[Youth's Companion.] Gen. Robert E. Lee used to relate When John came courting, and his a pleasing incident of one of his boys with whom he was walking out in

the snow one day to Arrington. The little fellow lagged behind and looking over his shoulder, the father saw him imitating his every movement with head and shoulders erect and stepping exactly in his own footprints. In "Life and Letters of Lee" the author says that the general would conclude the story by say ing: "When I saw this I said to myself, It behooves me to walk very straight, when this little fellow is already following in my tracks." Accordingly, there was never a more circumspect father than was this great man.

While stationed at Fort Hamilton he wrote several letters to his young sons, They may well be called the letters of a model father. Here

"Fort Hamilton, N. Y., March 31. 1846. I cannot go to bed, my dear son, without writing you a few lines to thank you for your letter, which gave me much pleasure,

"I do not think that I ever told you of a fine boy I heard of in my travels this winter. He lived in the mountains of New Hambshire. He was just thirteen years old, the age of Custis. His father was a farmer, and he used to assist him to work on the farm as much as he could.

"The snow there this winter was deeper than it has been for years, and one day he accompanied his father to the woods to get some wood. They went with their wood sled and after cutting a load and loading the sled, this little bey, whose name was Harry, drove it home while his father cut another load.

"He had a fine team of horses and returned very quickly; but he found his father lying prostrate on the frozen snow under the large limb of a tree, which had caught him in its fall and thrown him to the ground. He was cold and stiff, and little Harry, finding that he was net strong enough to relieve him from his position, seized the ax and cut of the limb, and then rolled it off him. He then tried to raise him but | dog?" has father was dead and his feeble efforts were all in vain. Although he was out in the far woods by himself, and had never before seen a dead person, he was nothing daunted, but backed his sled close up to his father and with great labor got his body on it, placed his head in his lap, and drove home to his mother."

In every letter, General Lee wrote "learn to be good. Be true, kind and generous," and always told his is coming, the pig is brought into hoys some instance of courage of the hut and its legs tied together. A duty well done, or some interesting lighted brand is applied to scorch it fact of his daily life.

WELDING TORTOISE SHELL

Hot Water and High Pressure Does the Business.

One of Uncle Sam's naturalists at Washington asserts that tortoise shell, which is made from the horny skin overlying the bony case of most species of turtles, possesses the property of welding so perfectly that no trace of junction is visible.

Two plates to be united have their adjacent edges beveled in opposite directions, and are then squeezed together in a metal press under the ac-

tion of boiling water. Imitation tortoise shell is made by painting horn with paste of lime litharage and soda, which is rubbed The domestic application of elec- off after drying. This process leaves dark spots of lead sulphide in the horn, resembling the mottling of real tortoise shell.

AUTOMOBILES IN INDIA.

Fine Roads Encourage Followers of

It is probably not generally known that India is remarkable for its possersion of many most excellent roads some of them of great length, like that which runs from Bombay to Delhi, a distance of 900 miles. It is described as a "perfect highway." Another fine road, 1,500 miles in length, extends from Calcutta to Peshawur, at the frontier of Afghanistan. These roads are kept in perfect repair, and were built originally for military purposes before the advent of rallroads. Many of the native princes give particular care to their roads. Of course, the nature of the country plays a part in the existence of the roads, and now they serve as a stimulus to the use of automobiles, which are very popular in India.

Properties of Tantalum.

Tantalum, when cold. resists chemical reagents; it is not attacked by boiling hydrochloric acid, aqua regia, nitric acid or sulphuric acid. It is also indifferent to alkaline soluhydrofluoric acid. Thin wires of tantalum burn with low intensity, and without any noticeable flame, when ignited in air. Tantalum combines with carbon very easily, forming several carbides, which, as far as at present known, are all of metallic ap; earance, and are very hard and brittle, but does not seem to amalgamate with mercury. It can, however, be alloyed with most metals.

plantation of 1,000 acres may yield orable conditions.

November is London's worst month for fogs. During a "good" year the Londoner may have to breathe only fifty fogs. In a very "bad" year he may have to endure as many as 80. London's countless coal fires, mingling soot with mist, concoct the Londoner's fog for him. nounced excellent in quality, with | The great majority of fogs in the only 1 or 2 per cent. of alloy.
