appose they do near a solution = 1 e - apposethe South is driven out or the Loris Later party. response a third party does result

* * *

Mere mention of a third party, or course, always brigs loud protests from Southern Democratic leaders:

"Outside the Democratic party", they argue, "the South would lose its great influence in Congress, because Southern senators and representatives would lose the important committee assignments their seniority assures them. The south then would be at the mercy of its political foes. That way, the South would be sure to lose the integration civil rights battle."

" nd that is all true.

WHAT HAS IT TO LOSE?

But isn't the South losing the battle, anyway? If an't it been losing it, steadily, for years: And do on't the evidence succest it will love it even to a the duture

spite of the south' Admited in miner in Con- π^+ -, the most it denders have been the to do for it is to surrender a little at a time. That is what this nation was founded

These are not new ideas. And there are those who say they are out of date. Well, maybe, But if we junk them, we shall have wholly changed our very form of government. Should we do that without first providing an opportunity for the people to say they want it changed-an opportunity where the issue is clear-cut?

There is no such opportunity today, for there is no party that stands for these principles.

LAST BEST HOPE

The South cannot win alone. And it cannot win for itself alone.

It's last, best hope is to forget the battle and concentrate on the war; to put principle above victory; and once again to offer hold political leadership that is national in vision.

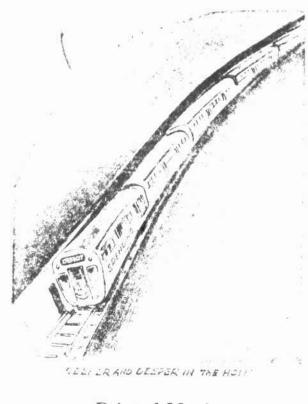

That way, it might win,

For a is not just southern Democrats who have nowhere to go. Millions, in every part of the country, Democrats and Republicans, true liberals and real conservatives, are disillusioned with both old partie sure askings. What has either party to of-

Which party, that is, offers the higher price for group and class votes?

Printed Magic

(The Florida Times-Union)

The strange magic and power of the printed word has been illustrated again not by some high-powered research execu-tive, but by a bank portr in Dausville, **Ky**. He placed a sign over the night deposit chate which read: "Out of order, Leave deposit with porter."

The customers, with their instinctive obedience to the printed word, did exactly that. The porter left for California with \$1,100.

Would the customers have been so trusting if the porter had spoken his instructions? Would they have followed the orders of an electronic device? The answer is "no." Only the printed word possesses that sort of black and white magic.

Long Range Plan For Colleges (Greensboro Daily News)

For the first time a long-range planning program, listing needs and funds, has been worked out for North Carolina's system of higher education.

Compilations made and projected by the State Board of Higher Education cover the next 10 years. Capital outlay is based on a minimum enrollment of 72,000 students in public and privately owned colleges by 1970; the "probable maximum" is set at 96,000.

To provide facilities for enrollment of such a total as the To provide factories for embininent of such a total as the board estimates, appropriations of \$90,000,000 from some source, presumably largely bond issues, will be required. While that total at first glance appears staggering, it does not appear so large when broken down by bienniums. Such a rate of ex-penditure over 10 years would be in line with what the state has been spending for similar purposes over past decades.

The advantage lies in long-range planning. College and university boards and administrators are enabled to know what they will have to do and to anticipate funds with which to do it. Lack of planning and piccemeal programs have proved costly in the past. Planning her-tofore has been largely con-fined to one biennium after another, as each General Assembly has been concerned primarily with balancing the budget for the period it serves. Continuity and vision have been miss-ing under such an understandably shortsighted policy. Long-range planning lets every agency involved know how it stands and shape up its programs and building programs accordingly.

But along with provision of physical facilities the state's But along with provision of physical facilities the since's leadership mult recognize that buildings and equipment alone do not suffice. Faculties and other trained personnel must be retained and expanded. There is withal a responsibility to realize that mounting enrollments face our institutions of meher education and that whatever facilities we have must be put to fullest and most effective usage.

Alone with heavy burdens resting upon state institutions, Alone with heavy buildens resting upon state institutions, attent to doubt not be lost, as the board of higher education points out of the role played by private and church related college in Nath Carolina. They are expected to control 32,000 of the board's estimated minimum total college encollment of 72,000 by 1970. The role that these institutions are playing and will estimute to play in the education of North Carolina's boys and with carolina the underestimated. Company that are now being conducted, especially among Methodists and Presby-terians for establishment of new colleges and expansion of old, take on added importance and meaning in the light of the state board's long-range envisionment. the state board's long-range envisionment.

As these facts stare us in the face, adequate provision of
