Purina Pig Chow Is the Glad Word Now

It is the feed that rounds out the pig, makes him eat greedily of the feed you give him from the farm surplus, puts flesh on his bones and makes the bones to put it on.

These days are the time to put the flesh on the pigs. A few weeks more and they will be heading for the pork barrel, and you want them to go there in form to make the barrel glad to welcome them.

PURINA PIG CHOW

Puts sausage on the corn cakes, Ham on the egg plate, and bacon with the turnip greens.

Purina in the feed room means joy in the hen house, in the cow barn, in the pig lot, and in the horse and mule stables. Purina is compounded for all live stock, on scientific principles, and of wholesome and nutritious materials.

Now is the time to plant Turnips and all Fall garden stuff.

USING Nature's GIFTS

The Carolinas' storehouses of valuable minerals have been almost overlooked. These states have the largest variety of minerals in the nation. Approximately 300 species and sub species have been identified in the Carolinas.

More thorough research to determine the extent and value of minerals is needed. Possibilities of utilization of these products in manufacturing enterprises in the two states are almost limitless. To fail to exploit these opportunities permits other states to reap the major benefits from our resources.

DEVELOPMENT POSSIBILITIES INCLUDE:

Clays:

The United States imports from 25,000 to 300,000 tons annually. Recent tests reveal that Carolina Clay meets the highest standards. North Carolina has residual and heavy Carolina, sedimentary clays.

Alloys:

Rare alloys present a new field of expansion for the Carolinas' mineral industry. Many of these, such as nickel, beryllium, titanium, tungsten, molybdenum, columbium and tantalum have not been prospectively.

Mica:

New uses developed during last several years have created a greater demand for this mineral. The Carolinas have produced more than half of the nation's output for the last several years.

Chinaware, Refractories

Electric Porcelain and Glass:

Principal raw materials necessary for the manufacture of these products (clays, feldspar, kyanite and quartz or silica) are produced in great quantities in the Carolinas. With their large power developments and the development of a new type of heat unit, these States should become the center of these industries.
