**Warns Burley Farmers Not To Overplant**

Robert Fulton, chairman of the Macon County Agricultural Conservation Association committee, this week cautioned tobacco growers against overplanting their farm acreage allotments this year.

"Growers who harvest any acreage of tobacco in 1947 in excess of their farm acreage allotments are subject to marketing quota penalties and will not be eligible for full participation in government price support loans," Mr. Fulton stated.

Growers who plant within their farm acreage allotments can market all their tobacco without penalties and are eligible for full government price support loans, Mr. Fulton added.

In connection with price support loans, Mr. Fulton emphasized that any acreage harvested in excess of the farm acreage allotment will make all the tobacco produced within the allotted acreage on the farm ineligible for any price support loans.

**Soil Building Being Pushed In Macon, Figures Reveal**

A summary of the soil-building program in Macon County in 1946 shows that Macon farmers received 5,358 tons of ground limestone for use in cropland and pasture improvement programs. The report was made by the AAA committee.

In addition to the lime, the farmers received 1,441,000 pounds of 18 per cent superphosphate and 471,000 pounds of 19 per cent superphosphate for pastures, winter and summer legumes. The farmers paid \$13,554.50, with AAA paying the balance of \$38,426.05, the report said.

In 1946 the local AAA committee issued a total of 34,165 pounds of crimson clover and 6,545 pounds of Austrian winter peas to farmers here.

**State College Hints To Farm Homemakers**

By VERA STANTON  
Assistant State Agent

Sad experience with burned hands has taught many housewives the wisdom of using a thoroughly dry holder when picking up a hot dish. Because heat travels rapidly through moisture, it is unsafe to use a wet cloth to handle any hot utensil.

Household equipment specialists of the U. S. Department of Agriculture say both the hands and the dish may suffer if a wet cloth is used on hot glass, earthenware, or pottery. A wet cloth cools the dish suddenly where it touches, and this is likely to result in a crack or break. For the same reason, a hot dish of any of these materials should never be taken from the stove and placed on a wet table or in a wet sink. Glass cooking utensils should be thoroughly dry on the outside when they are placed on the stove. Even a few drops of water on the outside of a glass coffee-maker, for example, may cause uneven heating and result in cracking or breaking.

Left-over scraps from remodeling jobs may be used. Small, odd shapes will make favorite blocks for the baby, when sanded, painted, and decorated.

Approximately \$90,000,000 worth of farm property was destroyed by fire last year.
