BEE'S Laxative HONEY AND TAR

An improvement over all Cough, Lung and Bronchial Remedies. Cures Coughs, Strengthens the Lungs and Gently Moves the Bowels.

Pleasant to the taste and good alike for Young and Old.

PREPARED BY Pincole Medicine Co., Chicago, U. S. A. S H. ELLISON & Co

The most wonderful cure for piles is ManZan, put up in collap-sable tubes with nozzle attached. It reaches the spot, stops pain in-stantly, and cures all kinds of

COAL OIL A CONSUMPTION CAURE 7 ANCESTRAL BREAKFASTS. It is Also Said That Crude Oil/Is Not. How the Meal Had Its Origin Centur

Bad Tasting.

If we only knew it, Providence, has provided for us a panacea, for a i the ills of life. The Kansas, City 5-tar is responsible for the statement that crude coal oil is a sure cure, for lung trouble, and that persons who work in the oil fields, even those who show evidences of a well developed case of consumption when they begin the work, become ragged and strong.

This statement is made by one who has worked in oil fields from Egypt to California:

"Any tenderfoot knows there is coal tar and there is sulphur in oil. There is lots of both in this Kansas oil. The driller and tool dresser and sometimes the man who is putting up the money and bossing the job gets this stuff in their eyes and their noses and there clothes. You can't smell anything else.

"What does sulphur coal tar do for a man?"

a man?
"Now, I have seen hundreds of men go to work in derricks, who did not have enough wind in them to propel them across the street. They would kind of lay around and handle the tenderly at first as if they were to break.

"The first thing I do is to make them drink some of the crude. Ever drink crude? Try it. It is good straight, but some of the fine-haired boys like to take it soaked in a lump

there are hundreds of crude fiends. I expect to see the time when crude is sold by the small bottle, just as it is by the barrel, and all the lunger camps will go out of business. If a man will stay by crude oil he will never have lung trouble and if he has lung trouble he will last longer on a crude-oil diet than on anything else. That's all I've got to say about it."

Canada's Militia.

As a result of the quarrel which re-rently led to the curt dismissal of Lord Dundonald, the British general officer commanding the military forces in Canada, the Canadians have been confronted with the unsuspected fact that their military organization is largely a skeleton. Lord Dundonald declared that although there are more than 200,000 able-bodled Canadians who have served in the militia and are available for service, there are in the dominion not enough rifles to supply the 40,000 men now in the service. There are no large guns no general equipment worthy of the name and only a single cartridge factory to only a single cartridge factory to draw upon for supplies. This state-ment has excited widespread indignation among Canadians, whose mani-fest purpose is to insist upon a sweep-ing reform in the entire system of ing reform in the entire system of militia administration. It is proposed hereafter to depend upon home talent for the command of the militia, and Lord Dundonald promises to be the last imported British soldier to hold the position of commander-in-chief.

The Most Ancient Coin.

An archaeeological find of the greatest interest has just been made by Pastor Lohman, chairman of the German Society for Scientific Research in Anatolia. During his recent journey in North Syria a coin of pure silver, excellently preserved, was offered to him, which, on examination, proved to bear a perfect Aramean inscription of Panammu Bar Rerub, king of Schamol, who reigned \$00 years before Christ. It is believed to be the oldest known coin in the world. Up to the present Lydians have always to the present Lydians have always been regarded as the inventors of mo-ney, but this new find shows that the Semitic Arameans, who lived two cen-turies before the Lydians, are the old-

Fish by the Billion
One no longer speaks of hatching
thousands of young fish by artificial
means, but of millions and hundreds of The number of eggs, fry fingerlings and adult fish distributed by the United States Bureau of Fish-eries in one year aggregated 1,500, 000,000. It is certain that the shad, whitefish, lake trout and pike perch fisheries, each of vast importance, have not only only been saved from entire depletion, but that they have been maintained, chiefly through artificial propagation, at a high degree of productiveness. That these fisheries are industries to-day, valued at nearly \$3,000,000 annually, is due entirely to artificial propagation.

Largest Map of the World. The largest map in the world is the renance survey map of England, conremance survey map of England, containing 108,000 streets, and costing \$1,000,000 a year for twenty years. The scale varies from 10 feet to one-eighth oof an inch to the mile. The details are so minute that maps having a scale of 25 inches show every hedge, fence, wall, building and even every isolated tree in the country. The isolated tree in the country. plans show not only the exact shape of every building, but every porch, area, doorstep, lamp post, railway and

Business Tattooed.

Some of the Japanese tradesmen in the smaller towns of Nippon have a curious way of advertising their business. On their right forearms they tattoo figures—the shoemaker a shoe, the woodcutter an axe, the butcher a cleaver. Undergreath these amblems cleaver. Underneath these emblems are such inscriptions as, "I do my work modestly and cheaply," or "I am as good at my trade as most of my fellows." When they are looking for work they bere their arms and walk shout the streets.—Exphanes about the streets.-Exchange.

Pauperism in London.

Do we appreciate the condition of London's poor? In one week 110,405 persons had to apply for charity, be-sides the regular army of vagrants numbering 1,206 able-bodied and crip-pled privates. In England and Wales dition here would stir us up mightily.

Pinesalve contains the antiseptic properties of the native pine, and is a sure cu e sunburn tan, tetter, eczema and all other skin diseases.

How the Meal Had its Origin Centur-les Age.

According to the Oxford dictionary
1463 is the date of the earliest mention
of breakfast, but until a century ago
it consisted only of a draft of ale or
tea or chocolate. There were only
two meals a day—dinner, ranging
from 9 o'clock in the morning in the
fittenth contury to recent the fifteenth century to noon in the seventeenth, and supper, which similarly advanced from 5 in the afternoon to 7 o'clock. Pepys, for instance, went down to the admiralty at 4 or 5 in the morning on no other breakfast than half a part of street of the seventeenth of the seventeent morning on no other breakfast than half a pint of wine or a dram of cordial. But in the eighteenth century dinner was gradually postponed until 5 or 6 o'clock in the afternoon. When it passed midday breakfast became a necessity and a meal. Before this hunger had demanded the addition of bread and some such relish as radishes to the morning draft.

But when, a hundred years ago, cold meals and fish began to be served at breakfast the utmost surprise was expressed. Its novelty made it fashionable and led to the giving of breakfast parties, of which Mr. Gladstone's were the last. Eleven or 12 o'clock was the hour and it was declared to be par excellence the meal for poets.

cellence the meal for poets.

Tom Moore was an inveterate breakfaster and after the trencher work sung for the company's entertain

ment.

Breakfast finally became an institution, as a necessary oasis in the long
stretch between supper overnight and
dinner the next afternoon. This acceptance of breakfast a century ago
thus made England for the first time
a three-meals-a-day nation.

What an Atom Is.

How large is an atom? "Perhaps the simplest though not the most ex act way of arriving at a rough esti-mate of the size of atoms is by meas-uring the thickness of a soap-bubble film, where it is as thin as possible just before it bursts," says a writer. "Such a film, if composed of atoms must be something like a pebble wall Now a pebble wall would not stand if it were not several pebbles thick if it were not several pebbles thick and if we had reason to suppose that it was about a dozen pebbles thick we could easily make an estimate of the size of a pebble by measuring the thickness of the wall. That is the case with the thinnest region of a soap film. It is found to have a very definite and uniform thickness it is the thinnest thing known and by re-fined optical means its thickness can be accurately measured. It must connned optical means its thickness can be accurately measured. It must con-tain not less than something like a dozen atoms in its thickness and yet it is only about the twenty-millionth of an inch in thickness by direct meas-urement. So that the diameter of an atom comes out between one two hundred-millionth and one three-hun-dred-millionth of an inch. In other words from about 200,000,000 to 300,-000,000 of atoms can lie edge to edge in a linear inch."

WISE AND OTHERWISE.

As a rule there is fire where there is but occasionally the smoke comes from a pipe dream.

You can find the man you owe in half the time it takes to find the one who owes you.

A man doesn't believe in luck if he is having the right kind. The wise man takes a back seat and watches the fool but into danger.

Politicians are men who try to save

A person can live on 12 cents a day -but few people are willing to do tt.

Where Cold Kills. Klondike River is fed by numerous sods springs and even the winter's. soda springs and even the winter's cold fails to close them entirely. Walking on the edge of the ice near the shore, a miner one day slipped into six inches of water. In a moment he was out and hastening to the brush hard by to light a fire before his feet froze. Rapidly he cut a few fragments of wood with his heavy pocketknife. But the unlighted match dropped from his already chilled fingers, for he had rashly removed his mittens in order to use the knife with mittens in order to use the knife with more freedom. Then he lighted a second and a third and finally several at one time, but either his haste or at one time, out either his haste or perhaps a sigh of the air caused them to fall on the snow. All this time the frost was seizing his limbs, his body, his heart, his mind. He turned to the fatal mittens, which he never

Making Imitation Pearls.

Among all precious stones few are so extensively imitated as the pearl. so extensively imitated as the pearl.

The real tritcle is a silvery white, iridescent gem, extracted from the pearl oyster. The real pearl is really an unfructified egg of the oyster. Its imitation is arrived at by a chemical process. The liquor employed in the manufacture is called "essence d'orient." The base of this compound is prepared by throwing into water of ammonia the brilliant scales of a small river fish called the blay.

Expectation of Life.

A French mathematician gives the following rule for calculating the age to which the average human being may reasonably expect to attain. The rule, however, is not applicable to children under twelve, and it will not work with persons over eighty. Subtract year, present age, from eighty-six, divide the remainder by two, and the result will give you about the same number of years as the tables of mortality used by the life assurance companies.—Exchange. A French mathematician gives the

bronchial affections without due regard for the stomach and bowels, hence most of them produce con stipation. Bee's, the original Laxative Honey and Tar, gently moves the bowels and cures all coughs, colds, croup, etc. Bee's Laxative Honey and Tar is the original Laxative Cough Syrup. Look for the letter B in red on every package. "Sold by All Dealers."

BACKGROUND OF THE EYE.

A European Physician Has Su in Photographing It.

According to a German Exchange the assistant of the university clinic of the Royal Charity Hospital, Dr. Walther Thorner, has succeeded in solving a problem which had received much attention from many others before him, but with little or no success. He has managed to photograph the background of the eye and obtain good pictures of it, too. His invention represents a material improvement on the op'thalmoscope invented by Heimboltz in 1850. The latter, however, only admitted of viewing the background of the eye.

The fact that all attempts to photograph the interior or the background of the eye had remained fruitless so far was due to the peculiar construction of the eye. It is difficult to light up the interior to such an extent as to enable one to take a photograph of it, and even in the use of strong sources of light the exposure would require so much time that the eye would have to be fixed, which would greatly inconvenience the patient. Now Dr. Thorner has constructed an apparatus with which he first succeeded in photographing the eyes of animals, especially cats.

No Chances in Amazon Region.

No Chances in Amazon Region. United States Consul Ayme at Para Brazil, sounds a note of warning for the benefit of those who think there is a golden field for exploitation in the Amazon region of South America. "I despair," says Mr. Ayme, "of finding language strong enough to express the utter and absolute hopelessenss of suc-

cess that awaits any of those unhap-py enough to attempt to make even a bare living on the banks of the migh-ty Amazon. I do not say that the acguisition of a fortune or a competence is difficult, doubtful or impossible; I say that such a miserable existence as would disgust a Digger Indian would be hardly obtainable by one man in 10,000 of such as are thinking of coming here. It may be that there are places in Brazil where colonists might any such places." The rubber trees, Mr. Ayme says, are widely separated and they can only be reached by foreing one's way through a thick-matted almost impenetrable swamp forest which produces very little food for human beings.

Causes of Insanity.

ing together.
"What would you imagine to be the chief cause of insanity?" the alienist

"Alcohol," said the publicist.
"Right," returned the other. "A
census has been made of 136,000 lunatics, and it has been found that 18,

"Well, there was overwork. There was love. There was old age. There was sunstroke. But these causes were insignificant in number beside alcohol, Love, for instance, had brought on 2, the same of the 224 cases of insanity; overwork, 761; sunstroke 1,686.

"Any strange causes?"
"Oh, yes; there was dyspepsia; there was fright; there was disappoint ment, there was joy. One man went mad over the loss of his foot in a railmad over the loss of his foot in a rali-may accident; another over the sud-den inheritance of a large fortune; a third over his wife's death. Among the 136,000 persons we have been dis-cussing, 3,796 were victims of some sort of religious mania—of Buddh-ism or Taoism, or Biavatskylsm.— Washington Post.

DRIFTING

Many people who are neglecting symptoms of kidney trouble, hoping "it will wear away," drifting towards Bright's Disease, which is kidney trouble in one of its worst forms.

stops irregularities, strengthens the urinary organs and builds up the worn-out tissues of the kidneys so they will perform their functions properly. Healthy kidneys strain out the impurities from the blood as it passes through them. Diseased kidneys do not, and the poisonous waste matter is carried by the circulation to every part of the body, causing dizziness, backache, stomach trouble, sluggish liver, irregular heart action, etc.

If you have any signs of Kidney or Bladder Trouble commence taking FOLEY'S KIDNEY CURE at once, as it will cure a slight disorder in a few days and prevent a fatal malady. It is pleasant to take and benefits the whole system.

How to Find Out.

You can easily determine if your kidneys are out of order by setting aside for 24 hours a bottle of the urine passed upon arising. If upon examination it is cloudy or milky or has a brick-dust sediment or small particles float about in it, your kidneys are diseased, and FOLEY'S KIDNEY CURE should be taken at acce.
