## THE WILMINGTON DAILY POST.

WILMINGTON, N. C., AUGUST 15, 1867.

## LOCAL

To our Country Friends .- We will feel under many obligations to such of our country friends as will be kind enough to give us accounts of the prospects of the crops in their vicinity. The interest of the surrounding country is the interest of this paper, and we wish to give through the Post such information on all points as may be of interest to every class of readers.

#### Wilmilmington Manufactories. Mr. WM. N. REID is extensively engaged in the

collection and preparation of canes for the manfacturing of paper.

miles of land covered with the reed or cane, which has never yet been utilized. It has, however, long been known that the reed or cane could be converted into paper by the ordinary chemical processes of reducing vegetable fibrous substances to paper-pulp, but it has only recenty been discovered that these chemical processes can be saved by what it called the "steam-blowng process."

world at large. Paper pulp will be so cheapthe material for a variety of new manufac-

Paper is now very extensively used in the United States for paper boxes, for roofing buildings, for binding books, and for filling in frame houses board paper being substituted for bricks). Paper and paper pulp, in various forms, is now apolied in Europe to the manufacture of a hundred different articles, such as water-pipes, tanks, trunks, coffins, boats, pails, tubs, picture frames. portable houses, &c., &c.

Whenever this article-paper-pulp--is made cheap, it will be used instead of wood for the

solution of lime—is then beaten into pulp in a his family and his friends. rag engine, and run off into thin sheets round a The Rev. M. B. GRIER next occupied the stage. board" or "straw board." This sells usually at about \$100 per ton in New York city, but it now as low as \$80, which is about the cost of the article to the manufacturers.

the steam blowing process for less than \$30

The great difference between the cost of the

First-The cane costs nothing but the expense of cutting and transportation. The cutting is our State. simple and inexpensive, and the cost of transporution is light, because, as the cane grows on the banks of navigable streams, it can be easily transported to the place where it is to be made.

Second-No chemical process is required preliminary to the rag-engine. The blown cane is at once beaten up into pulp and washed in that engine, and then run off into paper on the "wet-

That of itself is a saving of one cent per pound, to say nothing of saving the capital required for the apparatus used in the boiling process. It follows inevitably that the box-board for the whole country will be made by this process near the cane-brakes, and transported thence to New

York and other great marts. s very simple and cheap, being merely beatingengines and that part of a paper machine called a wet-roll, costing about six hundred dollars. One man attends one of those machines, which will

run off three or four tons a day. The material taken from the wet-roll and dried sheets and pressed can be sent to paper-makers to be made by them into different kinds of paper. For wrapping paper, wall paper, binder's board and roofing paper, no treatment after the steam blowing is required; the blown cane is beaten into pulp in the usual way, and run off into paper. The same material (the sheets pressed into bales,) if put into the tubs or boilers and boiled

la caustic alkali, will make superior envelope, book or printing paper. Several hundreds of tons of white, tinted and brown or wrapping paper have been made by this process. The paper-maker will find that he can get from boiler full of the cane paper board, six times as much pulp as can be got from a boiler full of straw or esparto, with the use of less alkali and a shorter boiling than is required for those mate-

fals, and at the same time get a better articlesoft, like rag paper. This peculiar quality is owing to the fact that the acid, silex and other extraneous matters are washed out in the beating engine, and the alkali applied to the clean fibres produces a much better effect than it would have upon the crude straw or esparto. The supply of this article to paper makers will

cause a reduction in the price of printing paper of over 30 per cent.

The cane is especially adapted for the ste blowing process-the steam easily penetrates it, and the silex, which presents a strong resistance to the action of chemicals, is got rid of by being blown off on the discharge from the gun.

This process is as follows: tightly compressed bundles of the cane are put in the steam cylinders or guns, which are twenty-four feet long and fifteen inches in diameter, and there subjected to the action of steam at a pressure of about one hundred and seventy pounds to the inch for about ten minutes. The gums and glutinous matters which hold the fibres together are thereby dissolved and softened by the steam, and whilst in that state the cane is blown into the air, the fiores are separated by the explosion of the steam among them, and the silex is blown off. In that condition of the material, it is of course easy to wash out a great part of the gums and coloring

The blown cane fibre consists of long strings, mewhat resembling tow. Six of these guns will blow fifty tons per day at a cost for labor and fuel of about eighty dollars. Each gun blows

harge. fore it could be reduced to pulp that would "felt" sufficiently to run off into paper. The discovery that this is unnecessary is pregnant with vast back, well executed, and calculated to deceive.

For a hundred purposes the one thing necessary is cheap paper pulp. With that desideratum supplied, we shall have a new era in many of the useful arts. It will be substituted for lead for water-pipes and other pipes, and for iron in many cases. It is found to be better than iron for armor for ships. Being plastic it will be moulded into various forms for ornamental shop fronts, mantel-pieces, &c.

In France it is now used for statuary. Mixed with other materials it makes a fire and waterproof cement (for which a patent has been obtained.) With this it will be easy to make ships and houses fire proof. Unlike coal, the supply of the cane can never

be exhausted. The people of the South, in addition to supply-

ing the North with this material, should also make it one of their principal exports to Europe.

Literature in Wilmington. Previous to the war our city was fast obtaining for itself a fair name among her Southern sisters for progress in literary ability. The zenith of hard, 2 bbl of 280 lbs. her glory was reached in the winter of 1859-60, when for the first time during the existence of 515 bbls at 53c. P gallon. the place a regular course of lectures was instituted. Those lectures were given under the auspices of the Wilmington Library Association, which had then just started into being, and instead of going abroad for lecturers, ability In this State there are thousands of square enough, and that of a superior kind, was found among our own people for the instruction and pleasure of our citizens. The record of

that series of lectures is a proud one. First upon the list came Dr. JAMES H. DICK son, the first President of the Association, the first orator of the course, and one of the first and most earnest supporters of the Society. Of modet, quiet and unobtrusive manner, yet with a mind well stored with the treasures of learn-The consequences of this discovery will be of ing, eminent in his profession, and thorough and rast importance to the southern states and to the deep in research, Dr. Dickson stood confessed as one of the most accomplished scholars of the ened as to ensure a great increase of its use for State. He has passed away from the scene of his all kinds of paper, as well as new applications of labors. A victim to his own benevolence, (having lost his life in attendance on the afflicted during the yellow fever epidemic in 1862,) he has

gone to meet a sure reward. The second lecture of the course was delivered by the Rt. Rev. THOMAS ATKINSON, then as new, Bishop of the Diocese of North Carolina Bishop ATKINSON still lives, having lately sailed for Europe for attendance at the Convention of the Pan-Anglican Church.

The third orator was Hon. GEORGE DAVIS, then as now a resident lawyer of this city. But little though, did Mr. Davis or his hearers know then of the many vicissitudes which the next four interior of ships and for the walls and ceilings of years would bring to himself and to his country. After having held, under the Confederate Govern-The cheapest article of paper now in use is ment, the highest judicial position in its gift, Mr. made from straw for paper boxes. The straw is Davis has returned to this, his native city, and boiled in an open tub, ten or twelve hours, in a will devote the remaining energies of his life to

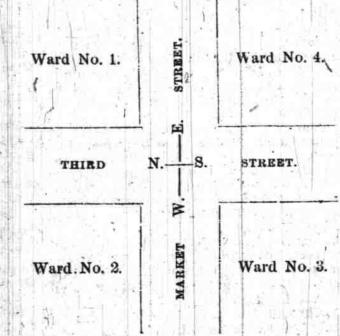

roll called a "wet-roll," until of the requisite His lecture upon Gothe will long be remembered thickness, when it is cut, and forms a sheet of by those who were so fortunate as to hear it. Mr. paper, which is dried and run between GRIER was the pastor of the First Presbyterian heavy calender rolls, and thus made into "box Church of this city, but at the opening of the war returned to his home in the North.

GRIFFITH J. MCREE, a native of Wilmington, and one of its most accomplished and talented sons next responded to the call of the Associa-This article, box board can be made from cane tion. The theme which was chosen by Mr. Mc-REE, the "War of the Regulation," was founded upon one of the most interesting chapters in the entire history of the State. It was well and cane-paper board and the straw-paper board is ably handled on this occasion, and Mr. McRee fully maintained the already well earned reputation of being well versed in the native history of

Next in order and the last of the series proper came Rev. J. S. Long, of the N. C. Conference, and at that time officiating as pastor of the Front Street Methodist Episcopal Church. Mr. Long's theme was the "Life and Labors of Bishop Bascom," and well and most ably was the subject discussed. The same lecture was delivered by Mr. Long in this city during the past spring, and we must confess that we have seldom listened to a more ready and eloquent flow of language

than that with which he is gifted. This slight sketch will give our new friends some idea of what we were before the war. What we are now it is hard to say. Some efforts were made last winter to inaugurate a series of lectures here, but with poor success. It The machinery required to make the box-board must be said, however, that the efforts were not persistent, and were only made spasmodically, from time to time. They will, in all likelihood, be repeated again during the season just ahead of us. Their success will rest with the citizens of Wilmington, as much as it will lay in the ability of the ortors, and it must be hoped, for the sake of the fair name, and the fair fame of our town, that ample encouragement will be meted out to the undertaking.

> THE CITY WARDS .- For the benefit of the community at large we publish here a table of the Wards by which each one may be able to tell at a glance, and to recollect as well the proper division of the City Wards:

REGISTRATION.—The Board of Registers begin their labors in this city this morning. The arrangements have been all perfected and the work will commence at once. The hours which have F been selected are very convenient to the people and show a forethought on the part of the President of the Board, Mr. L. N. BARLOW, which is truly commendable. For the purpose of giving all an opportunity at their own convenience to come forward, the polls will be opened at five o'clock A. M., and will continue open without closing at all, until six o'clock in the afternoon, two of the three registers remaining upon duty the whole time. By this arrangement the laboring classes of the community can, without inconvenience to their business engagements be enabled to come forward. To-day and to-morrow, (Thursday and Friday, 15th and 16th,) are the days set apart for registration in the first ward af the city. We will give in this column of to-morrow's Post the result of the registration to-day.

COUNTERFEIT MONEY .- There is quite a num ber of counterfeit bills in circulation now and the mercantile portion of this community cannot me hundred and seventy-five pounds at each dis- be too careful in receiving and paying out money. Much of it is said tobe very dangerous, having been Entil the last few weeks it was supposed to be skillfully executed, and well calculated to deceive necessary to boil the blown cane in chemicals be- the unwary. An exchange speaks of the different denominations of counterfeits as follows: First, a new and dangerous two dollar green-

> Examine all two's carefully, especially new bills of that denomination. Also, one-dollar greenbacks, close imitation, but the engraving is coarse, especially the head of Chase, which differs from the genuine in the

eyes and mouth, but more particularly in the nose, which is of an entirely different type. Five dollar greenbacks. The words "United States," compared with the original, have a scratchy appearance. In general appearance, paper and printing, they are well calculated to deceive.

#### COMMERCIAL.

WILMINGTON MARKET.

August 14th, 1867-6 P. M. The market for naval stores is steady and without material change. We note the following

POSTAGE.

Cents a year for each of the Reviews. PREMIUMS TO NEW SUBSCRIBERS. New Subscribers to any two of the above periodicals for 1867, will be entitled to receive, gratis, any one of the Four Reviews for 1866. New Subscribers to all five of the Periodicals for 1867 may receive, gratis, Blackwood or any two of the Four Reviews for 1866.

These premiums will be allowed on all new subscriptions received before April 1, 1867. Subscribers may also obtain back numbers at the following reduced rates, viz: The North British from January, 1863, to De-

cember, 1866, inclusive; the Edinburgh and the Westminster from April, 1864, to December, 1866, inclusive, and the London Quarterly for the years 1865 and 1866, at the rate of \$1 50 a year for each or any Review; also Blackwood for 1866, for

discount to Clubs, nor reduced prices for back numbers, can be allowed, unless the money is emitted direct to the Publishers. No premiums can be given to Clubs.
