Soft Ball Is a Very Interesting Game!

It's surely a hard-hearted softball that wouldn't like to be hit for a homer by any one of these coed diamond queens at Northwestern university, Evanston, Ill., famous for its beautiful women. As soon as classes are over for the day the girls hike out for some exercise to keep curves under control.

New Product For Paint, Paper And Plastic to Use Much Mica

Announced After Experi-
ments On Ground
Mica In Paint

(From The Tri-County News,
Spruce Pine, N. C.)

Greatly increased use of finely-ground mica in industry is expected to result from the introduction of a new product called Aratone, which has lately been placed on the market. This product has been developed by the Atlantic Research Associates, Inc., of Newtonville, Mass., for the National Dairy Products corporation, according to reliable reports.

Faced with need for a market for large quantities of a milk processing by-product called casein, the National Dairy Products corporation is said to have retained the research organization to find a large scale use of this material in industry. From experiments extending over a long period casein paint, with mica as a filler, reinforcer and insulator, was developed.

Extensive trials of this new-type paint are said to show remarkable results. The cost of the new paint also is reported to be much lower than any with which it competes.

Reports are that a new casein product using finely-ground mica has been used with much satisfaction by makers of plastics and paper. Plastics are being used so extensively for such a wide variety of purposes that they offer a very wide outlet for the mica-filled casein product. A similar product also has been developed for use in making certain kinds of high-grade papers.

State College Answers Timely Farm Questions

Q. What are the requirements of a well-planned home wiring system?

A. Those farm families having power lines run into their homes for the first time should see that the wiring system provides for comfortable lighting, conveniently located switches, and a sufficient number of well-placed service outlets adequately wired and correctly fused. Extension Circular No. 213, "Wiring and Lighting the Farm Home," may be obtained free from the agricultural editor at State college.

Q. What is the effect of fertilization on pastures?

A. An occasional application of lime, phosphate, and potash to the pasture will encourage the growth of the most desirable pasture plants such as white clover and blue grass. These plants prolong the grazing period by producing both early and late grazing. As they or other good pasture plants increase in number, the less desirable ones will be crowded out. Eventually this soil treatment will result in the production of an abundant succulent pasture growth which has a much higher mineral and protein content than is found in ordinary pasture plants.

Q. When will Farm and Home Week be held this summer?

A. This annual convention for farmers and farm women will take place at State college August 1-5. Extension service officials are now making plans to produce a meeting that is both educational and entertaining. Tours of Raleigh, Duke University, and the University of North Carolina will be available to those attending. In addition, there will be motion pictures, group singing, recreation, and other entertainment. Special classes in various farm and home subjects will be taught by State college specialists.

Well Made Dress Is Better In Long Run

A good quality dress fits neatly and keeps its shape, said Willie N. Hunter, extension clothing specialist at State college, in pointing out things to consider in buying clothes.

It's better to pay a little more and get a dress that will last than to try to save a little extra by getting the cheapest dress that can be found.

Look at the center front, back of dress at the neck, and the cap of the sleeves to see that these lines are on the lengthwise thread rather than crosswise.

Be sure that the material has been preshrunk. If not, the first cleaning may result in ripped armholes and drawn back that looks too small.

Take time to look at the seams, inside as well as outside. The seams in a good dress are wide and finished so they will not pull out or fray.

However, closely woven cloths

many of them grow rapidly.

Children's clothes should be colorful and attractive, durable, comfortable, and healthful.

Other information for clothing buyers may be secured in greater detail in leaflet No. 105, "Quality Guides in Buying Ready Made Dresses," from the U. S. Department of Agriculture, Washington, D. C. Miss Hunter pointed out,

Loyal Order of Moose

HELP KIDNEYS

To Get Rid of Acid
and Poisonous Waste

Your kidneys help to keep you well by constantly filtering waste matter from the blood. If your kidneys get functionally disordered and fail to remove excess impurities, there may be poisoning of the whole system and body-wide distress.

Burning, scanty or too frequent urination may be a warning of some kidney or bladder disturbance.

You may suffer nagging backache, persistent headache, attacks of dizziness, getting up nights, swelling, puffiness under the eyes—feel weak, nervous; all played out.

In such cases it is better to rely on a medicine that has won country-wide acclaim than on something less favorably known. Use Doan's Pills. A multitude of grateful people recommend Doan's. Ask your neighbor!
