These window boxes or flats should measure about 11 by 16 inches outside and be from two to three inches deep. Plants started in these boxes should be transplanted to other boxes or to the hotbeds or coldframe as soon as they begin to crowd. Crowded plants become spindly and worthless.

Q. How much grain should be fed a Jersey cow for maximum milk production?

A. The general rule recommended by the U. S. experiment station at Beltsville, Md., is to feed six-tenths of a pound of grain for each pound of milk above ten. However, different cows have different capacities for milk production and each cow must be studied as an individual before a definite grain feeding can be determined. By increasing or decreasing the grain allowance and weighing the milk the proper amount can be determined for the most economical production.

## HEADACHE REMEDY STARTS WORKING IN SECONDS

### THE REASON BAYER ASPIRIN WORKS SO FAST

Drop a Bayer Aspirin tablet into a tumbler of water. By the time it hits the bottom of the glass it is disintegrating. This speed of disintegration enables genuine BAYER Aspirin tablets to start "taking hold" of headache and similar pain a few minutes after taking.

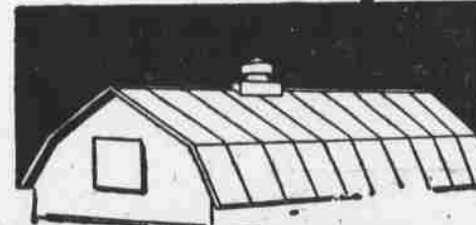

All people who suffer occasionally from headaches ought to know this way to quick relief.

At the first sign of such pain, take two Bayer Aspirin tablets with a half glass of water. Sometimes if the pain is unusually severe, one more tablet is necessary later, according to directions.

If headaches keep coming back we advise you to see your own physician. He will look for the cause in order to correct it.
