

Army Wants 500 For Service in Panama

Major General George Van Horn Moseley, commanding the fourth corps area, states that he has just received another call from the War department for 500 more southern boys for service in the Infantry in Panama.

On August 27, 1937, 515 young southern boys were embarked on a transport at Charleston, S. C., destined for Panama for service in practically all of the arms and services. The 500 young men enlisting in the present campaign will probably sail from Charleston, S. C., on September 27, 1937. Upon arrival in Panama they will be assigned to either Fort Davis or Fort Clayton, the two posts in the Panama Canal Zone garrisoned with Infantry troops.

The 14th Infantry, commanded by Colonel John L. Jenkins, of West Virginia, is stationed on the Atlantic side of the Isthmus at Fort Davis. On the Pacific side the 33rd Infantry under the command of Colonel Charles F. Severson, a native of Illinois, is located at Fort Clayton.

An enlistment in the regular army today offers many attractive advantages for the young man undecided as to his future. Schools and shops are maintained where the wide-awake young soldier may learn

a variety of trades which will help him later in life, such as radio operator and engineer, auto mechanic and technician, clerk, stenographer, etc. The soldier is taught self reliance, initiative, necessity of maintaining a sound and healthful body and many other things which assist him in attaining success in his chosen work and helping him to be a good citizen.

Early application will insure selection while vacancies exist. Young men interested should bear in mind the following qualifications:

Age 18 to 35, those between 18 and 21 must have written consent of parents or guardian.

Must be a citizen of the United States, sound health, at least 5 feet, 4 inches in height and weigh not less than 114 pounds. Education equivalent to 8th grade. Single with no dependents. Must be of good character certified to by reputable citizens of his locality.

Those interested are urged to write Recruiting Office, Postoffice Building, Asheville, N. C.

Farrowing Time Is A Critical Period

Farrowing time is one of the critical periods in swine production, according to H. W. Taylor, extension swine specialist at State college.

The pigs must be protected from filth and disease if they are to get a good start in life, he added.

Before she is ready to farrow, he went on, put the brood sow in a field that has been cultivated since the last time hogs have ranged on it.

A farrowing house will increase the chances for a good litter of strong, healthy pigs, Taylor said. Plans for constructing such houses may be obtained from county farm agents.

He warned against letting young pigs go into old hog lots or pens. Keep them on clean land, preferably pasture, until they attain a weight of at least 100 pounds.

The hog outlook for next year is good, he continued. Present indications are that the prices of feed crops will be lower, and this will make it possible for producers to realize a greater return on their pigs.

Earl H. Hostetler, head of the animal husbandry department, also says that the outlook for lambs and beef cattle is improving as a result of greater production of feed crops and the consequent lower prices expected.

Even should the prices of meat animals fall off, he said, the chances are that feed prices will go down even farther, and thus enable producers to clear a bigger profit.

Timely Farm Questions State College Answers

Q. How can I cure my pullets of colds and a croupy condition?

A. As colds are usually caused by poor ventilation, over-crowding, and a poor feeding schedule, these conditions should be carefully checked and the errors corrected. All birds showing symptoms of colds such as a nasal discharge or foamy eyes should be isolated at once. The flock should be given Epsom salts at the rate of one-half pound of salts to three gallons of drinking water. Then the house and utensils should be thoroughly cleaned and disinfected. Where the disease is well established it is not economical

to treat individuals and these should be destroyed. Keep a good germicide in the drinking water as long as there is evidence of the trouble.

Q. What is the best rate of seeding for vetch, crimson clover, and Austrian winter peas?

A. Twenty pounds of seed to the acre should be used for vetch and from 20 to 30 pounds for Austrian winter peas. Both of these crops should be covered about two inches deep for best germination. Either unhulled or cleaned crimson clover seed may be used, but where the unhulled seed are used the seeding should be 30 pounds to the acre as compared with 20 to 25 pounds of the cleaned seed. This crop should be covered lightly with about half an inch of soil. All the crops may be seeded in the piedmont and coastal plain areas anytime before October 10 when soil conditions are favorable.

Q. How much time should elapse after a cow freshens before she can be put on full feed?

A. This depends upon the physical condition of the cow, but as a usual thing it requires about three weeks after freshening before the animal is on full feed. The first day's feed should consist of bran mash. For the next four days the grain ration should consist of wheat bran and ground oats in equal parts. On the fifth day the cow may be started on the regular milking ration and gradually brought to full feed in about three weeks.

Honor Roll For Oak Grove School

First grade—Sam Crunkleton.
Second grade—Bonnie Meadows.
Third grade—Christine Burnette
Fourth grade—Beatrice Ramsey
Lula Mae Jenkins, Eva Nell Clark

Fifth grade—Esco Gibson.
Sixth grade—Samuel Ramsey.
Seventh grade—Rudolph Parrish, Bedell Bradley.

Supervising Nurse Visits County

Miss Theodosia Flud, supervising nurse for the district health depart-

ment was in Macon county last week working with the county nurse, Miss Josephine Dixon. Miss Flud is supervising nurse over the Indian Reservation, Haywood, Swain, Jackson, Transylvania, and Macon counties. She expects to spend some time every month visiting with each county nurse in her district.

FARMS FOR SALE

Watch Your Kidneys!

Help Them Cleanse the Blood of Harmful Body Waste

Your kidneys are constantly filtering waste matter from the blood stream. But kidneys sometimes lag in their work—do not act as Nature intended—fail to remove impurities that, if retained, may poison the system and upset the whole body machinery.

Symptoms may be nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—a feeling of nervous anxiety and loss of pep and strength. Other signs of kidney or bladder disorder may be burning, scanty or too frequent urination.

There should be no doubt that prompt treatment is wiser than neglect. Use Doan's Pills. Doan's have been winning new friends for more than forty years. They have a nation-wide reputation. Are recommended by grateful people the country over. Ask your neighbor!
