MEDICINAL TO PHYSICIANS.

Preparation of Compound Extract Buchu.

New York, August 15th, 1868. Allow me to call your attention to my

The component parts are BUCHU, LONG LEAF, CUBEBES, JUNIPER BERRIES.

MODE OF PREPARATION.—Buchu, in vacuo, Juniper Berries, by distillation, to form a fine gin. Cubebes extracted by displacement with spirits obtained from Juniper Berries; very little sugar is used, and a small proportion of spirit. It is more palatable than any now in use.

Buchu, as prepared by Druggists, is of a dark color. It is a plant that emits its fragrance; the action of a steam-bath upon it; upon inspection, leaving a dark and glutinous decoction. Mine is the color of ingredients The Buchu in my preparation predominates; the smallest quantity of the other ingredients are added, to prevent fermentation; upon inspection, it will be found not to be a Tincture, as made in Pharmacopoeia, nor is it a Syrup—and therefore can be used in cases where fever or inflammation exist. In this you have the knowledge of the ingredients and the mode of preparation.

Hoping that you will favor it with a trial, and that upon inspection it will meet with your approbation.

With a feeling of confidence, I am, very respectfully, H. T. HELMBOLD, Chemist and Druggist, of 16 Years' Experience.

Having completed and added to their former facilities a large new manufactory, they hope hereafter to supply all orders promptly.
