

This Week With Macon County Agents

By MRS. JESSIE D. CABE
(Assistant Agent)

Harvest can be the theme for your Thanksgiving table centerpieces.

A cornucopia filled with fruits and colorful vegetables, such as edible radishes or onions, or merely decorative vegetables or flowers, is an attractive decoration for the center of the table, especially when arranged between tall candlesticks. Colorful gourds and fall flowers arranged on a polished wood slab or a section of driftwood can be very unusual and attractive. (Driftwood may be kept permanently by boiling, rubbing with steel wool and waxing.) Gourd colors repeated in dinnerware and tablecloths add much to the setting.

Dried vegetables, fruits and leaves are being attractively arranged, not only as centerpieces for informal tables, but as spots of color in halls and living rooms. Vegetables are peculiarly suited to the dining-room table.

Apple twigs, fungus, and dried okra give a unique pattern for hall-table arrangements. Use your needlepoint holders for the upright material. If you like something very simple try eggplant, grapes, and lemons clustered around the base of a graceful bare branch. Garden or field corn, mushrooms, odd-shaped squash, the center of a sunflower, or what have you, make a very colorful group.

Thanksgiving is also a wonderful time to use some of your dried flowers. Arrange the flowers to stay in permanently by anchoring them in modeling clay. Metal and pottery containers are best for these arrangements. Wood or metal trays, reed or bamboo mats and heavy bowls are also good for your fall and winter arrangements.

Variety in style and color is limited only by your imagination. Why not try using just what you have?

Sweet Aqua Dreams

So quiet you can sleep at full throttle! While not recommended practice, that is the claim made for the revolutionary "truly quiet" outboard motor shown here with Georgia Landeau in the sleeping beauty role.

The 5 1/2 horsepower unit resulting from years of Johnson research runs with a gentle purr that permits normal conversation and completely satisfactory portable radio reception at full throttle.

The new power plant utilizes intake mufflers and underwater exhaust systems which control considerable noise, but it's an entirely new principle, discovered in wartime research for the military, that really does the trick.

Through an ingenious suspension drive system, the motor is insulated from the boat, and vibrations that formerly were converted to unpleasant noise by the boat acting as a sounding board, are dissipated into thin (and quiet) air.
