

OLD CLOTHING WILL SAVE LIVES IN ARMENIA

Send Your Cast-off Winter Garments to Near-East Relief—Help Humanize the Moth and Save Human Lives.

Housewives, clean out your clothes closets! Send all available warm clothing to the Near-East Relief.

This is the message sent to all homes in North Carolina on the eve of the Near-East Relief "Bundle Day" May 1-4, by Dr. E. C. Brooks, State chairman for the clothing drive.

Dr. Brooks is asking North Carolinians to contribute 150,000 pounds of warm, usable cast-off clothing at this time. This, it is estimated, will save 20,000 human lives next winter.

Last winter many women, children and old men were found who had dragged themselves for miles, suffering from acute rheumatism or pneumonia, simply from lack of clothing.

Dr. Brooks asks that all clothing be sent to the local Near-East Relief chairman or sent to the Near-East Relief Clothing Warehouse at Raleigh. Many schools are being used as receiving stations.

Speculation on how many ages ago the basic principle of the modern motor car wheel was discovered has been revived sharply by the find of several richly ornamented chariot wheels in the tomb of King Tut-Ankh-Amen at Luxor, Egypt.

One way the motive engineers of the ancient king's time gained the desired wheel strength was by using an excessively long hub with a small diameter to reduce friction and help in holding alignment.

The Near-East Relief, on account of the rigors of an Armenian winter, cannot use lace veils, diamonds, eye-lag clothes, gaiters, slippers, muslin underwear, high-heeled shoes, straw or felt hats and silk stock.

The first live boll weevil reported to Franklin Sherman, state entomologist, was found near Aberdeen in Moore county, by Dr. R. W. Leiby. Another was found on April 20 at Dunn in Harnett county and another on April 20th at Aberdeen.

A farmer in Pitt county built a sweet potato house at the suggestion of the county agent two years ago. This spring he has sold 200 bushels of potatoes in the town of Ayden at \$1.25 per bushel and is selling about 200 bushels more for bedding at \$1.50 per bushel.

B. S. Courtney WILLIAMSTON, N. C.

NOTICE OF SALE

Under and by virtue of the power of sale contained in that certain deed of trust executed by Julius S. Peel to the undersigned trustee, and bearing the date of February 14, 1922, and of record in book G-2 at page 425 of the Martin county public registry, said deed of trust having been given to secure the payment of a certain note of even date and tenor there with and the terms and stipulations therein contained not having been complied with, and at the request of the holder of the said note, the undersigned trustee will on Monday, the 16th day of May, 1923, at 12 o'clock, m., in front of the court house door of Martin county at Williamston, N. C., offer for sale to the highest bidder at public auction for cash, the following described tract or parcel of land, to wit:

All that certain tract or parcel of land lying, being and situate in Williamston township, Martin county, North

DOES AWAY WITH THE HISS

Recent Invention Also Captures Harmonics Which Hitherto Have Been Completely Lost.

A new use has been found for the remarkable device which photographs sound on motion picture film and then reproduces the sound from the film. C. A. Hoxie, the inventor, has now devised a pickup or microphone, using the principle of the pallophophone reproducer.

The microphone is the link between the artist or instrument in the studio and the electrical circuit; it converts or transforms the vibrations of tone into corresponding variations of current. Microphones now in general use are constructed on the principle of the telephone transmitter in which the compression or expansion of granular carbon affects the electric current.

In the pallophophone pickup a very sensitive diaphragm is set vibrating by sound. The movement of the diaphragm is communicated to a mirror three sixty-fourths of an inch square. A strong light strikes the dancing mirror, which reflects the light beam at a sensitive light cell. The variation in the beam of light, caused by the vibration of the mirror, varies the effect on the light cell and thus produces a corresponding variation in the electric circuit. Amplification is then obtained in the ordinary way by means of pilotrons.

The new pickup eliminates the hiss which accompanies the use of the ordinary microphone; it is more sensitive and responds more readily and accurately to sound waves, capturing harmonics which would ordinarily be lost.

PRINCIPLE IS NOT "MODERN"

Ancient Egyptians Built Chariot Wheels That Correspond to Those Used on Autos Today.

Speculation on how many ages ago the basic principle of the modern motor car wheel was discovered has been revived sharply by the find of several richly ornamented chariot wheels in the tomb of King Tut-Ankh-Amen at Luxor, Egypt.

Expert scrutiny shows remarkably "modern" notions in these wheels which carried Egypt's Pharaohs thirty-five hundred years ago. The hub, spokes and rim construction have graceful outlines combined with great strength. The wheels were used on chariots probably designed for war, which involved driving at top speed across rough ground and often crashing into other war chariots.

One way the motive engineers of the ancient king's time gained the desired wheel strength was by using an excessively long hub with a small diameter to reduce friction and help in holding alignment. Motor car hubs today make use of the principle. In the bronze used for spindles and bearings the Egyptians had a bearing metal modern workers never have been able to duplicate. The tempering of bronze to marvelous hardness is regarded as a lost art.

King "Tut" had "puncture proofs," too, but their construction hardly would be practical for the average modern motorist. Several of the richly ornamented chariot wheels unearthed had tires of gold.—Kansas City Star.

Jujutsu in High School

The Japanese high school at Honolulu has opened a class in jujutsu for girls. This step was taken because of the many recent reports of assaults upon women and girls in Honolulu, and from the results that are being obtained from the instruction in the Nipponese art of personal protection it is believed that the next person who attempts to molest a Japanese girl will meet with a surprise.

Graduates from the course are expected to be able to defend themselves against the attacks of much larger persons and to inflict swift counter-punishment.

The small stature of the Japanese girls is expected to be no handicap. More than forty girls are enrolled in the classes.

Frank "Bridge" Hands

H. T. Webster, the cartoonist, recently made a picture of what he considered to be an unbeatable bridge hand—eleven spades, from the ace to the four-spot, with the ace of hearts and the ace of diamonds. He captioned it: "And the bid is seven spades doubled and redoubled."

Willbur C. Whitehead, managing director of the Knickerbocker Whist club, took one look at the picture. "Suppose," he said, "one of his opponents has no hearts and the other no diamonds. One leads a diamond, the other ruffs it and returns a heart, which is trumped. It is a good idea to remember that when you hold a freak hand, someone else has one, too."

Big Task for Britain

The war debt Great Britain agrees to pay the United States is \$4,604,128,965.

That is \$317,965,198 more than the value of all the gold and silver in the United States in 1922—\$4,287,122,287, says Capper's Weekly.

It is \$2,902,228,665 more than the value of last year's corn crop in the United States—\$1,802,900,000.

It is \$2,411,128,685 greater than the value of last year's cotton crop in the United States—\$1,192,461,000.

It is \$2,951,530,485 greater than the value of last year's coal production in the United States—\$1,651,223,000.

It is \$2,563,501,593 greater than the total value of last year's South African diamond production—\$1,040,826,272.

Carolina, containing 331 acres, more or less and bounded on the north by lands of Arthur Williams and J. H. Mizelle; on the east of A. Williams and J. N. Hopkins; on the south by lands of J. N. Hopkins, Mrs. J. B. Harrison, the Riddick lands and the Williamson and Jamesville road, and on the west by C. H. Golwin and

THE CHARMING SPRING FROCK

Here is a chic spring frock made of moire taffeta with Venice lace yoke. It is trimmed with plaited ribbon and a colonial bouquet of pastel shades.

COLORS WOMEN MAY WEAR

Black Becoming to Those of Fair Complexion; Blue Flattering Shade; Pink, Youthful.

There is an idea very general among women that wearing black has an aging effect on the appearance, but this is far from the case. Naturally with black, as with every other shade, a great deal depends upon individual coloring, but a fair woman, provided her complexion is not sallow, often looks considerably younger in black than she would in some bright color. The material chosen should not, of course, be very thick and heavy, as heavy black materials are very somber-looking and therefore far from youthful in appearance.

With few exceptions, blue is the most flattering color any woman can wear, and unless she is unfortunate enough to have chosen the wrong shade a woman will always look younger in a blue gown than in any other color. Very fair women, with ash-blond hair, should choose the pale shades of blue, light tones of sage and gray-blue, while those with dark or golden-brown hair can adopt the deeper shades, royal and the lighter tones of navy-blue.

Green, especially in its brighter shades, is an aging color, and the only woman to whom it is really becoming is the auburn-haired. Any shade of yellow is apt to add to one's appearance of years, especially the deeper tones of orange and flame, therefore they are only for the decidedly youthful wearer.

Pale tones of pink are not only becoming but very youthful in effect, especially under artificial light.

Brown, which is often considered dull, is, if the right tone be obtained, rather inclined to look youthful; but when deciding on the exact shade the light in the hair should be taken into consideration. A russet-brown gown worn by a woman with similar tones in her hair is wonderfully becoming.

Before deciding on a color it is a good plan to drape a piece of the material round the head and notice whether it makes the eyes look brighter and brings out their color. If it does, you may safely wear it, knowing that you will be looking younger and prettier than usual; but if it appears to rob the eyes of their brilliancy discard it, no matter how pretty it may be or how well it may look on some one else.

Color for evening wear should be chosen in artificial light, and those for day use in broad sunshine, for it is quite useless selecting a "perfectly lovely shade" under circumstances for which it is not intended.

Some materials alter considerably in artificial light—especially taffeta and charmeuse—which takes on quite a different tint and appearance, when seen beneath electric light.

CAPES, VOGUE FOR CHILDREN

Garment in Fancy Knit Goods Comes in Solid Colors With Stripes That Contrast.

Wool capes for children in fancy knit goods are having a vogue at the present time. They are convenient for an extra wrap to slip on and off. They come in solid colors with stripes of a contrasting color and with a deep white brush wool collar. One pretty model with sleeve holes is in pink with white collar, cuffs and lapels, and a little simple embroidery on each of these.

New for spring for the little people is a three-piece knicker suit. It differs from the winter suit, which has the bifurcated lower garment, full length, fastened with straps under the feet. The newer suits have real knickers finished at the knee with a tiny cuff with buttons. There is a sweater and skull cap. They are pretty things and come in the more solid and useful colors, among them the Harding blue.
