GROWERS of CORN HAVE FOUND ARMOUR'S PAYS and PAYS

Many experienced corn growers can tell you there's profit in using Armour's. It's rich in major and minor plant foods which help promote root and stalk growth, earlier maturity and firm, well-filled ears that command higher prices. Benefit from this experience and join the BIG CROP farmers—for a larger, finer-quality harvest yield.

Before the meeting, refreshments of coca cola and cookies were served. The meeting was opened with the Motto and the Laws. Plans for our bicycle trip were discussed. We plan to meet at the red light at 4:30 and ride out the Murphy road on Friday.

It was also decided that we would help the Boy Scouts collect paper. Knitting sweaters and other articles out of scrap wool was suggested.

Q. How can early grazing be secured from soybeans?

A. Biloxi soybeans, seeded in early April and fertilized with 300 to 400 pounds of a 3-8-6 fertilizer, will provide abundant grazing by early June. This variety of beans can be grazed several times during the summer at intervals of about 15 days if all the leaves are not removed at one time.
