Here's Guide To Profitable Dairy Farming

By S. W. MENDENHALL
(County Agent)

The dairy industry in Macon County is now definitely established and a going business. There are good markets and the price being paid for milk is high. The growth of this great industry now depends on the amount of feed produced on the farm and the care and management of our cows.

The feed required for a 12-cow herd is: 24 acres of well fertilized pasture, 18 tons of high quality hay, 36 tons of silage, 240 bushels of corn, 240 bushels of oats, and four tons of protein supplement.

Now is the time to make your pasture seeding preparations. Apply two tons of lime, 500 to 700 pounds of phosphate, 100 pounds of soda, and 200 pounds potash per acre. Top-dress with manure wherever possible. Seed 12 pounds of orchard grass and two pounds Ladino clover per acre in March. You can get your lime, phosphate, grass and clover seed through A. A. A.

Now is the time, too, to start your preparation to grow your alfalfa hay. Apply two to three tons of lime, 500 to 700 pounds phosphate on a lespedeza sod or where you intend to seed lespedeza. Don't cut this lespedeza off for hay but disk it down to form a mulch for your alfalfa.

If you expect to make 100 bushels of corn to the acre and belong to the 100-bushel corn club, you should turn your land now. Make arrangements now for your fertilizer. Use at least 500 pounds 6-8-6 or 4-8-8 to the acre. Leave the corn 14 to 16 inches in a 3 1/2 foot row. Sidedress with 200 to 500 pounds of soda at the first working and cultivate shallow.

Provide grazing as nearly all year as possible. Seed rye or rye grass for winter grazing. Give cows all the hay that they will eat. Feed one pound of 16 per cent dairy feed to each three pounds of milk. Provide constant supply of clean water. Keep cows clean and comfortable.

Milk quickly, completely, and at regular time. Give each cow a rest period of six to eight weeks with plenty of feed. Handle cows gently; rough treatment and high production are never found in the barn.

Use purebred bulls and breed for fall freshening.

More than 200,000 sweet potato plants were set out this year in Halifax county, with a resulting yield of 20,000 bushels. Thirty-two of the growers are curing 6,200 bushels in 13 converted tobacco barns.

Cows that are supplied water in bowls at their stanchions during the winter months will drink nearly 20 per cent more water than those watered twice daily. As a result, they produce 3 1/2 per cent more milk.

SPECIALS THIS WEEK

We have received a shipment of Rice's Garden and Flower Seeds.

Start your garden early. Come in and choose. Package, 10 cents.

The Customers Write!

- "34,112 MILES ... an additional 15,000 miles before tread will disappear," writes Ray Anderson, Arcadia, Calif.
- "33,527 MILES ... on Voice of Safety car ... without doubt finest tires on the road today," writes Safety Patrolman John Olson, Everett, Washington
- "36,664 MILES ... over all types of roads at comparatively high speeds ... still has good tread," writes E. B. Palmer, Denver, Colo.
- "38,376 MILES ... carrying heavy loads ... over unpaved roads," writes R. J. Morissette, Ogdensburg, N. Y.

Here's Proof of Extra Mileage in the Tire That OUTWEARS PREWAR TIRES

Testimonials like the above letters about the new B.F. Goodrich Silvertown are not uncommon. Nor are we surprised at this evidence of long mileage.

This extra mileage was scientifically engineered into the tires. First, a wider, flatter tread was developed for longer wear and greater protection against skidding. Second, to hold that huskier tread a new 35% stronger cord body was developed.

That's why we say, see us today ... equip your car with the new B.F. Goodrich Silvertown ... the tire that outwears prewar tires.
