent upon the whims of the public than the press. This is true as it applies to the local country weekly, at least. How to please all and do right at the same time is a hard question.

W. H. Steele, a Confederate veteran of Randolph county, upon receiving a pension warrant for \$14, returned it to the State Auditor saying that he would not accept it, as there were others who needed it worse than he did. Some one has suggested that a medal be presented to Mr. Steele for his generosity to those who are more destitute than himself. One remarked the other day that doubtless Mr. Steele was the first pensioner to do such a thing, and another promptly replied that he will probably be the last.

Say, what you may, it was an act of usefulness worthy a great hero, and it must have been prompted by the spirit of true love for his suffering fellows.

Railroads may not expect always to hold down everything by their exorbitant freight rates. The following from the Philadelphia Record is quite suggestive of the possibilities of other methods of transporting oil:

"They have oil in Texas—no end of it—Texas is a State as big as four or five Pennsylvanias; the oil in one corner of it, and the people who would like to burn cheap oil instead of dear coal are prevented by exorbitant freight rates and the lack of suitable cars for transportation. Pipe lines furnish the solution of oil delivery by the most economical means of carriage, and sooner or later the railway companies will find it necessary to adapt their equipment to the liquid exigencies of the situation. If the supply of cheap oil shall prove constant it will be found profitable to carry the product to consumers wherever there may be a considerable demand for it. Oil may even be piped to the Gulf shore and brought in tank steamers to all Atlantic ports at such moderate cost as to cut a competitive check upon the price of coal."

Among the reasons given why young men could well afford to stay on the farm rather than yield to the dazzle and attraction of city life, we find the following pointed paragraphs in the State Sentinel of Indianapolis:

"No element is gaining more from the matchless progress we are making than the man who tills the soil if he will but cling to the earth. "And why not? There is no life more independent than that of the farmer. He need pay obedience to naught but God and nature. He is the commissary of mankind—the one man upon whose labor the prosperity of the world depends. He has room in which to breathe and live and think. During the summer months he goes out into the field and wrestles with nature in the sunshine, until he half persuades and half compels the harvest. The pure, untainted air of field and forest adds a glow to his cheek, a sparkle to his eye, and elasticity to his step. To merely live is joy, and when, after the sowing and reaping, the harvest is safe within the granary, who will say but that the minister of the soil, the hero of the harvest, is not the most favored of human kind? Nor is farm work as severe as in primeval days. The genius of invention is rapidly reducing the labor to a minimum. The most severe labor of today would have been mere play to the last generation."

A RAGING, ROARING FOOD.

HOUSEHOLD TALKS.

Items of Information That May Be of Value to Home Keepers.

Canned rhubarb for pies is a convenience which many housekeepers regard as a necessity to their preserve closets. To can it, wash it thoroughly and cut into pieces somewhat less than an inch long. Pack it into jars, fill with cold water, cover and put in a cool, dark place, says the New York Tribune.

To avoid infection from typhoid fever germs in drinking water during summer journeys or in country hotels or boarding houses, Mrs. Ellen H. Richards, of the domestic science department of the Boston Institute of Technology, advises her pupils to carry with them small vials of crystals of permanganate of potash. This, she says, should be added in small quantities to the glass of drinking water in hotels, on railroads, at the spring, well, etc. The water, after the germs have done its work, will be of a pinkish color.

The best way to prepare pineapple for the table is to shred it with a silver fork. First peel the fruit and remove the eyes. Then begin at the top and pick it apart. Cover it with powdered sugar and stand it on the ice for two or three hours before serving.

The Armenian restaurants serve a between courses preparation that is particularly refreshing in hot weather and which might with advantage be added to American bills of fare. Prunes, figs and dates, of the finest brands, are rinsed thoroughly and are then soaked in a quantity of cold water until they regain their original plumpness. The water is then turned off and saved, and boiling water, enough to cover the fruit, is poured over it. This is allowed to stand on the fruit until it is cold, when the water in which it is soaked and the juice of a lemon, and sometimes that of an orange, is added, and the mixture is sweetened. It is then poured over cracked ice and served. The fruit juice is especially delicious, but the fruit will also be liked.

Grapefruit marmalade is an excellent dessert for the nursery table. Remove the skin and white pith, cut the former into shreds and boil it until it is tender. Meanwhile put into the kettle sugar equal in quantity to the weight of the fruit, and add to it all the juice that can be drained from the fruit. Let this come to a boil and simmer for 15 minutes. Put in the pulp and rind and boil again for 15 minutes. Put away in jelly tumblers.

PERSONAL AND LITERARY.

James Mortimer, the translator into English of Capt. Dreyfus' book, is a dramatist and an authority on chess. He is the author of the "Chess Player's Pocket-Book and Manual of Openings."

The honorary degree of doctor of laws has been tendered by the University of Dublin to Hannis Taylor, of Mobile, formerly United States minister to Spain, and author of the "Origin and Growth of the English Constitution" and of "International Public Law."

A monument to the late Rev. Eljah Kellogg, the preacher and writer of books for boys, is projected in Maine, and three towns are laying claim to its location—Portland, the city of his birth; Brunswick, where he was educated, and Harpswell, the little seacoast town where he preached so many years and where he died.

The "William Black Memorial Light," the beacon erected on Duart Point, Isle of Mull, by contributions from the admirals and friends of the late novelist, is now flashing over the waters he so often and so beautifully described. It is a handsome castellated structure, 45 feet above high water, and visible 12 miles away in clear weather. The cost was £200.

"It is given to few men to be honored by so many literary memorials as Dr. Arnold (the famous master of Rugby) has been," says Anna B. McGill, in the Book-Buyer. Coleridge, Arthur Clough, Matthew Arnold, Dean Stanley, Thomas Hughes—all these have recorded his wonderful personal influence, his beautiful loyalty to his friends, his fidelity to great principles.

Mrs. Robert Louis Stevenson, says the Critic, has taken up her permanent residence in San Francisco. She has built a house overlooking the bay, and filled it with memorials of her husband. Adjoining her, and forming part of her house, is that of her son by her first marriage, Lloyd Osbourne, and his family. San Francisco was Mrs. Stevenson's home before she was married, and there she met her husband.

Once in awhile the severity of a critic does an author a service. Andrew Lang once performed an office of that kind for Barry Pain. Mr. Pain's first book, "In a Canadian Canoe," was a youthful and immature production, and was severely treated by the critics. It is said "every editor in London felt the punishment too severe for the crime," and to express a practical sympathy, orders began to pour in on Mr. Pain, who presently had more than he could do.

ANTIQUE RUGS ARE RARE.

Not More Than Two Hundred in This Country Are the Genuine Goods.

One of the most experienced men in the rug business recently made the assertion that there are not more than 200 genuine antique rugs in the country. Those who own them hold on to them, for their value increases every day. To be antique a rug must be at least 100 years old, says the New York World.

Because it looks dingy and is high priced is by no means a guarantee that the rug is a genuine antique, and many who have prided themselves on the ownership of such an article would be sadly disappointed if they had it examined by an expert and were informed that it was the ordinary kind made in this country and had been "doctored" to make it appear old.

The finest rugs come from Persia and are named after the provinces in which they are made. The manner in which the knots are tied is a guide to the province. They look so much alike it is difficult to tell the difference. The manner of making them, too, dates back centuries and the colors endure forever. The people of India neither invent nor imitate, for the old methods are the best and they stick to them as long as they live.

The colors of these rugs never fade. While the dust may soften their original tints, the primal quality is never lost. They can be cleaned time and again without injury to color or texture.

The people of India are excellent at copying and will reproduce an original rug so perfectly that it is hard to tell the difference. They always get the best effects.

Antique rugs are very expensive. They cost hundreds and thousands of dollars and \$8,000 or \$10,000 is not considered exorbitant for a good-sized rug.

Nearly all of the old patterns are being repeated and are being used, with the exception of those in the mosques, copies of which are not permitted.

The Armenians have demoralized the rug trade by bringing over a great number of counterfeit rugs in recent years. They use mineral dyes and the weaving is not as skillful.

Rained His Opportunity.

"Yes, there is no doubt he stole the horse. But just as we wuz goin' to string him up he said somethin' about playin' th' concertina for th' last time. Well, th' boys all liked music an' there wuz a concertina in Ike Hunken's cabin that had belonged to a tenderfoot that passed in his checks a dozen year ago. The boys fetched it out an' Bill Stump told th' feller that if he'd play 'Rock o' Ages' clean through we'd let him go. So we all stuv in the lemon juice, but he started in."

ART IN ARCHITECTURE

Designed and Written Especially for This Paper

The nine-room residence here illustrated and described will cost \$1,900 with a foundation of stone.

The size of the parlor is 12 feet 6 inches by 12 feet 6 inches; sitting-room, 12 feet 6 inches by 12 feet 6 inches; dining-room, 12 feet 6 inches by 16 feet, and has a bay window; kitchen, 11 by 12 feet; chambers, 8 feet by 8 feet 6 inches; 10 by 10 feet, 9 feet by 12 feet 6 inches; 12 feet by 12 feet 6 inches; 10 by 13 feet, and alcove, 7 feet 6 inches by 9 feet 6 inches; pantry, 4 feet 6 inches by 6 feet 6 inches; bath-room, 6 feet 6 inches by 10 feet. The three large rooms on the first floor are separated by sliding doors.

A rear stairway leads to the basement and second floor. The first and second stories are 9 feet 6 inches high. All floors are double, having building paper between finished floors and sub-floors. The sheathing is of fence flooring, having tar paper between it and siding. All siding is 4-inch face; studding, 2 by 4 inches; joist 2 by 10 inches; shingles, cedar; ornamental carving; art glass; press brick chimney; American glass; Geor-

country. The lines on which the residence is planned give a large number of rooms, and all of a fair size, as shown by floor plans.

The veranda ceiling is celled with narrow beaded ceiling of Georgia pine, finished with hard oil marine varnish.

Veranda and porch floors are painted four coats good lead and boiled linseed oil. The chimney is capped with stone. Chimney brace is of wrought iron. The outside cellarway leads to the basement. The height of first story floor is 4 feet 6 inches above grade. Stone work above

FRONT ELEVATION.

gla pine finish; exterior painting, three coats; galvanized iron gutters and down spouts; front door, glass panel. The doors are 2 feet 8 inches wide by 7 feet high, 1 1/4 inches thick; the front door is 3 feet 4 inches wide, by 8 feet high, 1 1/4 inches thick. Shingles are to have one coat of paint. The attic has a single floor. All exterior walls have one coat of brown mortar for back plastering, and all rooms are finished with two coats of plaster. The hardware is of a substantial kind, and properly placed.

The rubble stone wall is 15 inches thick and the basement floor is cemented. The house is piped for gas and furnace. There is a Georgia pine floor in the hall, parlor, sitting and dining-rooms, maple floors in bath-room, kitchen and pantry. The sink in the kitchen is porcelain lined. There is a wainscoting in the kitchen, bath-room, dining-room and halls, made with cement plaster and capped with wood molding. Laundry, coal bins, fruit-room and other storerooms are in the basement. All roughing in pipes laid to bath-room.

Catchbasin and cesspool are built in the yard. Girders are 8 by 10 inches, and posts supporting girders 8 by 8 inches. Closets are provided with shelves and hooks. The front stairs, treads, newels and risers are of Georgia pine.

The Oldest Known Timber.

Probably the oldest timber in the world, which has been subjected to the use of man, is that found in the ancient temple of Egypt, in connection with stone work, which is known to be at least 4,000 years old. This, the only wood used in the construction of the temple, is in the form of ties, holding the end of one stone to another. When two blocks were laid in place an excavation an inch deep was made in each block, in which a tie shaped like an hour glass was driven. It is, therefore, very difficult to force any stone from its position. The ties appear to have been of the tamarisk or Shittim wood, of which the ark was constructed.

The Ideal Motor Vehicle.

Everybody recognizes that the desideratum in a motor vehicle is that it shall combine simplicity and durability with cheapness. Public favor is not won by complicated, heavy and cumbersome machinery that is liable at any moment to get out of order. On the contrary it is a demand of Americans that an acceptable automobile shall be reasonably light and durable. They want a machine that will last, and one that will be cheap enough to allow of its purchase by the class of people who to-day content themselves with a horse and buggy.

Average Weight of Oysters.

There are 14,000 oysters in a ton of the bivalves, but in a good season when they are in order it does not take much time to get away with that measure of the prince of marine food, as some are disposed to regard oysters.

Room in Railroad Building.

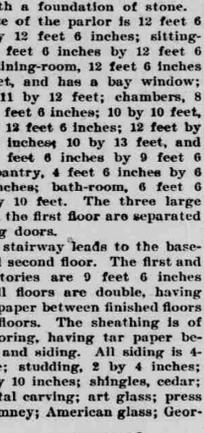

Over 8,000 miles of new steam railway will be constructed in the United States this year. Oklahoma and Indian territory are in the list for 612 miles.

Pope Has a Silver Chair.

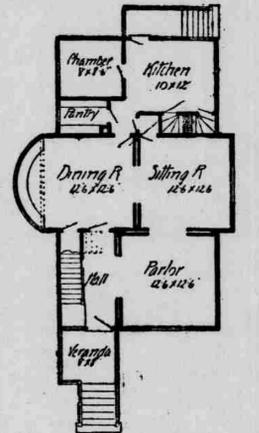

The most costly chair in existence belongs to the pope. It is of silver, is worth \$9,000, and was a present from a wealthy admirer.

PLAN OF FIRST FLOOR.

FRONT ELEVATION.

PLAN OF SECOND FLOOR.

grade is random range block limestone. Sliding door partitions are lined with one-half inch ceiling. All material throughout must be of the very best. The owner will furnish bath-room fixtures, art glass and shelf hardware.
