## SATULAH CLUB GIVES DUMPLING, OYSTER SUPPER

HIGHLANDS, N. C., Feb. 17.—A chicken, dumpling and oyster supper was given by the Satulah club at the club rooms last Thursday evening, netting the club treasury about \$10. This money is being used to help pay for table silver and dishes recently purchased by the club. The table ware equipment includes about four dozen of each of necessary pieces and cost the club about \$75.

"The club is beginning to function as it should," says Miss Bernice Durgin, president, "and we are really doing the things we have always wanted and intended to do." The Satulah club is the result of the merging of the Highlands Improvement society and the Highlands Community club about two years ago. Its purpose is that of a general community club, with the idea of community improvement as its goal.

Miss Durgin also stated that new memberships are being solicited and expresses the hope that the club membership would increase in the near future.

## Legumes Increase Wheat and Corn Yields

### WHEAT AND CORN YIELDS IMPROVE AFTER LEGUMES

The illustration above shows the value of legumes in increasing wheat and corn yields. When legumes are grown and harvested for hay, they improve the soil some and a moderate increase in the yields of succeeding crops is noted. When legumes are plowed under, a much bigger increase is obtained. In a series of experiments soybeans increased wheat yields by nine bushels per acre and clover increased corn yields from 18 to 40 bushels per acre, said Dean I. O. Schaub, of State College.

## Longer Rows

Farm readers will be interested in the following figures from The Progressive Farmer, showing the saving in labor brought about by having longer rows:

1. A 20-acre field can be plowed in 60 per cent of the time required to plow the same area in one-acre fields, or 80 per cent of the time required to plow the same area in five-acre fields.

2. Where the rows are 500 yards long, a farmer can cultivate 25 acres in the same length of time required to cultivate 20 acres where the rows are 100 yards long.

3. Not only is time saved as indicated, but by having less turning the percentage of crop damaged in turning is reduced.
