A CONCRETE lot helps you raise more beef with less feed and labor

A concrete lot boosts beef production because the feed is eaten—not trampled in the mud. Less work is needed to keep the lot clean and more manure can be recovered.

The cost of a concrete barnyard is surprisingly low. Many farmers find that a paved lot pays for itself in as little as one year.

A concrete lot requires little upkeep yet puts extra profits in the bank year after year. Write for free booklet on paving feed lots.

If you need help, visit a local concrete contractor, ready-mixed producer or building material dealer.

Experienced North Carolina men build with concrete for greater safety and economy.
