

**RUSSIA GETTING SUPPLIES.**

**Amazing Amount Pouring Into Vladivostok. From All Parts of the World War Material of All Kinds is Pouring Into This Port, Whence They Are Distributed Where Needed. All Available Places Are Congested With the Arrivals.**

Vladivostok, June 25.—Twenty thousand American freight cars and 400 American locomotives are due here from the United States within the next two months to relieve the congestion of supplies destined for the Russian armies at the front. The army corps on the German-Austrian battle line needs guns, rifles and ammunition; Vladivostok will supply them. They need armored cars, many hundreds of them, and Vladivostok will give them these. They need dynamite; they need pig lead and pig copper; they need cotton to be made into clothing; they need food—and Vladivostok hopes to see to it that they get it all.

The guns and rifles and ammunition are arriving from Japan and the United States by the steamer load. The armored motor cars are coming by the hundreds from the United States. They are being made at Detroit and Cleveland and other points and they are coming out here mostly by way of Seattle on vessels which sail direct to Vladivostok. So also is the lead, copper and dynamite. As for the cotton—it is coming out from New York via Panama in such vast quantities that more than anything else it has caused this terrific congestion of supplies which has forced Russia to place rush orders for locomotives and cars to get them off to the front. It is piled high on the hills back of the city waiting for its turn to be forwarded to Moscow and other cities to be manufactured into blankets and uniforms for the soldiers.

From Great Britain have come guns for the navy. They arrive by steamer and then are shipped by railroad to the Black Sea to be mounted on the warships Russia is building. From France has come ammunition. From the United States have come several nine-inch guns—also to find their place on Russian warships in the Black Sea. And above all, is coming barbed wire from America—an amazing quantity of it, to protect the trenches of the Russian armies.

Ships bringing these vast supplies are arriving in such number and with such rapidity that they cannot be accommodated at the docks. A plan of permanent enlargement of the port has been temporarily put aside in favor of provisional enlargement. Huge gangs of men are building pontoon piers and makeshift docks. Vessels unable to squeeze into piers are transshipping their cargoes to lighters, but a shortage of lighters has retarded even that means of discharging. So the Russians are building more lighters.

Vladivostok, they believe, is to save the day for the Russian armies, and every possible human effort is made to forward these precious supplies to their destination at the front.

The feverish activity at the waterfront is duplicated elsewhere in this great port which, while peaceful in itself, is the very incarnation of war. Every month new armies are sent away to the west. For 500 miles to the north of the Fortress of Vladivostok proper extends a series of fortified places. All these when not used as prisons for German prisoners of war, serve as drill grounds for Russian recruits. The reservists come in from all points in the eastern part of the Empire and within six months are turned into soldiers. Then they are hurried off across Siberia.—Correspondence Associated Press.

**Conquering Typhoid.**

Chicago Journal.  
The number of British troops sent to France since the war began is not exactly known, but it can hardly be less than 500,000. Vast numbers of Belgian and French fugitives passed across the war zone, and some of these had typhoid fever. The conditions seemed ideal for a terrible epidemic, yet in the first 10 months of the war there were only 827 cases, and of these 128 died.

The secret of this immunity is inoculation with antityphoid serum. A heavy majority of the British troops sent to France were inoculated, and these furnished only 308 cases and 22 deaths. The remainder—more than half the sickness and five-sixths of the deaths resulting from this disease came from the un inoculated minority.

The American Army shows an even better record for antityphoid serum, though, to be sure, our tests were made under more favorable conditions. Doubtless the French and German armies have done as well. The spectacle of typhoid being conquered in the west while those more primitive plagues, cholera and typhus fever, still prevail in Serbia and parts of Austria is a convincing proof of the value of modern sanitation.

**Combating An Outbreak of Hog Cholera.**

The farmers in the vicinity of Beardsley, Minn., experienced the ravages of hog cholera for the first time in the fall of 1913. Almost spontaneously the disease occurred on several farms in the locality so as to endanger every herd of hogs in the community. The farmers not being familiar with the disease made the danger of spreading much greater. For a time the pork industry seemed doomed to destruction.

At the time of the outbreak it was difficult to secure serum. Through the efforts of C. H. Schopmeyer, Agricultural Director in the local High School, arrangements were made with two reliable commercial serum companies for a supply of as much serum as was needed. Mr. Schopmeyer organized and conducted a real campaign against hog cholera. The local banks and business men rallied to the emergency. The banks advanced the money to pay for the serum as it was shipped in. The business men signed a guarantee to protect the banks from any loss that might occur. In case of loss in having serum left on hands, the banks were to share equally with the business men. Collections were made from the farmers as the serum was used on their hogs. No serum was left on hands and no loss in money incurred.

A serum depot was maintained from which farmers could secure serum without delay. All precautions possible were taken to get potent serum. At the outset veterinary service was inadequate, so the agricultural director was compelled to administer a large part of the serum. Later the services of a field veterinarian of the State Live Stock Sanitary Board and a graduate veterinarian were secured.

The epidemic appeared suddenly and unexpectedly and there were no previous preparations for combating the trouble, but in less than four weeks a complete check of the disease was brought about. As most of the herds of the community were in danger of being exposed to infection a general treatment of the herds was given. The serum virus treatment was given to all uninfected herds. In the fall of 1913, 2910 hogs in well herds were vaccinated by the double method with a loss of only three hogs. Nineteen infected herds were treated with a saving of 57.56 per cent.

In 1914 preparation was made early in the summer to combat the epidemic of cholera in case it occurred again in the community. The plan for handling the situation was practically the same as that of the previous year. The first infected herd was found in August. Sanitary measures were enforced and a proper disposition was made of dead hogs. The infected herds were vaccinated and those dangerously exposed were treated by the double method. In 1914 1824 hogs were treated in well herds with a loss of 2.5 per cent. Five infected herds were treated with a saving of 56.16 per cent. A general spread of the disease was prevented.

Several thousand dollars worth of hogs were saved by this efficient and effective campaign against the greatest hindrance to the hog growing industry. The work in the control at Beardsley, Minn., shows what may be accomplished by persistent effort.—Indiana Farmer.

**CHILD KILLED; THREE HURT.**

**Children Were on Wagon Loaded With Shingle Blocks. Blocks Slipped Off.**

Lenoir, July 20.—One of the most distressing accidents that has ever happened here occurred this afternoon in the western part of town near the Lenoir Veneer Mill, when one child was killed instantly, and three others were more or less seriously injured by being thrown from a wagon loaded with shingle blocks. The children all belonged to S. Wynn Hayes who lives near the scene of the accident. It seems that the team had been left in the hands of Mr. Hayes' 14-year-old son to drive down a very steep hill, and thence along out to the public road, while the father took a near cut across to the road. While passing down the steep hill the blocks slipped off in front of the wagon, carrying the children with them. One of the children, a little boy four years old, was crushed to death by the blocks, while another suffered a broken leg and other injuries about the head and arm. Another one of the children was believed to have been fatally injured internally, but reports tonight state that she is still living and will likely recover. The fourth one escaped with slight injuries. The three injured ones were carried to the local hospital for treatment.—Charlotte Observer.

Lawyer—"So you went out and waited for some time on the pavement. Now, did you strike the witness in the interim?" Defendant—"No, I didn't. I patted him in the jaw."—Chicago Herald.

**DANIELS NOT TO NAME BOARD.**

**Will Let Scientific Societies Decide on the Members. Eight Different Bodies Are Asked to Act.**

Washington, July 19.—Sixteen American scientists to form with Thomas A. Edison as chairman, the advisory board for the proposed bureau of invention in the Navy Department, will be selected by leading scientific societies of the country. Secretary Daniels has written to the presidents of eight societies asking that two members be selected by each organization to become members of the board.

Following are the societies addressed: American Chemical Society, president, Charles H. Herty, Chapel Hill, N. C.; American Institute of Engineers, president, Paul M. Lincoln, Pittsburgh; American Institute of Mining Engineers, president, Benjamin B. Thayer, New York city; American Mathematical Society, president, E. W. Brown, Yale University; American Society of Civil Engineers, president, Hunter MacDonald, Nashville, Tenn.; American Society of Mechanical Engineers, president, James Hartness, Springfield, Vt.; American Aeronautical Society, acting president, Frederick W. Barker, New York city; Inventors' Guild, president, Edward Weston, Newark, N. J.

Mr. Daniels explained that the selection of the eight societies did not exclude other organizations of the same character which it might be found advisable to call upon later, as there is no final limitation on the membership of the committee. He said that societies of marine engineers, in many cases composed largely of present and former Navy officers, had not been included for the reason that Navy officers would constitute the new bureau within the department which the committee would aid.

**Are Your Farm Implements Under Shelter?**

The breaking plows, the harrows, the planters and many other implements used about the farm have largely finished their work for this season, and one of the most useful economy measures that can be put into practice right now is to see that they are perfectly housed and cared for. Attention to such matters marks the good farmer, and inattention to them shows a carelessness that is sure to be reflected in a run-down farm and decreased profits.

Depreciation is the biggest expense connected with nearly all farm implements, and the wise farmer will see that it is held down to a minimum. We have known farmers who have used grain binders ten or a dozen years and that are still in good condition; on the other hand, we have seen other farmers buy a machine almost identically the same and put it on the junk heap in three years' time. In the first instance the machine was carefully handled while in the field, and as soon as its work was done it was carefully cleaned up and overhauled, all broken parts repaired, and carefully housed in a dry shed. In the second case the farmer's binder went to pieces because lost or broken parts were never attended to and because its only shelter from June till June again was a spreading oak in front of the house.

Nor is this all. We have seen high-priced threshing machines, mowers and rakes, breaking plows, in fact, every kind of implement used about the farm, lying out, season after season, with apparently never a thought given to the hard dollars they cost. Look to these things, Brother Farmer, and look to them now. It's a dollars-and-cents, bread-and-meat proposition.—Progressive Farmer.

One of the nation's biggest mail order houses did a gross business of over \$7,550,000 in June. The half year total of \$53,000,000 suggests American prosperity.

**EMIT NEWS ITEMS.**

**Death of Mrs. Ida Mae Strickland. Personal Notes of Interest.**

Our community was greatly shocked Friday morning when it was learned that Mrs. Ida Mae Strickland, (nee Richardson) had passed away. She had been sick for about seven weeks with tuberculosis, but she bore it with great patience without a murmur. She did not mind the sting of death for God was with her, we believe, for she would often sing praises to Him. She was just in the bloom of life, passing away at the early age of twenty-one years. She joined the Methodist church quite young, and was always a faithful member. She will be greatly missed, for she was loved by all who knew her. She was such a good and cheerful girl. She was staying with her brother, Mr. Heff Richardson near Wendell, at the time of her death. She was brought to Watkins' Chapel Friday afternoon and laid to rest in the presence of a large sorrowing congregation. Her funeral was preached by Rev. G. W. Starling, of Zebulon. May God's blessings be ever upon the bereaved ones.

Miss Addie Wilder spent Saturday night with Miss Lina Lee. Mr. Vernon Strickland has just finished his business course at King's Business College, and is spending his vacation with his parents, Mr. and Mrs. Bennett Strickland.

Prof. Lee, of Middlesex, was in our burg Sunday. Mr. and Mrs. W. V. Lee visited at Mrs. J. R. Madon's Sunday, near Zebulon. Mr. and Mrs. Jim Wilder spent Saturday night with their daughter, Mrs. J. E. Hocutt.

Misses Grace High and Ruth Moezelle visited at Middlesex Saturday. Emit school boys played Middlesex Saturday afternoon and as usual the winning side beat, 14 and 0 in favor of our home team. Tippet pitched his first game with great success. REPORTER.

**MICRO NEWS.**

Miss Louetta Pittman has returned from Cullowhee where she has been at school, since June 15th. Misses Lerma and Laura Bridgers, of near Kenly, visited Mr. Jimmie Pittman Saturday and Sunday. Messrs. Elijah and David Scott, of near Kenly, visited their uncle, Mr. B. Scott, Sunday.

Mr. and Mrs. H. Roscoe Ballance spent the week-end with relatives in Wilson County.

Mr. Rual Holland spent a few days here with his sister, Mrs. A. F. Bowers.

Tobacco in this section has improved a lot for the last 10 days. REPORTER.

Mount Sanary, in the eastern chain of the Andes in South America, is the most active volcano in the world. It has been in constant eruption since 1728.

**WINSTON-SALEM MAN SAVED FROM DEATH.**

**J. E. Erwin Says Wonderful Remedy Brought Him Astonishing Relief.**

J. E. Erwin of Winston Salem, N. C., was for a long time the victim of serious disorders of the stomach. He tried all kinds of treatment and had many doctors. One day he took a dose of Mayr's Wonderful Remedy and was astonished at the results. The help he sought had come. He wrote: "I am satisfied through personal use of the life-saving powers of your Wonderful Remedy. You have saved my life. I could have lived but a few weeks more had it not been for your remedy. I am inclosing a list of friend sufferers who ought to have some of your remedy."

Mayr's Wonderful Remedy gives permanent results for stomach, liver and intestinal ailments. Fat as much and whatever you like. No more distress after eating, pressure of gas in the stomach and around the heart. Get one bottle of your druggist now and try it one an absolute guarantee—if not satisfactory money will be returned.—Adv.
