

ADDITIONAL FRANKLIN SOCIAL ITEMS

GARDEN CLUB TO MEET WITH MISS MARY WILLIS

The Franklin Garden club will meet on Monday afternoon at 3 o'clock at the home of Miss Mary Willis on West Main street for the regular monthly business and social meeting. Miss Willis will be assisted in entertaining by Mrs. W. C. Penn. All members are requested to be present.

BAPTIST W. M. S. TO MEET THURSDAY

The Woman's Missionary Society of the Franklin Baptist church will meet on Thursday afternoon at 3 o'clock at the church for the regular business and missionary program. Mrs. J. Horner Stockton, chairman of Circle No. 2, will be in charge of the program. All members are urged to be present.

Ben McCollum received a wire Wednesday morning from Mrs. Mollie McCollum, in Winslow, Ariz., telling of the death of Arnold McCollum, a brother of Mr. McCollum's, who died from a sudden heart attack at 9 o'clock Wednesday morning.

Melvin A. McDonnell, of Los Angeles, Calif., and three nieces of the Otto community, Mrs. Theda Conley and Misses Louise and Margaret Holden, went to Asheville Wednesday.

Dr. J. H. Fouts spent the weekend in Burnsville visiting his son, Dover Fouts and family.

Griddle Cakes With a Romance!

By BEULAH V. GILLASPIE
Director, Sealtest Laboratory Kitchen

Courtesy Sealtest Laboratory Kitchen

MORNING, noon or supper-time, here's a subtle combination of Griddle Cakes with a Plus, that will delight, tease and delight again! Toss 'em up for late evening snacks when appetites crave something new.

PINEAPPLE GRIDDLE CAKES WITH COTTAGE CHEESE FILLING AND RASPBERRY SAUCE

- 1 cup flour
- 1 1/2 teaspoons baking powder
- 1/2 teaspoon salt
- 1 tablespoon sugar
- 2 tablespoons butter
- 1 egg
- 1 cup milk
- 1/2 cup drained crushed pineapple
- 1 cup cottage cheese

Mix and sift the flour, baking powder, salt and sugar. Add the melted butter to the slightly beaten egg yolk, add milk and stir into the dry ingredients, mixing just enough to moisten. Fold in the pineapple and the stiffly beaten egg white. Bake in five or six large pancakes on a hot, lightly greased griddle. (This recipe

makes a soft griddle cake because of the pineapple.) Stack with cottage cheese spread between the cakes. Cut in wedge shaped pieces and serve with warm raspberry sauce, made as follows:

- 1 No. 2 can raspberries
- 1 tablespoon cornstarch
- Few grains salt

Drain the berries. Mix the cornstarch to a paste with a little of the juice. Add the remaining juice and the salt and cook, stirring constantly until thickened. Add sugar if desired. Stir in the berries. Fresh berries may be used if desired. Crush and sweeten to taste and heat. Serves six.

Nicotine Spray Cuts Apple-Washing Costs

Each year apple growers of the nation spend about \$17,500,000 in controlling the codling moth—the greatest amount spent for controlling any one crop pest—but a part of this expense can be eliminated by changing from a lead arsenate insecticide to a newly-developed nicotine spray, says J. O. Rowell, entomologist of the State college extension service.

With lead arsenate, in general use now, the farmer pays to put it on, and also pays to wash it off when the apples are sold. With the nicotine spray, the washing job may be eliminated or simplified, Rowell explained.

The new insecticide, developed by the U. S. department of agriculture and proven successful in experiments, calls for one pint of 40 per cent nicotine sulphate, five pounds of Wyoming bentonite, and one quart of soybean oil for a 100-gallon full-strength mixture. The bentonite is a fine clay that causes the nicotine sulphate to adhere to the fruit.

However, the extension entomologist explained that the bentonite does not mix readily with water, and for that reason the following procedure is recommended: Fill the spray tank with water to the top of the agitator. Pour in the nicotine sulphate before the motor is started; then with the agitator running, pour in the bentonite slowly and follow with the soybean oil before the tank is filled with water.

Rowell said orchard tests showed that the same number of sprays per season with nicotine gave better control of the codling moth than did lead arsenate. There is a gradual "build up" of nicotine on the fruit after the first spray, which makes it possible to reduce the quantity in later sprays. But in the relatively long interval between the last spray and harvest, the nicotine drops below objectionable figures. The bentonite residue is sometimes conspicuous enough to require washing or wiping, but this is rarely as difficult as the removal of heavy residues of lead arsenate, especially when used with "deposit-builders."

MEMBERS

Martin McKimmon, Laurinburg, and C. E. Upchurch, Raeford, have been selected as North Carolina's members on a control committee to administer the watermelon marketing program this year.

Farmers Advised To Harvest Legume Seed

No legume will ever become a crop of first importance in North Carolina until farmers learn to harvest their own seed, says E. C. Blair, agronomist of the State college extension service. He cited as an example the rapid spread of lespedeza in the state.

"Lespedeza never extended far beyond Union county as long as we were importing seed from Mississippi, but as soon as seed pans were introduced, the legume crop spread over North Carolina like wildfire," the agronomist stated.

"At present crimson clover is in the same position that lespedeza was years ago. Farmers want to grow it, but the seed is expensive and very few farmers have a way to save their own."

Blair explained that there is a simple, inexpensive and practical method of harvesting crimson-clover seed, which any farmer who has a patch of this crop can put into practice this year. It is by using a lespedeza seed pan, costing about \$6, and in common usage wherever lespedeza is grown generally.

The lespedeza seed pan can be adapted to crimson clover by substituting a lid of half-inch square wire mesh, known as hardware cloth, for the regular lid. The crimson clover seeds are harvested the same as lespedeza seed when ripe, but if they are over-ripe, the harvest should take place when the plants are moist with dew. In any case, spread the seeds very thinly until they are dry, Blair advised.

The aforementioned method produces seed in the hull, and not cleaned seed, but the extension agronomist says crimson clover seed in the hull will give a better stand than cleaned seed, other things being equal.

UNCHANGED

Demand conditions under which tobacco growers will market their 1939 crop are expected to hold relatively stable as compared with demand factors during the current season, predicts the U. S. bureau of agricultural economics.

GIFTS

J. C. Eagles of Wilson has donated one registered Holstein bull calf, one registered Guernsey heifer calf, and one registered Guernsey bull calf to 4-H Club boys of Wilson county. Delmon Williamson of the Rock Ridge 4-H Club received the Holstein bull calf. The other two animals will be placed later.

HERBARIUM

Nearly 5,000 mounted specimens, representing more than 1,400 species of higher plants, comprise the nucleus of the herbarium of the Great Smoky Mountains National Park in Tennessee and North Carolina.
