

February Rainfall Breaks Record

Ray Anderson, from the weather station at Lake Emory, reports that the February rainfall of 10.03 inches was the heaviest of any February recorded at the station, and was exceeded only by January, 1936, when the fall was 10.85. October, 1938, was the lightest month with a reading of .18 inch.

INCREASE

A 20 per cent increase in the domestic consumption of American lumber this quarter from the first quarter of 1938 is predicted by the commerce department's lumber survey committee.

A Conscientious Personal Service

Our relationship with bereaved families is one in which the experienced ability of a conscientious public servant exercises the quiet authority that brings harmony and dignity.

In our preparations for and direction of funerals we personally serve the needs and desires of all without regard to price or profit.

Our service to the living is based upon a sympathetic understanding of a family's feelings and preferences.

Anti-Nazi Demonstrators Quelled by N. Y. Police

Thousands of anti-Nazi demonstrators gathered outside Madison Square Garden in New York recently when the German-American bund held an "Americanization" rally inside the building. Mounted police and hundreds of patrolmen were necessary to quell riots. Storm troopers protected members of the bund by patrolling the aisles during the meeting. Pictured here is a photographer busy snapping pictures of a small riot in which 200 took part.

State College Answers Timely Farm Questions

Q. What is the best fertilizer for the home vegetable garden?

A. As a general-purpose fertilizer, a mixture containing 5 per cent nitrogen, 7 per cent phosphoric acid, and 5 per cent potash is the most satisfactory. Leafy crops, such as cabbage, lettuce, and kale will require more nitrogen than most other vegetables, but this can be supplied in the form of side applications of readily available nitrogen fertilizers. The time of such application will depend upon the vigor and maturity of such plants and the grower is the best judge as to when to make such applications.

Q. How soon after hatching should baby chicks have access to feed?

A. Chicks should be fed buttermilk or sour skim milk as soon as they are put in the brooder house and should have access to dry mash and water at the same time. Grain feed, however, should not be fed until after the first 7 to 10 days. This should be given two or three times a day in the mash hoppers on top of the mash. It is very essential that sufficient mash hopper space be supplied so that all chicks can eat at the same time. This will eliminate overcrowding and a resultant loss in crippled and dead chicks.

Q. When should rose plants be pruned and treated for insect and diseases?

A. Prune the plants early in the spring before growth starts and then spray the bushes with dormant strength lime-sulphur. This can be made by using one gallon of commercial lime-sulphur to seven gallons of water or one pound of dry lime sulphur to four gallons of water. As soon as the first leaves open, dust the plants with a good grade of dusting sulphur and repeat at weekly intervals throughout the season. For sucking insects, 12 ounces of 40 per cent nicotine sulphate solution should be mixed with two pounds of hydrated lime and eight pounds of dusting sulphur. Where chewing insects are present, arsenate of lead should be included in the dust.

Philip Blumenthal On Honor Roll

The news bureau of the University of North Carolina announced last week that Philip Blumenthal, of Franklin, was among the students who made the scholastic honor roll last quarter.

To make the honor roll a student must make an average grade of B (90-95) on all courses.

TRIPLES YIELDS

The application of 180 pounds of triple superphosphate on an old pasture owned by J. B. Buchanan in the Cane Creek township of Mitchell county produced three times as much forage as a nearby plot of the same size which did not receive the treatment.
