Hemphill Sees Greater Activity In Pasture Improvement For Year

one of the better farming prac-tices being carried on by live-stock producers using Farmers Home Administration adjust-ment loans in Macon County, according to Ray F. Hemphill, the agency's county supervisor.

Many of the farm families in the county who farmed with the help of Farmers Home Ad-ministration loans last year, in-cluded in their farm and home plans such pasture improve-ment practices as better seed-ing, renovating, irrigation, fertilization, clipping for weed control, and rotation grazing. Mr. Hemphill said he expects

even greater activity in pasture improvement during the next

Other better farming practices being carried on by farmers in the county with F. H. A. adjustment loans include livestock improvement through management practices as improved selection, breeding, feeding, and market-

Crop improvement is also being achieved, and is expected to

Cover Crops Answer Soil Nitrogen Needs

Many Macon farmers are finding they can produce much of the nitrogen needed for next year's row crops by growing winter cover crops, reports Carl Morgan, chairman of the Macon County A. S. C. committee.

He points out that a good legume cover crop turned under in the spring will yield an equivalent of 300 to 400 pounds of nitrogen fertilizer to the

In addition, Mr. Morgan notes, legumes, as well as grass cover crops, when turned under provide a way to keep up the organic matter in the soil, to increase the ability of the soil to soak up and hold moisture, and to improve soil structure. All of these factors are important in checking erosion.

Because of the growing and plowing under of legumes and grasses is so important in conservation, it is one of the major practices in the A. S. C. program this year. In view of the many conservation benefits obtained through the protecting of the soil during winter months and turning the crop under as a "green manure" in the spring, restrictions on the acreage a farmer may put in

The Franklin Press and The Highlands Maconian THURSDAY, AUGUST 18, 1958

Singler is not a space heater that wastes heat up the chimney and on the ceiling forcing you to live in one or two rooms. Siegler is not a central heating plant with expensive installations!

Siegler is a revolutionary method of WARM FLOOR HEATING in every room BUT WITHOUT COSTLY DIRT COLLECTING PIPES AND REGISTERS

AND LOOK—don't be confused by BTU Ratings! There is BTU INPUT... there is BTU OUTPUT, but what keeps your family warm is BTU USEPUT... the working BTU's that heat your home! In BTU USEPUT Siegler OUTHEATS 'EM ALL! A 50,000 BTU Siegler gives more USABLE HEAT than much higher rated ordinary heaters. A 75,000 BTU Siegler furnace-volume heater can only be compared to a central heating plant.

MONEY BACK GUARANTEE

Slegler costs you so little to own and operate...it pays for itself again and again with the fuel it saves!
