

Nitrogen Investment Will Pay Dividends

N. C. Experiment Station's Tests Have Proven Value, Says Garrison

By E. H. Garrison, Jr., County Farm Agent

Money invested in nitrogen for spring application to small grain will pay larger dividends than any other investment made in the production of the grain.

The North Carolina Experiment Stations has conducted a large number of tests to determine the value of various nitrogenous fertilizers, and the best amounts to use. With wheat, 100 pounds of nitrate of soda will give five to eight bushels increase. At present price, a five bushel increase will give \$3.30 per acre above the cost of nitrate of soda. Wheat will not give as large an increase for the second hundred pounds of nitrogenous fertilizer. For this reason 100 to 150 pounds of nitrate of soda is recommended.

Oats pay well for nitrate of soda up to 200 pounds. Usually the first hundred pounds will give 15 bushels increase over the first.

To get the best results, top-dressing on small grain should be done early. All this should be applied by the 15th of this month. There is no danger of frost hurting grain at this time of year.

The nitrate of soda can be applied broadcast over the small grain without any covering, but it is advisable to run over this small grain after applying the nitrate of soda with a weeder or a drag harrow with the teeth turned back.

Any of the winter crops grown for hay will pay good returns for 150 pounds of nitrate of soda per acre. The nitrogenous fertilizer should be applied to the hay crops at the same date as for grain.
