### HEALTH FORCES TO FIGHT PELLAGRA

Dr. C. C. Massey, Johnston county health officer, has received a copy of a letter sent to the State Department by Dr. W. C. Linville, superintendent of the state hospital at Goldsboro, showing that pellagra and tuberculosis are not only problems for the board of health and the physicians but are economic problems. Their cure comes through a balanced ration—more green vegetables, more eggs, more milk, more red meats.

The letter from Dr. Linville is as follows:

"We have just recently completed our reports for the past six months' work connected with this hospital and in it I find some statistics that I think may be of service to you in your work. We had on an average of 1674 patients in the hospital and admitted, during the six months, 267 patients with 154 deaths. Of this 267 patients admitted 59 patients' insanity was traceable directly to pellagra and 78 of these their insanity was traceable to syphilis. Our previous records show that we had, as a rule, eight to ten female patients to one male admitted with pellagra, but this report shows that there were practically as many male patients admitted with pellagra as female, and of the 59 patients who died from this disease 29 of them were male and 30 female.

"Our results from treating pellagra patients for the past six months have been very unsatisfactory.

Miss Beatrice Lynch, Mrs. Lark in Lynch and Mr. Millard Lynch were visitors in Raleigh Monday.

Miss Beatrice Lynch spent last Sunday with Miss Alice Murphrey near Archer.

factory. The cases brought here are in a more severe form than we have ever had before. We are trying to enrich our diet for pellagra patients all the time and hope to continue to do so. I feel that the Governor's program of Live at Home, if abided by by the people, especially in eastern North Carolina, will be far-reaching in its effect on this class of patients.

"Our death rate from tuberculosis for the past six months has been on the increase."

The State Board of Health knows enough of pellagra to be in position to advise that it is not confined to the cotton mill villages and the people who work in mills. It is in every section of the state. It is increasing by leaps and bounds and it has already come to be of such serious, economic import that industry is being emphatically affected by it—most particularly, agriculture.

Sick labor is a liability. It must be met by communities and by the state. Adequate nutrition, perfected by a balanced ration, is an economic necessity. Like Napoleon's army, agriculture and all other types of industry, if it progresses, must go forward on its belly.

titles us to speak for the ex-service men."

"We now have more than 7,500 members of the Legion in North Carolina, by far the largest membership we have ever had at this time of year. Commander Freeman has designated the week of January 26 to February 1 as 'Round-Up' Week to secure 9,800 more members necessary to give us our state's quota this year. On Monday, the 27 the post will set to work its committees arranging for a meeting of the post to be held Tuesday night at 8 p. m., at the armory in Smithfield, when General Albert L. Cox of Raleigh will deliver an address on the aims and purposes of the Legion. On Wednesday our membership committees will canvas every ex-service man of the community to afford them an opportunity to enroll. On Thursday active posts will assist less active posts in this work, and on Friday this post will send its cards by special courier to Raleigh where they will be turned over to the district commander. Saturday the district commander will personally dispatch these cards from that point to department headquarters. Department (State) headquarters will announce the results over the radio Saturday night.

### Still More Millions Treat Colds Direct

Round-About Method of "Dosing" Gives Way To Modern Vaporizing Salve

More and more people each year are giving up the slow, indirect way of treating colds by "dosing" with internal medicines, and are adopting the modern direct treatment—Vicks VapoRub.

Vicks goes direct to the affected parts and checks the cold in two ways—its medicated vapors, released by the heat of the body, are inhaled direct to the inflamed air passages; at the same time it acts direct through the skin like a poultice or plaster, "drawing out" tightness and soreness.

Vicks is especially appreciated by mothers because it is just rubbed on, and therefore, cannot upset children's delicate stomachs as "dosing" is so apt to do. Today the whole trend of medical practice is away from needless "dosing."

To keep pace with the ever-growing demand for the famous slogan, "17 Million Jars Used Yearly," was raised to "21 Million" a short time ago. This figure too has been outgrown, as there are now "Over 26 Million Jars Used Yearly"—a jar for every family in the United States.
