

CONCORD PULLET

SETS NEW RECORD

Concord, April—Concord lays claim to one of the champion chickens of the world, a pullet that has been raised by Odoardo Pentuff, daughter of Rev. and Mrs. J. R. Pentuff. The pullet, according to her owner, during the first seven days of April laid 17 eggs.

The egg-laying record of the pullet, called "Miss Twitty" because of a broken tail suffered while a biddy is vouched for by Mr. and Mrs. Pentuff and their daughter. The chicken is a house hold pet and many of her eggs were laid in the house on pillows. Some time ago, however, when Mr. Pentuff noticed that the hen was laying several times a day he placed her in a pen, locked her in and placed the key in his pocket. During the time she has been under lock and key, the hen has laid several times each day. Mr. Pentuff says.

GETTING A MATCH

Charlie (to sales girl)—"Have you a nice brown tie to match my eyes?"
Sadie—"No but we have nice soft hats to match your head."

SALESMANSHIP

New Assistant—"Gentleman asks if this flannel shirt will shrink?"
Proprietor—"Does it fit him?"
"No, it's too large."
"Yes, of course it shinks."

A MATTER OF LETTERS

Teddy and his friend were out to tea.
"Do you like tea?" breathed the sweet little thing.
"Yes, I do; but I like the next letter better." And then she blushed.

MONEY IS THE MASTER KEY

When you have found the money to pay competent teachers fair salaries for at least nine months service, and money to give the children comfortable schoolhouses with proper equipment, then you may begin the real work of country school reorganization. Money is the Master Key which will unlock the chief problems of rural education.

THE SECRET OF BAKING GOOD BISCUITS

The ability of a housewife as a cook is very often judged by the biscuits she makes, but they are really very simple to make. If the materials used are of the best, the recipe followed carefully and measurements are made accurately, only a little experience is required to produce excellent biscuits.

The principal requirement in making baking powder biscuits is, of course, that a reliable brand of baking powder is used correctly, that the ingredients be mixed quickly, and not so much as to make a tough biscuit. Too stiff a dough should also be avoided.

When mixing fat into a dough such as biscuits, it is preferable to add the fat in solid form and mix into the dry ingredients, either with a knife or with the tips of the fingers.

Baking powder is used in place of yeast, to make a flour mixture rise. When the mixture is of liquid and a good, plain, straight flour, and is stiff enough to knead, it is called a dough. Bread dough, biscuit dough and pie dough are examples of this degree of stiffness.

A biscuit dough can be used in making many delicious variations. By adding grated cheese to flour, a delightful change to serve with salads is the result. Roll these biscuits thinner and cut smaller than the usual biscuits. Thinly rolled biscuit dough sprinkled with sugar and sliced bananas, rolled

and baked as a jelly roll, makes an excellent dessert. Serve with a lemon sauce.

Tiny, thin biscuits may be split, buttered and served with tea, while larger ones may be served with breakfast or luncheon. In order to utilize left over biscuits of this kind, they may be split, and toasted or dipped quickly into boiling water and baked in a quick oven until the surface is dry.

When you bake, do bake good biscuits—don't waste time on inferior products. A good flour and a reliable baking powder, a hot oven, and your family will appreciate your efforts. Try the recipes as given out by the Calumet Baking Powder Company of Chicago.

TEXACO FILLING STATION HAS RECORD DAY

The record as established by the Texaco Filling Station here recently goes to show the amount of traffic in and out of our city. According to Mr. Peel, one of the proprietors, the station sent away 175 satisfied customers during the day. Out of the 175 90 per cent were cash customers, the other ten were free customers securing air and water and minor adjustments. There were no charge customers during the day according to Mr. Peel.

We have not interviewed the Standard station, but we guess its record to be equally as good as that of the Texaco station. With the amount of gas and oils being sold by these two stations there is no doubt out of the amount a great deal is sold to travelers passing through, but the larger amount is sold to local patrons.

STRAW HAT SEASON MAKES ITS APPEARANCE

Although it was of a weak nature, the straw hat season made its appearance here Sunday with Messrs. Kelly and "Luke" Meadows leading. The day was not altogether appropriate as the wind was too strong and the sun not quite hot enough. There will, no doubt, be plenty of followers in the next few days.

If a business man, or woman, wishes to invest in a paying enterprise, build a modern swimming pool and run it on business lines.

WANTED

Every Property Owner to use L. & M Semi Paste Paint and make his own Paint for \$2.82 per gallon. See our advertisement in this paper and note a gallon costs nothing if not satisfactory.

Insects are just about the worst agricultural people to face, a writer for a farm publication has declared, and certainly there is no insect problem facing a farmer that is more serious than the boll weevil problem to the cotton farmer, unless he applies correct and proven methods of control. It is impossible to eradicate the boll weevil, it is believed, but by the use of the government method of poisoning with calcium arsenate the insect can be controlled and a profitable crop made.

It will pay to poison, experts say, if the weevils are injuring the crop seriously; if the land is sufficiently fertile to yield at least one third of a bale to the acre with weevil injury eliminated; if the farming organization is such that applications of poison at the right time and in the right manner are assured, and if the farmer is willing to spend the amount necessary to provide an adequate supply of dusting machinery and poison.

One pre-square poison application should be made wherever twenty or more boll weevils appear on an acre of young cotton, scientists say. The treatment should be applied at the first indication of squaring. Home mixed molasses-calcium arsenate mixture applied with a mop to the tips of the plants, or straight calcium arsenate in dust form applied either by machine or shaking the dust from a sack, are recommended at this stage.

The usual formula for the molasses mixture is as follows: 1 pound of calcium arsenate, 1 gallon of molasses, 1 gallon of water, or with extremely heavy infestation and with frequent rains, a stronger mixture containing 2 pounds of calcium arsenate, 1 gallon of table quality syrup and 1/2 gallon of water. The latter may give quicker and better control. Syrup should always be sweet or unfermented and the mixture should be applied within twenty four hours after mixing.

For the treatment of fruiting cotton the calcium arsenate dusting method is recommended in preference to late season applications of syrup mixtures or other liquid poisons yet tested. Dusting should begin when 10 per cent of the squares show weevil puncture and at least three applications of 5 to 7 pounds per acre should be given at four and five day intervals. Thereafter dust should be applied only as when needed to keep the infestation below 20 per cent until after a full crop of bolls has been set and become grown. Only machine ery built especially for dusting cotton should be used.

SHERIFF ROBERSON TO RUN AGAIN

TO THE DEMOCRATIC VOTERS OF MARTIN COUNTY:
I take this method of announcing myself a candidate before the Primary to be held on June 7th, 1924, for the nomination for the office of Sheriff of Martin County, and I desire to sincerely thank the people for their most loyal support in the past and to assure them if I am nominated and elected again, that I will give them good clean service.
H. T. ROBERSON.

FORDSON TRACTOR FOR SALE

that I have used one season, guaranteed to be in perfect mechanical condition. Practically as good as new. I have no further need for it and will sell it dirt cheap.
