

Your Farm - How to Make It Pay

GROW SUGAR SPUDS
SWEET potatoes are adapted to North Carolina. They help in the food supply. They are easily grown. They keep well when handled and housed properly. They are essential to any live-at-home program.

Therefore, says E. B. Morrow, extension horticulturist at State college, some sweet potatoes should be grown every year on every North Carolina farm. Nor should one consider the potatoes as an emergency crop. To the "in-and-out" the crop is a gamble but to the man who plans to have an adequate acreage each season, it is a source of food, feed and cash. "A high yield per acre at a low cost of production per bushel is essential for profit," says Mr. Morrow. "High yields are secured by planting disease-free seed stock, by setting the plants reasonably early and by using a high grade fertilizer."

Mr. Morrow recommends the use of curing houses in handling the harvested crop. For instance, he has records of 125 tobacco barns in 26 eastern counties being remodeled for housing the sweets. The total capacity was 189,000 bushels. The potatoes so cured are bringing from 10 to 25 cents a bushel more on the market than are banked potatoes.

MORE HAY
MIXING Mammoth Yellow and Laredo soybeans resulted in a larger crop of hay for P. E. Burch of Mountain Park, in Surry county, who has been following this practice for some time now with excellent results.

Last year Mr. Burch conducted a definite demonstration with County Agent J. W. Crawford. Six plots were used and the soybeans were planted on June 29. In the first plot, Mr. Burch planted seven pecks of seed per acre, using one bushel of the Mammoth Yellow beans and one-half bushel of Laredo beans. In the second plot, he used 8 pecks of Mammoth Yellow; third, 5 1-2 pecks of Ootootan; fourth, 9 pecks of Biloxi; fifth, 7 pecks of Hollybrook, and sixth, 5 pecks of Laredo.

The mixture of Mammoth Yellow and Laredo produced 4,771 pounds of cured hay an acre. The Mammoth Yellows alone gave 3,518 pounds; the Ootootans, 3,518 pounds; the Biloxi, 3,515 pounds; the Hollybrook, 3,181 pounds, and, the Laredos alone gave 3,010 pounds. The hay was cut on September 16 and weighed on September 23. Under conditions in Surry county, the Mammoth Yellow beans usually give a good yield of hay but Mr. Burch has found that by mixing this variety with the Laredos, he secures an even better yield. This is due to the Mammoth Yellows supporting the more recumbent Laredos and thus enabling a better harvest. The Laredo beans also add to the value of the hay because of the finer stems and the abundance of foliage.

Highlands

Mrs. B. A. Henderson, of Seneca, S. C., visited in the home of Mr. and Mrs. A. M. Patterson last Wednesday.

After a month's stay in Florida, Mr. and Mrs. S. T. Marett have returned home.

Grady Coffee, of Clayton, Ga., has returned home after a visit with Mr. and Mrs. R. F. Edwards.

Major Lindsay, of Seneca, S. C., was a business visitor in Highlands one day last week.

After defeating Cullowhee and Waynesville, the Highlands basketball team was eliminated from the tournament at Cullowhee by Ednyville.

Prof. William Lippincott, of Clemson College, S. C., was a week-end visitor in Highlands.

We are glad to report that Joe Reese is much better this week.

Cecil Edwards has been ill at his home in Horse Cove.

The C. E. of the Presbyterian church had a picnic supper after their regular meeting Sunday night.

The Farmer's Question Box

Timely Questions Answered by N. C. State College Experts

Question:—What causes blood spots in eggs and how can this condition be remedied?

Answer:—Eggs with blood clots or spots appear during the season of heavy production and are caused by the rupture of a blood vessel in the ovary. There is no way of correcting this condition but the eggs can be detected by candling and removed from those offered for sale. This condition, however, is only temporary and is not consistently found in the product of any one bird.

Question:—How many dahlia stalks should be left and how should the plants be cultivated?

Answer:—Leave only one strong stalk. All others that come up from the root should be removed. All beds should have deep cultivation until the plants begin to bloom after which the cultivation should be very shallow. A heavy, straw mulch can be used in place of the shallow cultivation after blooming.

Question:—Under present financial conditions would it be best to plant cheap seed or cut the acreage and plant only pedigreed seed?

Answer:—Planting cheap seed is the most expensive investment a farmer can make under any conditions. Plant a smaller acreage to the best seed obtainable. The smaller planting will, in many cases, produce as much as the larger acreage planted to cheap seed. The land thus released may be sown to legumes such as cowpeas, clover, or lespedeza as a soil building or grazing crop.

Question:—How soon after farrowing should a sow be put on full feed?

Answer:—The pigs should be at least two weeks old before the sow is put on a full ration. No feed at all should be given the first day after farrowing with a small amount of shipstuff, fed as a slop, on the second day. The ration is then gradually increased each day with the animal getting a full ration on the fourteenth day.

Question:—How far apart should I set my corn rows to plant soybeans in the middles and how much seed will it take to plant an acre?

Answer:—Corn rows should be set about six feet apart where soybeans are to be grown in the middles. This allows for cultivation without damage to the beans. With the corn rows six feet apart, it takes about twenty pounds of seed to plant an acre.

Monday night with him enroute to Hartford, Conn.

About 25 young people of Highlands enjoyed a marshmallow toast at the home of Becky Potts last Saturday night.

Mrs. A. G. Spencer and Mrs. Sam Wilson spent the day with friends in Horse Cove last Thursday.

Higdonville Girls Win Basketball Game

The Higdonville girls' basketball team defeated the Highlands girls' team, on the Highlands court, last Thursday night, 14 to 0.

Higdonville's line up was:
Ruth Berry left guard
Bert Higdon right guard
Maude Phillips Center
Helen Mason right forward
"Fussy" Love left forward

The boys' team was defeated by Highlands 16 to 6.

Boys' line up:
T. B. Higdon left forward
Hunter Young right forward
Windell Moore Center
Frank Dowdle right guard
E. G. Crawford left guard

MOLES EAT INSECTS

WHILE it may appear that moles cause tremendous damage to field crops, flower beds and vegetable gardens, the little animals are more interested in the insects and worms which they capture than in the seeds which may come their way.

"We are all familiar with the winding ridges of dirt raised by the mole in making his runways. These are feeding tunnels made by the little animal searches for the worms and bugs which are his standard diet," says A. E. Oman, rodent control leader for the United States Biological Survey at State college. "The home dens are larger cavities and ordinarily are located under stumps, rocks, stone walls or other surface objects. Sometimes field mice invade these runways and complete the destruction of planted corn or garden seeds pushed aside by the mole and thus cause the blame to fall on him."

Moles are not entirely innocent of eating seed and grain, Oman says. Often they will do much damage to bulb flowers. In eating corn, for instance, the animal hulls the germ end and eats the germ. It does not eat the starchy portion. A mole may burrow down a corn row for 100 yards and eat only the germs of five or six kernels. After that, it pushes them aside as so much clay and seeks to satisfy its avid appetite for worms and insects.

Field mice on the other hand may do considerable damage to grain crops especially where they adjoin a straw field or brush land. Moles may be controlled by trapping and field mice are readily poisoned with strychnine—treated wheat or crushed oats, the biologist says.

Broadway

Tom Smith made a business trip to Andy Wilson's Thursday.

The Rev. Oscar Nix passed through this section Saturday to fill his appointment at Tesenta church.

Quite a number of young folks of Broadway attended church at Tesenta Saturday and Sunday.

Miss Zillah Wilson made a business trip to Highlands Saturday.

Frank Cabe was visiting Andy Wilson Wednesday.

Grady Smith, of Flatwoods, made a business trip to Andy Wilson's Friday.

Bee and Jay Wilson were in Highlands Saturday.

John Brown spent Sunday on Tesenta.

SAWING A WOMAN IN HALF

ILLUSION:

A large packing case is exhibited on a raised platform. A young woman climbs into the box. Head, hands and feet protrude, and are held by spectators while the magician takes a crosscut saw and, with the help of an assistant, saws through the center of the box and apparently through the woman.

EXPLANATION:

There are many explanations for this illusion. One method of performing this illusion requires the presence of two girls in the box. One girl curls up in the left half of the box with her head and hands protruding, giving the effect you see illustrated above. The other girl is doubled up in the right half of the box, with only her feet showing. Nobody is sawed in half.

It's fun to be fooled... it's more fun to KNOW

Cigarette advertising, too, has its tricks. Consider the illusion that "Flavor" can be achieved by some kind of magical hocus-pocus in manufacturing.

EXPLANATION: Just three factors control the flavor of a cigarette. The addition of artificial flavoring. The blending of various tobaccos. And the quality of the tobaccos themselves. Quality is by far the most important. Domestic cigarette tobaccos vary in price from 5¢ a pound up to 40¢ a pound. Imported tobaccos vary from 50¢ a pound to \$1.15.

No wonder, then, that cigarettes differ in taste—since distinctive, pleasing flavor depends so largely upon the blending of the costlier tobaccos.

It is a fact, well known by leaf tobacco experts, that Camels are made from finer, MORE EXPENSIVE tobaccos than any other popular brand.

Try Camels. Give your taste a chance to sense the subtle difference that lies in costlier tobaccos... a difference that means all the world in smoking pleasure... in pure, unalloyed satisfaction.

FOR SALE
One of the Best Farms In Macon County

The J. L. Barnard place, formerly known as the W. E. McDowell farm, consisting of 240 acres, has been subdivided into small farms, ranging in size from 14 to 82 acres. This property borders the Town of Franklin. Convenient terms, with small down payments, can be arranged.
