

It's better because it's **DRY!**

1. A wet gas is an atomized mixture of gasoline vapor in which are suspended drops of raw gasoline.
2. These drops of raw gasoline resist the action of the spark and will not ignite.
3. Result: Destructive crankcase dilution—difficult starts—slow acceleration—sluggish power.

A lightning start on cold days—quick acceleration in heavy traffic—smooth power on the open road—that's exactly what you get with every tankful of the *new and better* Texaco Gasoline.

Here's a true high test gasoline which forms a dry gas in the combustion chamber of your engine. It

gives up all its power because it burns completely. Technically speaking, it has a lower "boiling point," lower "end point" and a "balanced distillation range."

Vaporizing where other gasolines only atomize, the *new and better* Texaco will raise your car into a new high level of performance.

THE TEXAS COMPANY, TEXACO PETROLEUM PRODUCTS

The *NEW* and *BETTER* **TEXACO GASOLINE**

1. The *new and better* Texaco Gasoline forms a dry gas—a vaporized mixture of gasoline and air.
2. This pure, dry gas responds instantly to the action of the spark.
3. Result: Lightning starts—rapid acceleration—smooth power.
